NASA SP-7011(281)

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 281)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in January 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA

Scientific and Technical Information Branch 1986
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I – XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $8.00 domestic; $16.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 153 reports, articles and other documents announced during January 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 1
Includes genetics.

Category 52 Aerospace Medicine 7
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 18
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 21
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 23
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1
Contract Number Index E-1
Report Number Index F-1
Accession Number Index G-1

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 281)

EXERCISE HYPERTHERMIA AS A FACTOR LIMITING PHYSICAL PERFORMANCE - TEMPERATURE EFFECT ON MUSCLE METABOLISM
S. KOZLOWSKI, Z. BRZEZINSKA, B. KRUK, H. KACIUBA-USCILKO, J. E. GREENLEAF (NASA, Ames Research Center, Moffett Field, CA; Polish Academy of Sciences Medical Research Center, Warsaw, Poland) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 766-773. Research supported by the Polska Akademia Nauk. refs

The effect of trunk cooling on the muscle contents of ATP, ADP, AMP, creatine phosphate (CrP), and creatine, as well as of glycogen, some glycolytic intermediates, pyruvate, and lactate were assessed in 11 fasted dogs exercised at 20 C on treadmill to exhaustion. Without cooling, dogs were able to run 57 min, and their rectal (Tre) and muscle (Tm) temperatures increased to 41.8 and 43.0 C, respectively. Cooling with ice packs prolonged the ability to run by 45 percent, and resulted in lower Tre (by 1.1 C) and Tm (by 1.2 C). Depletion of muscle content of total high-energy phosphates (ATP + CrP) and glycogen, and increases in contents of AMP, pyruvate, and lactate were lower in cooled dogs than in non-cooled dogs. The muscle content of lactiate correlated positively with TM. These results indicate that hypothermia accelerates glycolysis, and shifts the equilibrium between high- and low-energy phosphates in favor of the latter. The adverse effect of hypothermia on muscle metabolism may be relevant to the limitation of endurance. I.S.

A86-10107
CARDIAC RESPONSE OF SUBMAXIMAL EXERCISE IN DOGS SUSCEPTIBLE TO SUDDEN CARDIAC DEATH
G. E. BILLMAN (Oklahoma, University, Oklahoma City), P. J. SCHWARTZ (Ohio State University, Columbus), J P. GAGNOL (Milano, Universita, Milan, Italy), and H. L. STONE Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 890-897. refs
(Contract NIH-HL-33718; NIH-HL-32230)

RECOVERY IN SKELETAL MUSCLE CONTRACTILE FUNCTION AFTER PROLONGED HINDLIMB IMMOBILIZATION
R. H. FITTS and C. J. BRIMMER (Marquette University, Milwaukee, WI) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 916-923. refs
(Contract NAG2-212)

The effect of three-month hindlimb immobilization (IM) in rats on contractile properties of slow-twitch soleus (SOL), fast-twitch extensor digitorum longus, and fast-twitch superficial region of the vastus lateralis were measured after 0, 14, 28, 60, and 90 days of recovery on excized, horizontally suspended muscles stimulated electrically to maximal twitch tonsion. IM caused decreases in muscle-to-body weight ratios for all muscles, with no complete recovery even after 90 days. The contractile properties of the fast-twitch muscles were less affected by IM than those of the slow-twitch SOL. The SOL isometric twitch duration was shortened, due to reduced contraction and half-relaxation time, both of which returned to control levels after 14 days of recovery. The peak tetanic tension, P(O), g/sq cm., decreased with IM by 46 percent in the SOL, but recovered by the 28th day. The maximum shortening velocity was not altered by IM in any of the muscles. Thus, normal contractile function could recover after prolonged limb IM. I.S.

A86-10252
COMPARATIVE BIODYNAMIC RESPONSE OF TWO PRIMATE SPECIES TO THE SAME VIBRATIONAL ENVIRONMENT
A. R. SLONIM (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 945-955.
(Contract F33615-79-C-0509)

The impedance and transmissibility characteristics of primates undergoing vertical sinusoidal vibrations were studied and attempts were made to derive interspecies scaling laws to use the primate data to predict vibrational effects on humans. Accelerometers were placed on the spines and seats of the monkeys and baboons, who were sedated when exposed to varying frequencies of g-forces of 0.177-0.283. Impedance magnitude and phase and transmissibility between the seat and two spinal accelerometers were calculated. Both animal types were found to have vibrated out of phase with the seat. The results from the Rhesus monkeys were more convergent to scale values which could be used for humans (and chimpanzees) than were the baboon data. M.S.K.

A86-10254
ELECTROCARDIOGRAPHIC CHANGES IN SERIOUS DECOMPRESSION SICKNESS
D. R. LEITCH and J. M. HALLENBECK (Institute of Naval Medicine, Alverstoke Gosport, England; U.S. Navy, Naval Medical Research Institute; Uniformed Services University of the Health Sciences, Bethesda, MD) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 966-971. refs
(Contract NAVY TASK M0099,PN001,1151)

Electrocardiographic changes observed in 21 dogs suffering from spinal cord decompression sickness (DCS) are described. Changes seen included P wave peaking and P-R depression compatible with right heart strain; S-T segment and T wave changes suggestive of myocardial ischemia; and ventricular arrhythmias ranging from unifocal premature ventricular contractions to ventricular tachycardia. Compression therapy did not always restore the ECG changes promptly to normality. The changes are discussed in association with concurrent physiological events. These included pulmonary hypertension, systemic hypertension and hypotension, and cerebral DCS. Possible mechanisms ranging from local cardiac DCS or coronary gas embolism to autonomic nervous system disturbances arising from cerebral and spinal cord DCS are reviewed. It is concluded that ECG recordings should be made more often when treating clinical DCS. Author

A86-11802
LIFE AT HIGH TEMPERATURES
T. D. BROCK (Wisconsin, University, Madison) Science (ISSN 0036-8075), vol. 230, Oct. 11, 1985, p. 132-138. NSF-supported research. refs

The types, molecular structure and metabolic activity of bacteria which can live at elevated temperatures, even beyond the boiling point of water, are discussed. The upper temperature limit for life is known to reside between 110-250 C. Prokaryotes can grow above 70 C, eukaryotes up to 60 C, and autotropic organisms above 73 C. The latter exploit inorganic energy sources such as sulfide, elemental sulfur and ferrous iron. Only members of the Archaebacteria live in regimes over 90 C. Proteins with enhanced thermal stability have exhibited extra salt bridges between portions of the folded molecules; however, the protein forming mechanism is thought to be responsible for thermostability. Several possible biotechnological applications of the high-temperature bacteria for industrial purposes are explored. M.S.K.

NEW PERSPECTIVES ON BACTERIAL FERREDOXIN EVOLUTION
D. G. GEORGE, L. T. HUNT, L.-S. L. YEH, and W. C. BARKER (National Biomedical Research Foundation, Washington, DC) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 20-31. refs
(Contract NASW-3954; NIH-GM-08710; NIH-RR-01821)

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins. G.R.

PHYLOGENETIC ORIGINS OF THE PLANT MITOCHONDRION BASED ON A COMPARATIVE ANALYSIS OF 5S RIBOSOMAL RNA SEQUENCES
E. VILLANUEVA, N. DELIHAS (New York, State University, Stony Brook), K. R. LUEHRSEN, G. E. FOX (Houston, University, TX), and J. GIBSON (Cornell University, Ithaca, NY) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 46-52. refs
(Contract NSF PCM-83-02-127; NSG-7440)

The complete nucleotide sequences of 5S ribosomal RNAs from Rhodocyclus gelatinosa, Rhodobacter sphaeroides, and Pseudomonas cepacia were determined. Comparisons of these 5S RNA sequences show that rather than being phylogenetically related to one another, the two photosynthetic bacterial 5S RNAs share more sequence and signature homology with the RNAs of two nonphotosynthetic strains. Rhodobacter sphaeroides is specifically related to Paracoccus denitrificans and Rc. gelatinosa is related to Ps. cepacia. These results support earlier 16S ribosomal RNA studies and add two important groups to the 5S RNA data base. Unique 5S RNA structural features previously found in P. denitrificans are present also in the 5S RNA of Rb. sphaeroides; these provide the basis for subdivisional signatures. The immediate consequence of obtaining these new sequences is that it is possible to clarify the phylogenetic origins of the plant mitochondrion. In particular, a close phylogenetic relationship is found between the plant mitochondria and members of the alpha subdivision of the purple photosynthetic bacteria, namely, Rb. sphaeroides, P. denitrificans, and Rhodospirillum rubrum. Author

TESTOSTERONE AND MUSCLE HYPERTROPHY IN FEMALE RATS
F. E. KUHN and S. R. MAX (Maryland, University, Baltimore) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, July 1985, p. 24-27. Research supported by the University of Maryland. refs
(Contract NAG2-100)

The effects of chronic treatment with testosterone propionate (TP) on compensatory muscle hypertropy in female rats are examined. The 48 female rats were placed in one of four test groups: (1) no overload (synergist removal), no TP, (2) overload, no TP, (3) no overload + TP, and (4) overload + TP. The technique used to administer the TP is described. The preparation of the plantaris muscle, the analysis of pyruvate oxidation and the determination of malate and lactate dehydrogenases and the noncollogen protein are explained. The results which reveal the effect of overload and TP on body weight, noncollogen protein concentration, lactate and malate dehydrogenase activities, and pyruvate oxidation are presented and discussed. It is concluded that in terms of body weight, protein content, pyruvate, glycolysis,

and oxidative metabolisms chronic TP treatments do not change compensatory muscle hypertropy. I.F.

A86-12378
OPPOSING HEMODYNAMIC EFFECTS OF SUBSTANCE P ON PULMONARY VASCULATURE IN RABBITS
G. S. WORTHEN, R. S. GUMBAY, D. T. TANAKA, and M. M. GRUNSTEIN (National Jewish Hospital and Research Center; Colorado, University, Denver) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Oct. 1985, p. 1098-1103. refs
(Contract NIH-HL-25165)

The effects of substance P (SP) on rabbit pulmonary vasculature is investigated, and some of the mechanisms involved are elucidated. The net response of the vasculature is found to be dose-dependent vasoconstriction. The vasoconstrictor response appears to be mediated in part by the generation of vasoconstrictor prostaglandins and thromboxanes. A cholinergically mediated vasodilator which is activated by SP may well represent a neuromodulatory role of SP in acetylcholine release. C.D.

A86-12380*
BIOCHEMICAL RESPONSE TO CHRONIC SHORTENING IN UNLOADED SOLEUS MUSCLES
S. R. JASPERS, J. M. FAGAN, and M. E. TISCHLER (Arizona Health Sciences Center, Tucson) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Oct. 1985, p. 1159-1163. refs
(Contract NAGW-227; NIH-AM-28647)

One leg of tail-casted suspended rats was immobilized in a plantar-flexed position to test whether chronic shortening of posterior leg muscles affected the metabolic response to unloading. The immobilized plantaris and gastrocnemius muscles of these animals showed approximately 20 percent loss of muscle mass in contrast to simply a slower growth rate with unloading. Loss of mass of the soleus muscle during suspension was not accentuated by chronic shortening. Although protein degradation in the isolated soleus muscle of the plantar-flexed limb was slightly faster than in the contralateral free limb, this difference was offset by faster synthesis of the myofibrillar protein fraction of the chronically shortened muscle. Total adenine nucleotides were 17 percent lower (P less than 0.005) in the chronically shortened soleus muscle following incubation. Glutamate, glutamine, and alanine metabolism showed little response to chronic shortening. These results suggest that, in the soleus muscle, chronic shortening did not alter significantly the metabolic responses to unloading and reduced activity. Author

LIFE SCIENCES RESEARCH ON THE SPACE STATION: AN INTRODUCTION
Sep. 1985 18 p refs
(NASA-TM-86836; REPT-85408; NAS 1.15:86836) Avail: NTIS HC A02/MF A01 CSCL 06B

The Space Station will provide an orbiting, low gravity, permanently manned facility for scientific research, starting in the 1990s. The facilities for life sciences research are being designed to allow scientific investigators to perform research in Space Medicine and Space Biology, to study the consequences of long-term exposure to space conditions, and to allow for the permanent presence of humans in space. This research, using humans, animals, and plants, will provide an understanding of the effects of the space environment on the basic processes of life. In addition, facilities are being planned for remote observations to study biologically important elements and compounds in space and on other planets (exobiology), and Earth observations to study global ecology. The life sciences community is encouraged to plan for participation in scientific research that will be made possible by the Space Station research facility. Author

LSRO/ONR AD HOC REVIEW PROCESS Annual Progress Report, 1 May 1984 - 30 Apr. 1985
13 Jun. 1985 14 p
(Contract N00014-83-C-0196)
(AD-A156590) Avail: NTIS HC A02/MF A01 CSCL 06A

This annual progress report covers the ad hoc review process. Efforts are continuing to increase the number of peer reviewers who are experienced in the LSRO/ONR review process. The LSRO/FASEB Proposal Rating Form, the form used for the ad hoc peer review evaluation activity, has been reorganized so that it can, if required, be used by all programs of the Biological Sciences Division. The LSRO Oversight Panel on the Office of Naval Research Molecular Biology Program has continued to function with further refinement. In performing evaluations of certain aspects of the Molecular Biology Program, selected members of the LSRO Oversight Panel attended a meeting with selected contractors of the Molecular Biology Program whose research focuses on biotechnology and protein engineering. Non-contract Activities; Contract Problems Encountered and Resolved; Review Process Time; Contract Modifications; LSRO Oversight Panel Reorganization are discussed. GRA

KINETICS OF BIOLOGICAL FERROUS IRON OXIDATION
P. I. WICHLACZ and H. OLEM 1985 15 p refs Presented at the 114th AIME Ann. Meeting, New York, 24 Feb. 1985; sponsored in cooperation with Society of Mining Engineers Prepared in cooperation with Tennessee Valley Authority, Chattanooga
(Contract DE-AC07-76ID-01570)
(DE85-014616; EGG-M-27484; CONF-850211-12) Avail: NTIS HC A02/MF A01

A mathematical model of growth and ferrous iron oxidation for attached bacteria was applied to rotating biological contactor (RBC) units treating acidic mine drainage. The model describes attached bacterial growth as a saturation function, where the rate of substrate utilization is determined by a maximum substrate oxidation rate constant, a half saturation constant, and the concentration of substrate within the RBC. The maximum oxidation rate constant was proportional to flow rate and the substrate concentration in the reactor varied with influent substrate concentration. The model was tested at three separate sites and with three different size RBC units. The ability of the model to predict the rate of iron oxidation under all test conditions was significant. The accuracy of the model was found to be affected by unit size and vary with specific test site. DOE

SOMATIC CELL AND MOLECULAR GENETICS APPROACH TO DNA REPAIR AND MUTAGENESIS
L. H. THOMPSON 14 Jun. 1985 10 p Presented at the 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(Contract W-7405-ENG-48)
(DE85-014181; UCRL-92834; CONF-8506137-4) Avail: NTIS HC A02/MF A01

In the CHO cell line, UV-sensitive mutants representing five genetic complementation groups were identified. Mutants from each of these groups were shown to be defective in performing the incision step of repair after exposure to UV. It is questioned whether the large number of complementation groups of xeroderma pigmentosa mutations of these groups all correspond to single gene loci. The same issue applies to the five groups of UV-sensitive CHO mutants. The human karyotype of the genes that complement the defects in the CHO mutants were localized. By marking CHO/human cell hybrids under the appropriate selective conditions, each of the complementing human genes are mapped. The mutation in strain UV20 (Group 2) was complemented by human chromosome 19. Preliminary evidence suggests that UV5 may also be complemented by human chromosome 19 while each of the other 3 groups involves a different human chromosome. Mutant EM9 is also complemented by a gene on chromosome 19. DOE

BIOTECHNOLOGY: SCIENCE AND PRACTICE
A. ILYALETDINOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 19-21 18 Sep. 1985 Transl. into ENGLISH from Kazakhstansk. Pravda (Alma-Ata), Jun. 1985 p 3
Avail: NTIS HC A06

The development of scientific research and the introduction of biotechnology's achievements into production are discussed. The development of an antibiotics industry, based upon the use of pure microorganism cultures under sterile conditions, and a microbiological industry, producing feed protein for animal husbandry and microbiological means for fighting agricultural pests is outlined. Industrial microbiology is related. A technology for culturing feed yeasts directly in feed shops by using media containing starch preliminary subjected to fermentation with the malt of germinated grain--barley or other cereal grains is proposed. The method of fermenting starch-containing stock with malt amylase, is turned into feed production. Special species of yeast, produced by our staff members, are used to obtain the feed protein. The contributions of microbiology and virology to the development of biological Science and Scientific and technical progress are outlined. E.A.K.

SHORT TERM HEAT EFFECT ON ADRENO- AND CHOLINO-SENSITIVITY OF RAT'S SMALL INTESTINE Abstract Only
K. A. MEZIDOVA, B. N. MANUKHIN, and F. F. SULTANOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 70 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 2, Feb. 1985 p 195-199
Avail: NTIS HC A06

The dynamics of adreno and choline sensitivity of the smooth muscles of rat's small intestine were studied at various times after exposure to 45 C for 30 or 60 minutes. The body temperature of test animals increased rapidly under the influence of the external temperature. Sensitivity of the intestine to noradrenaline also increased under conditions of hyperthermia, following the pattern of body temperature. Sensitivity of acetylcholine was less initial heating resulted in a slight decrease followed by an increase after a 1 hr exposure; after termination of the experiment, the sensitivity remained below that of control values for about 5 days. It is

shown that changes in adrenoreceptor sensitivity could be controlled by the altering of environmental temperature. E.A.K.

REACTION OF RABBIT RESPIRATION SYSTEM TO HYPOXIC STIMULUS IN NITROGEN-OXYGEN MEDIUM AT ELEVATED PRESSURE Abstract Only
Z. A. DONINA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 75 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 316-319 Original language document announced in IAA as A85-33968
Avail: NTIS HC A06

Respiratory changes in exposed animals to increasing hypoxia was investigated on rabbits under normal conditions and in nitrogen-oxygen mixture at elevated pressure. While remaining at atmospheric pressure in air, the oxygen pressure in arterial blood dropped gradually during recycled breathing from a bag, resulting in hyperventilation. The largest increase in respiratory volume is observed when oxygen pressure in blood drops to 44.9 mm Hg; this occurred while the respiration becomes deeper and more frequent. During hyperbaria, the requency of breathing decreases while the depth of the respiration increases. The increase in respiratory volume and lung ventilation is accompanied by increased pressure in the lungs and by more labored breathing.

INDICES OF BLOOD OXYGEN TRANSPORTING PROPERTIES AND ERYTHROPOIESIS IN RATS AFTER PROLONGED STAY IN NITROGEN-OXYGEN MIXTURE AT ELEVATED PRESSURE Abstract Only
A. M. VOLZHSKAYA, G. V. TROSHIKHIN, and T. Y. SHUMILOVA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 76 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 320-323
Avail: NTIS HC A06

Principal blood indices determining the oxygen transport properties and the intensity of erythropoiesis in rats exposed for different times to elevated pressure in a mixed nitrogen-oxygen atmosphere were investigated. After decompression, the animals showed increased concentration of hemoglobin, elevated levels of hematocrit and higher quantities of erythrocytes, which persisted for 4 hrs; after 24 hrs the values returned to normal. The concentration of 2,3-diphosphoglycerate in erythrocytes increased and remained that way for 72 hrs. The erythropoietic activity was intensified through the 72 hrs. Mechanisms aimed at improving delivery of oxygen to the tissue and representing compensatory reactions to hypoxia are indicated. E.A.K.

HOMOCARNOSIN IN RAT BRAIN DURING ADAPTATION TO COLD Abstract Only
T. I. BONDARENKO, A. A. KRICHEVSKAYA, and G. N. KOSHCHIY *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 76 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 333-336
Avail: NTIS HC A06

Homocarnosin (gamma-aminobutyryl-1-histidine) is a peptide neuromediator of the central nervous system; its content in white rate brain was studied during cold adaptation process lasting from 1 to 45 days. It was shown that the homocarnosin level dropped progressively with exposure to this temperature. During the stress period, peroxide oxidation intensified and the hemoglobin in serum was elevated. Stimulation of the peroxide oxidation damaged some enzymes and the structure of the membranes and some of their properties were altered. Adaptation time to the cold varied in different animals. At that time the level of homocarnosin in cold-adapted animals was 56% lower than controls. The exposure to low temperature led to decrease in homocarnosin-carnosynthetase activity which explained the lower levels of homocarnosin in cold adapted animals. E.A.K.

EFFICIENCY OF MUSCULAR WORK IN WHITE RATS DURING ADAPTATION TO COLD Abstract Only
Y. Y. TKACHENKO and M. A. YAKIMENKO *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 77 18 Sep, 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 337-341
Avail: NTIS HC A06

The relationship between heat production and muscle work performed under various work loads by adult rats adapted to a cold medium was investigated to determine the maximum of work ability and its energetic optimum. Temperature increase in the contracting muscle per unit work (delta/A) was plotted as a function of the magnitude of completed work by cold-adapted and control rats. It is shown that work effectiveness changed with adaptation in cold: optimum performance was achieved by cold adapted animals with loads of 200 to 250 g as compared to controls which showed a 320 to 380 g loads. E.A.K.

INTRADIURNIAL ORGANIZATION OF WAKEFULNESS-SLEEP SEQUENCE AND ENERGY METABOLISM IN RATS EXPOSED TO LOW AMBIENT TEMPERATURE Abstract Only
V. S. SAZONOV and Y. F. PASTUKHOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 77 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 342-347 Original language document announced in IAA as A85-36611
Avail: NTIS HC A06

Sleep characteristics were studied as a function of energy exchange under conditions of acute and chronic exposure to low ambient temperature. Two sleep phases were identified in all animals regardless of the temperature; (1) slow wave sleep, further subdivided into surface and deep subgroups; and (2) paradoxial sleep. Three control rats were used and five cold-adapted ones. At low ambient temperature, controls had a lighter, shorter and often interrupted sleep. After cold adaptation daily sleeping period increased both at low and ambient temperatures. It is assumed that after prolonged cold the sleep initiation mechanisms continue to be active, while those of the sleep development arrested.

EFFECT OF COLD ON BRAIN SEROTONIN SYSTEM AND PLASMA CORTICOSTEROID LEVEL IN DIFFERENT STRAINS OF MICE Abstract Only
L. A. KORYAKINA, A. V. KULIKOV, M. Y. FIGUROVA, and N. K. POPOVA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 78-79 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 3, Mar. 1985 p 422-427
Avail: NTIS HC A06

The activity of tryptophan hydroxylase in brain and was evaluated the plasma corticosteroid levels in male mice while exposed to +4 C for 1 or 6 hrs. It is shown that the activity of tryptophan hydroxylase dropped during the cooling process, and it is assumed that the activity of the entire serotonin system in brain lowered. Decreased synthesis of serotonin supported temperature homeostasis and increased the resistance of animals to cold. The changes in the serotonin system were of an adaptive nature. No linear relationship is noted between the degree of activation of hypothalamo-hypophyseal-adrenal systems and the drop in body temperature of the experimental animals. It is assumed that the observed changes in the synthesis of biogenic amine represent a specific reaction of the body to the cooling process and are caused by participation of brain serotonin in central thermoregulation. DYNAMICS OF GENERAL RESISTANCE OF RATS DURING READAPTATION PERIOD AFTER TRAINING IN ALTERED GAS ENVIRONMENT Abstract Only
Y. Y. ZVERKOVA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 79 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Zh. SSSR Im. I. M. Sechenov (Leningrad), v. 71, no. 4, Apr. 1985 p 523-526
Avail: NTIS HC A06

The duration of retained resistance of animals to external conditions was studied on 330 white rats as a function of adaptive training and specific conditions of altered gas medium. The adaptation training to combined hypoxia and hypercapnia or to pure hypoxia lasted 15 and 30 days for each modality. It was shown that a 15-day training by either of above methods had an insignificant effect on high altutide resistance. The animals exposed to 30 day treatment showed significant increase in resistance to acute hypoxia. The high altitude resistance was higher at all times in the groups exposed to a combination of hypoxia and hypercapnia training. This type of resistance lasted for up to 60 days after thre readaptation period. E.A.K.

CONTROLLED ENVIRONMENT LIFE SUPPORT SYSTEM: CALCIUM-RELATED LEAF INJURIES ON PLANTS Final Report, May 1981 - Apr. 1984
T. W. TIBBITTS 1985 44 p refs
(Contract NCC2-136)
(NASA-CR-176288; NAS 1.26:176288) Avail: NTIS HC A03/MF A01 CSCL 06C

A calcium related injury in lettuce termed tipburn was the focus of this study. It affects the young developing leaves as they become enclosed during head formation. It is a good model system to study because the injury can be induced with good predictability and lettuce is one of the crops chosen by the CELSS program for concentrated study. Investigations were undertaken to study a number of different procedures, that would have the potential for encouraging movement of calcium into the young developing leaves and to study the time course and pattern of calcium accumulation in developing leaves to provide a basis for developing effective control procedures for this injury. The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System. (Contract NCC2-85)
(NASA-CR-176286; NAS 1.26:176286) Avail: NTIS HC A02/MF A01 CSCL 06C

Oxygen is not only one of the most abundant elements on the Earth, but it is also one of the most important elements for life. In terms of composition, the feature of the atmosphere that most distinguishes Earth from other planets is the presence of abundant amounts of oxygen. The first forms of life may have been similar to present day anaerobic bacteria such as clostridium. The relationship between prokaryotes and eukaryotes, if any, has been a topic of much speculation. With only a few exceptions eukaryotes are oxygen-utilizing organisms. This research eukaryotes or eukaryotic biochemical processes requiring oxygen, could have arisen quite early in evolution and utilized the small quantities of photocatalytically produced oxygen which are thought to have been present on the Earth prior to the evolution of massive amounts of photosynthetically-produced oxygen. AN ATROPINIZED HEAT-STRESSED RAT MODEL: ANTICHOLINERGIC AND ANTICHOLINESTERASE DRUG POTENCY
C. B. MATTHEW, R. W. HUBBARD, and R. P. FRANCESCONI Jul. 1985 18 p
(Contract DA PROJ. 3M1-62734-A-875)
(AD-A157620; USARIEM-M-34/85) Avail: NTIS HC A02/MF A01 CSCL 06O

We have developed an animal model to evaluate the thermoregulatory effects of several anticholinergic drugs, particularly in hot environments. Our previous work on this model demonstrated that atropine, the prototype of muscarinic anticholinergic drugs, produces a dose-dependent increase in heating rate of heat-stressed rats that lasted for 3 hours after administration. By comparing the effects on heating rate of other anticholinergic drugs relative to the effects of atropine, we derived the following potency ratios: imipramine (0.004), amitriptyline (0.02), chlorpromazine (0.1), atropine (1); L-hyoscymaine (2), atropine methyl nitrate (4), and scopolamine (16). Additionally, we tested the ability of carbamates to reduce the elevated heating rate of atropinized rats as a measure of anticholinesterase efficacy, resulting in the following relative potencies: neostigmine (8), physostigmine (2) and pyridostigmine (1). Our results indicate that this is a useful model to evaluate potential drug-exacerbated increases in body temperature in hot environments. GRA

POSITIVE GENETIC HAZARD PREDICTIONS FROM SHORT-TERM TESTS HAVE PROVED FALSE FOR RESULTS IN MAMMALIAN SPERMATOGONIA WITH ALL ENVIRONMENTAL CHEMICALS SO FAR TESTED
W. L. RUSSELL 1985 9 p refs Presented at the 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(Contract DE-AC05-84OR-21400)
(DE85-013640; CONF-8506137-1) Avail: NTIS HC A02/MF A01

Eleven chemicals for which there has been considerable human exposure were studied by the mouse specific-locus method because of their positive mutagenic action in other test systems. All were positive in the Drosophila sex-linked recessive lethal test, and in mammalian somatic cells proved muagenic. In mouse stem-cell spermatogonia none of the chemicals, even at maximum tolerated dose, has given a specific-locus mutation frequency higher than the control, and the mutation frequency for all eleven combined (12 mutations in 298,502 offspring) was actually less than the historical control. Absence of mutation induction cannot be attributed to: (1) failure of the chemicals to reach the testis (10 of them are known to reach the testis in active form), (2) small sample size (the samples are large), and (3) insensitivity of

the test (the test is not insensitive, a positive control gave a mutation frequency 132 times higher than the historical control). It is concluded that mammalian stem-cell spermatogonia have an effective repair capability. DOE

DETECTION OF CHROMOSOMAL ABNORMALITIES IN HUMAN SPERM
B. BRANDRIFF, L. GORDON, A. K. ASHWORTH, G. WATCHMAKER, and A. V. CARRANO 19 Jun. 1985 9 p refs Presented at the 4th Intern. Conf. on Environ. Mutgens, Stockholm, 24 Jun. 1985
(Contract W-7405-ENG-48)
(DE85-014178; UCRL-92835; CONF-8506137-3) Avail: NTIS HC A02/MF A01

A new technology developed by Rudak, et al., for examining the chromosomal constitution of human sperm through fusion with eggs from the Syrian hamster was used to obtain baseline data on the types and frequencies of aberrations in sperm of normal men. The frequency of structural aberrations in 2724 sperm chromosome karyotypes from the 13 healthy non-exposed donors ranged from 2 to 15.8%, demonstrating significant interindividual variability. The most frequently occurring aberrations were chromosome breaks, followed by acentric fragments, chromatid exchanges, chromatid breaks, dicentrics and translocations, chromosome deletions and duplications, inversions, and chromatid deletions. Two donors previously reported had one cell each with multiple chromatid exchanges and breaks. In addition, the oldest donor, AA, had 5 cells out of 124 examined with multiple breaks and rearrangements too extensive to completely identify. DOE

RELATIONSHIP BETWEEN ALKYLATION SITES AND INDUCTION OF DOMINANT LETHALS AND HERITABLE TRANSLOCATIONS IN MICE
W. M. GENEROSO 1985 8 p refs Presented at the 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(Contract DE-AC05-84OR-21400)
(DE85-014309; CONF-8506137-6) Avail: NTIS HC A02/MF A01

Production of dominant lethals and heritable translocations is determined by the degree of stability of alkylation products within the chromosome. If repair is not effected in the fertilized eggs and the alkylation products persist to the time of pronuclear chromosome replication or early cleavage divisions, they lead to chromatid-type aberrations and eventually to lethality. The production of heritable translocations requires a transformation of unstable alkylation products into suitable intermediate lesions. These lesions are converted into chromosome exchanges prior to the time of pronuclear chromosome replication. Dominant lethals result from both chromatid and chromosome-type aberrations while heritable translocations results primarily from the latter type. It is inherent that the production of chromosome and chromatid-type aberrations by a chemical mutagen are not necessarily mutually exclusive. E.A.K.

N86-11836# Oak Ridge National Lab., Tenn.
INFORMATION FROM SPECIFIC-LOCUS MUTANTS ON THE NATURE OF INDUCED AND SPONTANEOUS MUTATIONS IN THE MOUSE
L. B. RUSSELL 1985 12 p refs Presented at 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(DE85-014313; CONF-8506123-7) Avail: NTIS HC A02/MF A01

Genetic and molecular analyses of mutations are increasing the qualitative capabilities of the specific-locus test (SLT). Some mutations are found to be deletions of large numbers of genes, including some that control survival at various developmental stages, neurological functions, enzyme syntheses, etc. Smaller (including possibly single-gene) deletions are also detected. A third group of SLT mutations represents intragenic lesions. For at least three of the loci, mutations may now be qualitatively grouped on the basis of simple phenotypic findings. Type of mutagen and germ-cell stage exposed strongly influence the nature of the lesions. The qualitative information from SLT results makes possible conclusions about relative potential harmfulness of different types of exposures that may yield equal mutation rates, about difference between induced and spontaneous mutations, etc. It also identifies genetic material suitable for basic studies. TERATOGENIC EFFECTS OF MICROWAVE RADIATION Final Report, 1980 - 1985
M. E. OCONNOR and R. STRATTAN May 1985 51 p
(Contract EPA-68-02-3453)
(PB85-207462; EPA-600/1-85-007) Avail: NTIS HC A04/MF A01 CSCL 06T

Pregnant CF-1 mice was exposed to 2450-MHz CW microwave irradiation at power densities of 0, 10, or 30 mW/sq. cm for 6 hours daily from gestational day 1 through day 18. All exposures occurred in an anechoic chamber maintained at 50% relative humidity with air temperature of 22C. A group of pregnant colon cage-control mice was maintained for each of the three exposure groups. Teratogenic examinations were performed on day 18 following Caesarean section of the maternal subject. Every third fetus was stained with alazarin red and examined for skeletal abnormalities. No significant differences between the groups observed for fetal body mass, fetal brain mass, resorption, live fetuses, gross abnormalities, or skeletal abnormalities.

CONTROL OF EXERCISE HYPERPNEA DURING HYPERCAPNIA IN HUMANS
C.-S. POON and J. G. GREENE (North Dakota State University; U.S. Veterans Administration Hospital, Fargo; North Dakota, University, Grand Forks) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 792-797. Research supported by the American Heart Association. refs
(Contract NIH-HL-30794; NIH-RR-02142)

CO2-exercise interaction during exercise under controlled hypercapnia was examined in terms of ventilatory responses in eight male subjects during four sequential 5 min incremental treadmill runs from rest up to a maximum CO2 output, V(CO2). Arterial isocapnia was maintained by continual adjustment of the inspired P(CO2). The response in total ventilation, V(E), to exercise V(CO2) was linear at all levels of arterial P(CO2). Hypercapnia resulted in corresponding increases in both the slope and the intercept of the V(E)-V(CO2) curve, that were directly proportional to the rise in arterial P(CO2). Thus, concomitant hypercapnia and exercise af[illegible] the ventilatory response synergistically, suggesting positive int[illegible]action between these stimuli. The increased exercise sensitivity in hypercapnia is qualitatively consistent with the hypothesis that V(E) is controlled to minimize the conflicting challenges due to chemical drive and the mechanical work of breathing (Poon, 1983). I.S.

ENHANCED METABOLIC RESPONSE TO CAFFEINE IN EXERCISE-TRAINED HUMAN SUBJECTS
J. LEBLANC, M. JOBIN, J. COTE, P. SAMSON, and A. LABRIE (Universite, Laval, Quebec, Canada) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 832-837. refs

The effect of caffeine on resting metabolic rate (RMR) was investigated in eight trained and eight nontrained young male subjects. The ingestion of 4 mg/kg caffeine produced a greater increase of RMR in trained subjects. This effect was associated with a greater increase in plasma free fatty acids and a larger fall

in respiratory quotient, indicating an enhanced lipid oxidation following caffeine in exercise-trained subjects. An initial fall in plasma glucose was observed but only in trained subjects, and caffeine did not change plasma insulin in either group studied. Caffeine caused a significant fall in plasma norepinephrine and an increase in plasma epinephrine in both groups of subjects, but this action was significantly greater in trained subjects. It is suggested that the greater increase in RMR observed in trained subjects following caffeine ingestion is related to an enhanced lipid mobilization possibly produced by a greater epinephrine secretion and by subsequent increased lipid oxidation. HEADACHE AT HIGH ALTITUDE IS NOT RELATED TO INTERNAL CAROTID ARTERIAL BLOOD VELOCITY
J. T. REEVES, L. G. MOORE, R. E. MCCULLOUGH, R. G. MCCULLOUGH, G. HARRISON (Colorado, University, Denver; Colorado State University, Fort Collins) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 909-915. refs
(Contract NIH-HL-14985)

Internal carotid blood velocity (CBV) was measured by the Doppler ultrasound technique at 1600 m (Denver), and repeatedly up to 7 h at a simulated (430 Torr) altitude of 4800 m, in 6 subjects known to be susceptible to altitude-causing headaches (HA group) and in 6 other subjects without such history (C group). During the measurements of hypercapnic response in Denver, CBV was shown to increase linearly with end-tidal PCO2, confirming that the Doppler method could demonstrate an increase. All six subjects in the HA group developed severe headache at 4800 m, whereas in the control group, four subjects remained well, and two others developed moderate headache. CBV at 4800 m did not correlate with symptom development, arterial O2 saturation, or end-tidal P(CO2). In addition, neither CBV nor blood pressure were consistently elevated above the Denver baseline values. Thus, the cerebral blood flow does not appear to play a primary role in causing headache symptoms at high altitude. I.S.

AIRLINE PILOT DISABILITY - THE CONTINUED EXPERIENCE OF A MAJOR U.S. AIRLINE
G. W. HOLT, W. F. TAYLOR, and E. T. CARTER (Mayo Clinic; Mayo Foundation, Rochester, MN) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 939-944. refs

A statistical analysis is carried out of the results of pilot pre-employment screening by airline medical departments, along with a survey of the change of pilot disability rates over time. The survey covers 1832 pilots over the period 1975 to the end of 1982, including 368 pilots who underwent pre-employment screening. Of the screened pilots, 45 were unacceptable due to psychological reasons, 28 for nonpsychological characteristics. Cardiovascular diseases were the greatest cause of disability, indicating that attention be given to hyperlipidemia, smoking, glucose intolerance, hypertension and genetic background during screening. The study also revealed that the disability rates have decreased over time, although the cause(s) for the decrease(s) was not identified. M.S.K.

PERFORMANCE AND PHYSIOLOGICAL EFFECTS OF ACCELERATION-INDUCED (+GZ) LOSS OF CONSCIOUSNESS
J. O. HOUGHTON, D. K. MCBRIDE, and K. HANNAH (U.S. Navy, Naval Air Development Center, Warminster, PA; U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 956-965. refs

Eight humans underwent centrifugal tests in an experiment designed to quantify the levels of pilot performance skills during the three stages of loss of consciousness (LOC) recovery. The stages are unconsciousness, relative incapacitation, and normalization. Extensive physiological, sensory and audio instrumentation were used to monitor the subjects before, during and after centrifuge sessions which featured steadily increasign g-levels from 0.067-8.0 g. The subjects were required to perform spatial and verbal information processing tasks and produce vocal and motor responses. LOC occurred at 5.0-8.0 g. The results indicated that pilots will not reach normal performance levels for 2-3 min after recovery from LOC. No correlations were found between g-tolerance and LOC recoverability. M.S.K.

CARDIOVASCULAR DECONDITIONING DURING SPACE FLIGHT AND THE USE OF SALINE AS A COUNTERMEASURE TO ORTHOSTATIC INTOLERANCE
M. W. BUNGO, J. B. CHARLES, and P. C. JOHNSON, JR. (NASA, Johnson Space Center, Houston, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 985-990. refs

Results are reported of trials with oral hydration by astronauts before reentry of the Orbiter. The experiments were run to evaluate hydration as a means of offsetting the loss of lower body negative pressure experienced after several days in space. The rehydration was carried out by 17 astronauts who ingested salt tablets and water prior to the end of the first eight STS mission orbital phases; nine astronauts abstained. Pulse and blood pressure data were collected from 1-2 hr post landing. Measurements were also made of the extent of cardiac deconditioning and the response to orthostatic stress (standing). Ingestion of the salt tablets reduced the heart rate response to stress an average of 29 percent. The statistical significance of the difference has encouraged adoption of the salt tablet countermeasure as an operational procedure by Shuttle astronauts. M.S.K.

A86-10259
SERUM LEVELS OF ELEVEN STEROID HORMONES FOLLOWING MOTION SICKNESS
G. K. STALLA, H. G. DOERR, F. BIDLINGMAIER, W. G. SIPPEL, and W. VON RESTORFF (Luftwaffe, Flugmedizinisches Institut, Fuerstenfeldbruck; Muenchen, Universitaet, Munich; Kiel, Universitaet, West Germany) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 995-999. refs

Fifteen blindfolded male subjects were subjected to motion sickness-inducing trials in a study of the relationship between steroid hormonal responses and the severity of motion sickness (MS). The subjects executed upper body movements while rotating on a Baranyi chair at 72 deg/sec. Symptoms were recorded every 2 min in trials lasting up to 30 min to a point of intolerance. Blood samples were taken with a cannula inserted into the antebrachial vein. The levels of 11 hormones were monitored and the subjects were ranked in three groups according to MS tolerance. The rapid rise of hormones such as androstendione and 11-deoxycortisol in response to short exposure to MS-inducing situations showed promise as valid indicators of the severity of MS intolerance. M.S.K.

THERMOVISUAL INDICATORS OF BRAIN REACTIONS TO VISUAL STIMULI [TEPLOVIZIONNYE POKAZATELI REAKTSII MOZGA NA ZRITEL'NYE RAZDRAZHENIIA]
I. A. SHEVELEV, E. N. TSYKALOV, A. M. GORBACH, K. P. BUDKO, and G. A. SHARAEV (AN SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 538-543. In Russian. refs

A noninvasive thermovisual method was used to detect thermal reaction in the occitoparietal area of human brain cortex to stimulation of the eye with light from a photostimulator. The temporal, spatial, and temperature characteristics of the thermal effect were obtained by use of the AGA-780 thermovisor connected to a computer system. Possible mechanisms of the interrelationship between the visual stimuli and the thermal reaction of the human brain are discussed. I.S.

NEURONAL REACTIONS AND EVOKED POTENTIALS IN THE SUBCORTICAL BRAIN STRUCTURES IN THE PROCESS OF VISUAL RECOGNITION. I FORMULATION OF THE PROBLEM AND BASIC METHODS FOR ITS SOLUTION [REAKTSII NEIRONOV I VYZVANNYE POTENTSIALY V PODKORKOVYKH STRUKTURAKH MOZGA PRI ZRITEL'NOM OPOZNANII. I - POSTANOVKA ZADACHI I OSNOVNYE METODY EE RESHENIIA]
IU. D. KROPOTOV and V. A. PONOMAREV (AMN SSSR, Institut Eksperimental'noi Meditsiny, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 563-575. In Russian. refs

The problems of studying the neurophysiological processes taking place during visual perception are discussed, including the methods used and the results obtained. The effects of visual stimuli on neuronal impulses and evoked potentials were registered in patients during functional diagnoses with the use of implanted electrodes. It was demonstrated that the processes of visual perception induce neuronal activity in the nuclei of the thalamus and striopallidal system. The nature of these reactions depends on the type of activity initiated by the visual stimuli. A system of psychological tests is proposed for the analysis of characteristic responses in the human brain to somatosensory features of visual stimuli. I.S.

PRESTIMULUS EEG AND EVOKED POTENTIALS IN MAN DURING THE RECOGNITION OF A MEANINGFUL LIGHT STIMULUS [PREDSTIMUL'NYE EEG I VYZVANNYE POTENTSIALY CHELOVEKA PRI OPOZNANII ZNACHIMOGO SVETOVOGO STIMULA]
L. A. POTULOVA and IA. A. VASILEV (AN SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 580-585. In Russian. refs

EEG spectra for the motor and vision areas of the neocortex were recorded before and during exposure to digital light stimuli in order to determine what changes in the spectral correlation parameters of the prestimulus EEG and what components of the evoked potential (EP) accompany recognition of the light stimulus. It was found that correct recognition is manifested in an increase in the amplitude and a shortening of the latent period of the late component N 140 of the EP. A decrease in the relative number of slow waves and an increase in the number of fast waves in the background potential of the neocortex were recorded. A decrease in the correlation coefficient (cc) in the left hemisphere corresponded to an increase in the cc in the right hemisphere. I.S.

CHARACTERISTICS OF EXTERNAL RESPIRATION IN INHABITANTS OF THE NORTHEASTERN USSR [OSOBENNOSTI VNESHNEGO DYKHANIIA U ZHITELEI SEVERO-VOSTOKA SSSR]
L. N. MATVEEV, A. G. MARACHEV, A. N. KOZIN, S. A. KHARKOV, and I. Z. SHERES (AMN SSSR, Institut Morfologii Cheloveva; Moskovskii Medizinskii Stomatologicheskii Institut, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 634-640. In Russian. refs

The respiratory volume and rate parameters measured in 246 short-term and long-term residents of the northeastern USSR were compared to the corresponding features of 90 Moscow residents to determine the effects of residence in the far north on the respiratory system. A positive decline in the average values of respiratory rate parameters was found in the inhabitants of the northeast, compared to the Moscow inhabitants, leading to a decrease in the maximal efficiency in the gas exchange and to the reduction of the breathing reserve by one third. Subjects who lived in the northeast for more than 10 years exhibited alterations in functional parameters that indicate changes in lung parenchyma, resulting in a considerable decrease in breathing reserve. I.S.

THE EFFECT OF 24-HR SLEEP DEPRIVATION ON THE METABOLISM OF BIOGENIC AMINES [VLIIANIE 24-CHASOVOI DEPRIVATSII SNA NA OBMEN BIOGENNYKH AMINOV]
T. D. BOLSHSKOVA, S. A. MESHCHERIAKOVA, V. F. TIABENKOVA, N. I. ROMANOVA, IA. I. LEVIN (I Moskovskii Meditsinskii Institut, Moscow, USSR) et al. Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 652-656. In Russian. refs

Concentrations of catecholamines, serotonin, histamine, and their metabolites before, during, and after 24-hr sleep deprivation (SD), and after a night of restorative sleep were measured in the blood and urine of 10 healthy men. The excretion of all amines rose above the control levels after the sleepless night, indicating increased secretory activity in the system of biogenic amines. Chemical changes accompanied the increased levels of behavioral activity reported earlier (Vein et al., 1982; Levin, 1983). Most of the changes disappeared after the restoration period, except those of the metabolic indicators of serotonin and tryptophan, which showed lingering reductions in blood activities. It is suggested that this residual lingering effect of SD might be at the base of biological changes caused by frequently repeated periods of SD, which may lead to permanent pathological conditions. I.S.

ADAPTATION OF THE HUMAN ORGANISM TO THE REPEATED SHORT-TERM EXPOSURES TO A HOT ENVIRONMENT [ADAPTATSIIA ORGANIZMA CHELOVEKA K POVTORNYM KRATKOVREMENNYM VOZDEISTVIIAM ZHARKOI SREDY]
A. T. MARIANOVICH, V. D. BAKHAREV, V. S. BALANDIN, and V. G. NIKIFOROV (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, July-Aug. 1985, p. 684-686. In Russian. refs

Eight healthy subjects were exposed for 2 hr to 49 C ecactly 1 yr after five such 2-hr exposures, and their heat tolerance (HT) was compared to that found in the experiment of the previous year (Bakharev et al., 1983). HT was measured according to the criteria of rectal temperature, perspiration and heart rate, and according to the subjective evaluation of health and work efficiency. While the physiological effects of heat exposure did not change after a one-year period, the psychological indices pointed to better tolerance to the latest heat exposure than was found in the experiments of the previous year. It is suggested that the reason for this psychological adaptation might be the recognition by the subjects of the transient nature of the effects of short-term heat exposures experienced during the previous experiment. I.S.

A STUDY OF FUNCTIONAL ASYMMETRY OF PAIRED ORGANS IN AIRCRAFT PERSONNEL [ISSLEDOVANIE FUNKTSIONAL'NOI ASIMMETRII PARNYKH ORGANOV U LITS LETNOGO SOSTAVA]
V. A. BODROV and A. G. FEDORUK Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), July 1985, p. 50-52. In Russian. refs

Motor and sensory indicators of functional asymmetry were analyzed in flying and ground-based aircraft personnel for the purpose of determining the importance of these criteria in the selection of future aviators. While most subjects in all groups exhibited right-side (R) vision, hearing, and hand dominance, the flying personnel showed a higher number of the R dominance in hearing. Comparison of trainees and differently qualified pilots has shown the highest incidence of R dominance in hearing, vision, and hand functions in pilots of the first class. When pilots were divided into a relatively infrequently erring (IE) and often-erring (OE) groups, the former pilots exhibited a higher incidence of R dominance of hand, vision, and hearing, while the pilots in the OE group had relatively higher incidence of left-side dominance, indicating the importance of these tests in selection of trainees. A DIFFERENTIAL EVALUATION OF THE MECHANISM OF THE EFFECT OF NOISE ON THE EAR IN RELATION TO NOISE FREQUENCY CHARACTERISTICS (CLINICAL AND EXPERIMENTAL STUDY) [DIFFERENTSIROVANNYI PODKHOD K OTSENKE MEKHANIZMA DEISTVIIA SHUMA NA ORGAN SLUKHA V ZAVISIMOSTI OT EGO CHASTOTNYKH KHARAKTERISTIK /KLINIKO-EKSPERIEMNTAL'NOE ISSLEDOVANIE/]
B. V. SHISHOV (Leningadskii Sanitarno-Gigienicheskii Meditsinskii Institut, Leningrad, USSR) Vestnik Otorinolaringologii (ISSN 0042-4668), Sept.-Oct. 1985, p. 13-15. In Russian. refs

Experiments conducted on guinea pigs and factory workers to determine the effect of various noise frequencies on the ear are presented. The experimental conditions and procedures used on 102 six-eight-months-old guinea pigs are described. The animals were subjected to noise of 2000, 400, and 8000 Hz at 80-100 dB for four to six hours; the observed effects on the cochlea and on the nucleic acids are explained. A clinical test on 92 workers of a porcelain factory and 83 workers of a textile factory is described; the workers were exposed to the same frequencies and decibels as the guinea pigs. The effect of noise on auditory functions is examined. The correlation between the experimental and clinical data is explained. The results reveal that an increase in noise frequency causes a narrowing in the extent of changes toward the base of the cochlea, and that an increase in noise frequency by an octave causes a decrease in noise intensity by 5 dB. I.F.

THE SKELETON IN SPACE
A. W. GOODE (London Hospital, England) and P. C. RAMBAUT (NASA, Washington, DC) Nature (ISSN 0028-0836), vol. 317, Sept. 19, 1985, p. 204, 205. refs

Calcium loss experience by astronauts under weightless conditions is discussed. I-125 photon absorption measurements on astronauts on the Apollo 14, 15, and 16 flights showed bone density decreases of 6.6 percent in one astronaut and 7.3 percent in another. The estimated total body calcium loss on Apollo 17 was 0.2 percent. The test results indicate that calcium losses occur mainly from the weight-bearing parts of the skeleton. Measures to counteract the losses include 'penguin' suits, maintenance of nutrient intakes at high levels, and extensive exercise on ergometer and treadmill. C.D.

PRELIMINARY MEDICAL RESULTS OF THE 5-MONTH FLIGHT ONBOARD SALYUT-7-SOYUZ-T
E. I. VOROBEV, O. G. GAZENKO, E. B. SHULZHENKO, A. I. GRIGOREV, A. S. BARER et al. IN: International developments in space stations and space technologies; Proceedings of the Thirty-fifth Congress, Lausanne, Switzerland, October 7-13, 1984 . New York, AIAA, 1985, p. 209-215.
(IAF PAPER 84-184)

Two Soviet astronauts performed a long-term space flight during the time from June 27 to November 23, 1983. Medical investigations regarding the two men were performed during and after the flight. The investigations had the objective to acquire more data about the reaction of the human body to a prolonged exposure to weightlessness. The present paper is concerned with the preliminary results of the medical studies. Attention is given to the general characterization of the 150-day flight, a general characterization of the status of the crew, measurements conducted during lower body negative pressure tests, measurements made during exercise tests, the physiological and hygienic aspects of astronauts during extravehicular activity, biochemical examinations, and postflight examinations. The obtained data have demonstrated once again that man can efficiently and productively work in long-term space flights. G.R.

PERIODISATION AND CLASSIFICATION OF ADAPTIVE REACTIONS OF MAN IN PROLONGED SPACE FLIGHTS
O. G. GAZENKO, E. B. SHULZHENKO, A. I. GRIGOREV, and A. D. EGOROV IN: International developments in space stations and space technologies; Proceedings of the Thirty-fifth Congress, Lausanne, Switzerland, October 7-13, 1984 . New York, AIAA, 1985, p. 216-225. refs
(IAF PAPER 84-185)

With respect to physiological changes, weightlessness appears to be the most important of various factors to which the human body is subjected during a space flight. The changes produced in the vital functions of the body during an exposure to weightlessness are considered, taking into account adaptive reactions and the time of their occurrence. It is found that the phase of completion of primary adaptive reactions (4-6 weeks in duration), is characterized by the further development of adaptive reactions and the recovery (partial or complete) of the final adaptive effects of certain functions. The period of relative stabilization of adaptation reactions represents the attainment of a new level with respect to the functioning of basic systems of the body. G.R.

EFFECT OF HEAD-DOWN TILT ON BASAL PLASMA NOREPINEPHRINE AND RENIN ACTIVITY IN HUMANS
S. R. GOLDSMITH, G. S. FRANCIS, and J. N. COHN (Hennepin County Medical Center; U.S. Veterans Administration Medical Center; Minnesota, University, Minneapolis) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Oct. 1985, p. 1068-1071. USVA-supported research. refs
(Contract NIH-HL-22977-03)

The effects of loading cardiopulmonary baroreceptors on basal norepinephrine and renin activity were studied in six normal human subjects. Loading of cardiopulmonary baroreceptors was accomplished by a 60-min 30-deg head-down tilt with small supplemental saline infusions. Central venous pressure was measured continuously by intrathoracic catheter; arterial pressure was measured indirectly by cuff. During the tilt, central venous pressure increased from 5.1 + or - 1.3 to 8.9 + or - 1.7 mmHg (P less than 0.001), whereas arterial pressure was unchanged. Plasma norepinephrine (185 + or - 85 pg/ml) and plasma renin activity (3.9 + or - 5.7 ng/ml h) did not change. Moderate sustained loading of cardiopulmonary barorcceptors is therefore without effect on unstressed plasma norepinephrine and renin activity in normal humans, suggesting that the tonic inhibitory effects of these receptors on these neurohumoral control systems are not readily increased in the basal state. MEDICAL REQUIREMENT FOR MANNED SPACE PROGRAMME
P. C. CHATTERJEE (Indian Air Force, New Delhi, India) Aviation Medicine, vol. 28, Dec. 1984, p. 102-106.

Medical requirements for manned space programs basically include freedom from clinical or subclinical diseases and absence of definite predisposition. The capability to withstand different stresses encountered during a spaceflight as produced by different simulators is also required. The system of selecting cosmonauts is being constantly improved, taking into account past experience, flight peculiarities, mission duration, and scientific tasks to be performed. Advancement in general medicine, biomedical engineering, space medicine, and medical experimentation, both inflight and postflight, constantly updates the system. Author

MEDICAL EVALUATION OF COSMONAUTS - PHYSIOLOGICAL STRESS TESTING
M. B. DIKSHIT, P. K. BANERJEE, J. S. KULKARNI, E. M. IYER (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), and M. M. SINGH (Air Force Central Medical Establishment, New Delhi, India) Aviation Medicine, vol. 28, Dec. 1984, p. 107-115. refs

The physiological stress testing of cosmonauts is examined. The means of assessing the ability of an individual to withstand zero gravity and recover, and the effects of zero gravity on the cardiovascular and renal systems are discussed. The testing of lung capacity using a spirometry is explained. The use of bicycle ergometry tests to evaluate physical fitness by monitoring heart rate, blood pressure, and ventilation is explained. Orthostatic tolerance was measured using tilt table tests and cardiovascular reflex responses were determined by cold pressure tests; these tests are described and the results are tabularly presented. The possible disadvantage of high endurance physical capacity during space flights is explained. The addition of heat balance studies to the evaluation of cosmonauts is discussed. I.F.

MEDICAL EVALUATION OF COSMONAUTS - CARDIOVASCULAR ASSESSMENT
V. M. ALURKAR (Indian Air Force, Command Hospital, Bangalore, India) Aviation Medicine, vol. 28, Dec. 1984, p. 116-120.

A high level of functional efficiency of the cardiovascular system is essential for space flight. The considerable increase in G force during launch, weightlessness during orbital flight, and physiological readjustments during reentry are the main stresses affecting the cardiovascular system. Hence special emphasis is laid on ruling out any underlying heart disease by a thorough clinical, biochemical, radiological, and electrocardiographic examination. ECG at rest and on stress testing are especially useful. Echocardiographic examination has been extremely useful in the diagnosis of IHSS, MVP, and bicuspid aortic valve which could have been undetected earlier. Author

DENTAL EVALUATION OF COSMONAUTS
Y. P. KAPOOR (Indian Air Force, Dental Centre, Bangalore, India) Aviation Medicine, vol. 28, Dec. 1984, p. 140-144. refs

The stomatoscopy, electro-odonto-diagnostics and thermal test, and stomatological investigation used in the dental evaluation of cosmonauts are described. The procedures involved in the clinical examination of the oral cavity are discussed. Explanations of the problems with individual teeth, which include dental caries, attrition, abrasion, tooth mobility, migration of teeth, overbite, open bite, and cross bite are provided. The examination of the alveolar mucosa and gingiva is described. The periodontium is observed for periodontal pockets and the temporomandibular joint is examined for any irregularities. The second step in the dental evaluation includes electro-odonto-diagnostics and a thermal test. The use of the electric pulp tester, which indicates the vitality or nonvitality of the pulp, combined with the thermal test is examined. Possible dentofacial abnormalities are observed with an orthopantograph of the skull. The dental standards for successful completion of the examination are discussed. I.F.

A mathematical model is developed for the regulation of human blood circulation under +Gz acceleration in the head-pelvis direction. A digital-computer study of the model shows that it is adequate to experimental data with respect to indices of systemic hemodynamics in the entire +Gz acceleration range up to the tolerance limit. Regulatory processes detemining changes in the central blood volume are shown to play an important role in the pattern of circulation response to +Gz acceleration; the role of active venomotor responses is relatively small. EFFECT OF SINGLE ACTIONS OF WEAK ELECTROMAGNETIC FIELDS OF ULTRALOW FREQUENCY ON INDICES OF ENDOCRINE SYSTEM Abstract Only
Y. A. ZAGORSKAYA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 50 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 2, Mar. - Apr. 1985 p 293-299
Avail: NTIS HC A06

Functions of the human endocrine system was studied after a single exposure to weak electromagnetic field of ultralow frequency with a tension close to the real geomagnetic background and one approaching the alpha rhythm of human EEG. A single 5 hr exposure of healthy male subjects led to decreased activity of hypophysis-adrenal system manifested by lower levels of urinary 17-keto steroids, lower plasma cortisol and corticosterone and increased ACTH levels, accompanied by increased levels of circulating blood testosterone which in some cases exceeded the normal physiological range. Increased levels of TSH and free and total thyroxin in blood was noted in some subjects. The findings represent adaptable compensatory reactions of the regulatory systems showing that this system is highly sensitive to the effect of a magnetic field. E.A.K.

ASSESSMENT OF STATE OF CHRONOTROPIC AND INOTROPIC HEART FUNCTION AT DIFFERENT DEGREES OF PHYSICAL FITNESS Abstract Only
V. V. AKSENOV and I. G. TAZETDINOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 62-63 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 1, Jan. - Feb. 1985 p 96-101 Original language document announced in IAA as A85-27781
Avail: NTIS HC A06

An approach to the mathematical analysis of cardiosignals is developed which makes it possible to quantitatively evaluate the chronotropic and inotropic functios of the heart from a systems point of view. Combining statistical, cross-correlation, and frequency analyses, this approach makes it possible to assess physical-training level in aerospace and sports medicine. As an example, cardiosignals from the flight commanders and engineers on the Salyut-5 and Salyut-6 orbital stations were analyzed. It is concluded that the mathematical analysis of cardiosignals recorded in conditions of rest makes it possible to evlauate physical-training level as the potential readiness of regulatory systems to provide for the required high level of body functioning under physical loads. CAPACITY FOR WORK AND HEMODYNAMICS IN MALES RESIDING AT MIDDLE AND HIGH LATITUDES Abstract Only
L. N. MATVEYEV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 63 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 1, Jan. - Feb. 1985 p 113-120
Avail: NTIS HC A06

The reaction of the cardiovascular system to physical exertion of various intensity was studied. Fitness for physical work of nonindigenous population of the Northeast is closely associated with length of stay in the North. Performance of work analogous to that performed by men from Moscow produces a significant hyperenergic reaction of the cardovascular system. Persons staying in the North for up to 5 years have adequate metabolic requirements from hyper-dynamia which provides adequate capacity for physical work and rapid recovery rates but a stay of more than 5 years gives lesser capacity for phyiscal work and slowing of recovery rates, due to an approach to the limits of adaptational capacities of the cardiovascular system. Men born in the North have some limitation on their capacity for physical work but have rather rapid recovery rates, indicating a whole complex of adaptational changes. E.A.K.

Subjects at a coastal Antarctic station underwent autotraining sesions in individual rooms, seated in a comfortable position. Autotraining sessions to achieve relaxation were most effectiv in the expedition members with average or low level of adaptive plasticity, beginning in the second half of wintering at the station. Intersystem inter-relationships of central and peripheral links for providing adaptive reconstructions during autotraining of the expedition members depended on individual parameters of cerebral neurodynamics. Autotraining proved to be an adequate nonmedical method for preventing and correcting disadaptational disturbances in the expedition members during their stay in Antarctica. Individual differences in the plasticity of neurodynamic processes determine the nature of autonomic reactions of the body to autotraining. E.A.K.

EFFECT OF INCLUSION OF SUPPLEMENTARY ASCORBIC ACID IN DAILY DIET ON DEGREE OF VITAMIN SATURATION OF BODY AND THERMORESISTANCE OF ERYTHROCYTES WHILE WORKING IN ARID ZONE Abstract Only
I. M. MOMMADOV, V. A. GRAFOVA, and G. A. TUPIKOVA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 64-65 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 1, Jan. - Feb. 1985 p 129-133 Original language document announced in IAA as A85-27786
Avail: NTIS HC A06

The physiological needs for ascorbic acid and of the effect of vitamin C supplements at the rate of 150 mg/day on human resistance to heat in arid zones were studied. Ascorbic acid sufficiency was determined by its level in the fasting morning urine. Subjects ate a dragee containing 50 mg of ascorbic acid 3 times a day immediately after meals which increased the vitamin C level in the morning urine. The 150 mg/day dosage normalized the studies ascorbic acid level. The vitamin C supplement increases erythrocytes resistance to heat when working in high temperatures with high insolation. E.A.K.

EFFECT OF VARIOUS DOSES OF SOME VITAMINS ON NON-SPECIFIC MECHANISMS OF ADAPTATION OF MAN Abstract Only
V. S. NOVIKOV and V. N. BORTNOVSKIY *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 65 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 1, Jan. - Feb. 1985 p 134-137 Original language document announced in IAA as A85-27787
Avail: NTIS HC A06

An experimental study was conducted to investigate the effect of vitamin additions on the state of the vascular system in the nonspecific resistance of the body in persons working in unfavorable environmental conditions. Thirty operators 19 to 23 years of age were studied whose work was characterized by high work strain, hypokinesia, and environmental discomfort (e.g., high air temperature). One group of 10 subjects received the following vitamins daily: retinol acetate (0.00172 g), thiamine bromide (0.0026 g), riboflavin (0.002 g), nicotinamide (.015 g) pyridoxin hydrochloride (0.002 g), and ascorbic acid (0.07 g). A second group of 10 subjects received a double dose of the same vitamins, while a third group (the control) received placebos. Administration of the vitamins in a double dose was found to prevent the development of deadaptive changes. It is concluded that vitamin additions can prevent a reduction in the nonspecific resistance of the body under extreme environmental conditions. E.A.K.

ADAPTATION OF MAN TO EXTREME CONDITIONS OF ANTARCTICA Abstract Only
S. I. SOROKO, A. L. MATUSOV, and Y. A. SIDOROV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 66 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 10, no. 6, Nov. - Dec. 1984 p 907-920
Avail: NTIS HC A06

An effort is made to clarify the problem of human adaptation to Antarctic conditions on the basic of multiyear complex ecological-physiological studies. These studies include the investigation of: (1) the ecological factors (natural and anthropogenic) of Antarctica; (2) individual features of the adaptive plasticity of central and vegetative mechanisms of regulation under various factors of the winter stay; (3) the dynamics of analyzer systems; (4) the work capacity of polar workers; (5) the psychoneural status of workers; and (6) the health of expedition members. It is concluded that the complex of extreme factors of Antarctica makes severe demands on the nervous, vegetative, and psychoemotional elements of human beings, calling forth all the reserve capacities of the body. Avail: NTIS HC A06

New data are reported pertaining to individual expological differences in the guided self-regulation of heart rate (HR) and arterial pressure (AP) in a visual feedback tracking study. Particular attention is given to individual differences in the latency of effects from baroreceptors at different levels of CNS regulation, these differences being manifested in differences in the amplitude-phase characteristics of guided oscillations of HR and AP rhythms with respect to a sinusoidal control signal. It is concluded that the proposed technique can be used as a training tool in alternating-load exercise and to study the possibility of destabilizing a regulation system with the aim of changing its state. CONDITIONING POTENTIALITIES OF RESPIRATORY APPARATUS Abstract Only
F. T. AGARKOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 69 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 10, no. 6, Nov. - Dec. 1984 p 981-987
Avail: NTIS HC A06

The temperature of expired alveolar air sublingual, axillary and rectal temperature with temperature of the environment at -30 up to +30 C +50, +60 and +70 C in a heat chamber. Temperature of expired alveolar air at the height of maximally deep exhalation has the same value. Heat or cold, disturbing the isothermy, caused destabilization and an increasing change of the temperature of exhaled alveolar air. Exogenous heat effects disturb isothermy of the organism and destabilize the temperature of the alveolar air. Factors which limit the conditionaing potentials of the respiratory apparatus in the presence of intense heat include the air temperature, the air humidity and developing hypothermia, the degree of pronouncement of which determines the degree of increase of temperature of the alveolar air, to the greatest extent. It is assumed that the respiratory apparatus is not an ideal conditioner and the existing idea about the constancy and the conformity of the temperature of the alveolar air to the temperature of the core of the body is reconsidered. CLASSIFICATION OF CHANGES IN ELECTROCARDIOGRAM DURING MUSCULAR EXERTION OF HEALTHY INDIVIDUALS Abstract Only
A. I. ZAVYALOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 73 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 2., Mar. - Apr. 1985 p 201-207
Avail: NTIS HC A06

The determination of human endurance during physical stress is one of the most important tasks in aviation, space, work and in sport physiology. Bodily fuctioning depends on the cardio-respiratory system and evaluation of the myocardium during exertion is achieved by study of the electric activity of the heart. The dynamics of EKG were studied on subjects while applying various stress loads. Advanced athletes and sedentary individuals were examined during exercise and in rest periods. Telemetric and conductive EKG seismography, photoplethysmography and arterial pressure were studied. The data statistically leading to comparative analysis was analyzed. Appearance of overstress signals on EKG was accompanied by decreased frequency of heart contractions, a drop in systolic arterial pressure, lowered blood supply, decreased amplitude of seismocardiac signals and of the photoplethysmography wave, indicating a disorder in the contractural function of the myocardium. EYE-MOVEMENT ACTIVITY AS INDEX OF FUNCTIONAL STATE OF BRAIN Abstract Only
Y. D. KHOMSKAYA and I. V. YEFIMOVA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 73 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 2., Mar. - Apr. 1985 p 235-240
Avail: NTIS HC A06

Two types of eye movements slow or tracing movements and fast, saccadic movements with different control mechanisms were studied. Rhythmic saccadic eye movements were studied in relationship to mental fatigue which develops during the day and the characteristics of eye movements in individuals with varying degree of motor activity. A definite correlation between the parameters of eye movement reactions and general motor activity of the subjects with their functional state was found. Fatigue and emotional stress resulted in increased frequency of eye movements especially in the more sedentary individuals. It is suggested that eye movement reactions could be used as diagnostic tools in determining the functioning state of the brain. E.A.K.

The application of eleutherococcus extract in the course of 10 days prior to applied heat stress was found to have a favorable effect on body thermoregulation; body temperature was 0.73 C lower in test subjects than in the control group. However, a high biological cost for the heat adaptation was observed, expressed in two effects: (1) a significantly higher energy cost of enhanced thermal stability under eleutherococcus administration than in the control group; and (2) a more pronounced mobilization of proteins, manifested in the growth of the fraction of protein consumed in the energy metabolism and in a higher level of excretion of nitrogen compounds in the sweat and urine. VESTIBULAR RESISTANCE AND BLOOD CIRCULATION CHANGES IN ORTHOSTATIC POSITION DURING HYPERTHERMIA Abstract Only
V. I. SOBOLEVSKIY *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 74-75 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 2., Mar. - Apr. 1985 p 327-330
Avail: NTIS HC A06

Vestibular and orthostatic stability of the body under various environmental conditions in applied human physiology especially under conditions of progressive exogenic hyperthermia was studied. Thermogenic changes of arterial pressure, volume of circulating blood and peripheral resistance were studied in gravitational and vestibular loads. It was shown that with limited internal hyperthermia the vestibular and orthostatic stabilities of men are unaffected. The principal mechanism of lowering resistance to vestibular and gravitational irritants is the disturbance in the blood circulating system and in cardiac activity. E.A.K.

HEAT TRANSFER MECHANISM IN HUMAN EXTREMITIES Abstract Only
T. G. RAYGORODSKAYA, V. N. KOSHELEV, and O. L. PERTSOV *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 75 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 2., Mar. - Apr. 1985 p 336-338
Avail: NTIS HC A06

The possible effects of conductive and convective forms of heat transfer on the formation of the skin temperature field in the lower extremities during exercise of the muscles are assessed by a comparison of experimental data with numerical results obtained on the basis of the mathematical model of Koshelev and Pertsov (1978). Results indicate that the role of heat conduction in the transfer of heat from deep muscles to extremity surfaces is insignificant, while most of the hat dissipation in the tissues and heat transfer to the surfaces occurs convectively. In electrophysiological experiments and during determination of EEG curves, the flow of formation must be filtered to isolate most important indices to be able to follow the functional state of

the brain. A special monitor was constructed which consists of a TV camera, video-control unit and an image synthesizer consisting of synchronous impulse selector, round figure contructor and a coloring block. The degree of brain activity is converted to the background color scheme, to study the subject concurrently with the observation of brain activation. This apparatus can be modified for other clinical applications. E.A.K.

DETERMINATION OF SYMMETRY AND PHASE IN HUMAN VISUAL RESPONSE FUNCTIONS: THEORY AND EXPERIMENTS Ph.D. Thesis
D. G. STORK 1984 189 p
Avail: Univ. Microfilms Order DA8510459

Several mathematical and experimental techniques to deduce the temporal impulse response and static line spread function of the human visual system were employed. The problem of linearity in the visual system near threshold is recieved and the mathematical foundations of different experimental approaches are discussed. It is found that the method of constant (threshold) output avoids certain difficulties associated with other methods. The use of harmonic stimuli in vision, and the inherent phase or symmetry ambiguities associated with it are described. Physiological data on cat responses are analyzed. It is demonstrated that a spatially antisymmetric line spread function explains this data better that a spatially symmetric one. A novel stimulus segconverging and diverging stimuli is introduced and show how it can be used to probe spatial symmetry of the line spread function.It is demonstrated that the sensitivity to converging and diverging stimuli are equal. It is shown that adaptation to velocity stimuli at one retinal position can affect (reduce) sensitivity at spatially separated positions. Dissert. Abstr.

STRENGTH MODELING REPORT
N. I. BADLER, P. LEE, and S. WONG 30 May 1985 79 p refs
(Contract NAS9-16634)
(NASA-CR-171896; NAS 1.26:171896) Avail: NTIS HC A05/MF A01 CSCL 06P

Strength modeling is a complex and multi-dimensional issue. There are numerous parameters to the problem of characterizing human strength, most notably: (1) position and orientation of body joints; (2) isometric versus dynamic strength; (3) effector force versus joint torque; (4) instantaneous versus steady force; (5) active force versus reactive force; (6) presence or absence of gravity; (7) body somatotype and composition; (8) body (segment) masses; (9) muscle group envolvement; (10) muscle size; (11) fatigue; and (12) practice (training) or familiarity. In surveying the available literature on strength measurement and modeling an attempt was made to examine as many of these parameters as possible. The conclusions reached at this point toward the feasibility of implementing computationally reasonable human strength models. The assessment of accuracy of any model against a specific individual, however, will probably not be possible on any realistic scale. Taken statistically, strength modeling may be an effective tool for general questions of task feasibility and strength requirements. G.L.C.

THE EFFECTS OF AGE, SLEEP DEPRIVATION, AND ALTITUDE ON COMPLEX PERFORMANCE
H. W. MERTENS and W. E. COLLINS May 1985 22 p
(AD-A156987; AD-E950724; FAA-AM-85-3) Avail: NTIS HC A02/MF A01 CSCL 06S

Little research has been concerned with the combined effects on performance of age, sleep deprivation, and altitude. This study examined their potential interaction with laboratory tasks measuring aviation-related psychological functions. Healthy men in two age groups, 30-39 yr (N=16) and 60-69 yr (N=14), were evaluated for complex (time-shared) performance in the four possible combinations of two altitudes (ground level vs. 3,810 m (12,500 ft)) and two sleep conditions (sleep permitted vs. sleep deprived). Following training, performance was evaluated during 3-h test sessions in the morning and afternoon of each of 4 test days. Complex performance, measured by the Multiple Task Performance Battery (MTPB), included: monitoring of warning lights and meters, mental arithmetic, problem solving, target identification, and tracking. Workload was varied within each hour by varying the tasks performed simultaneously. Performance was significantly lower in the older subjects, but age did not interact significantly with sleep deprivation or altitude. When subjects were rested, altitude had no effect. When subjects were sleep deprived, performance was significantly lower in general, and the greatest decrement in performance occurred at altitude. Increasing workload enhanced the interaction of sleep deprivation and altitude. The performance of older subjects tended to be more affected by increases in workload, but decrements induced by sleep deprivation and altitude did not appear to interact with age. These findings provide empirical evidence in support of warnings in the aeromedical literature concerning greater effects of sleep deprivation as altitude increases within the general aviation range. VARIABILITY ANALYSIS OF VISUALLY INDUCED RESPONSES IN THE MIDST OF NOISE Ph.D. Thesis [VARIABILITEITS ANALYSE VAN VISUEEL OPGEWEKTE RESPONSIES TE MIDDEN VAN RUIS]
M. F. VANLOON Apr. 1984 91 p refs In DUTCH
(B8564052) Avail: NTIS HC A05/MF A01

The variability of EEG responses to visual stimuli, and possible relations between variations in latency and amplitude are investigated. A matched filter to detect and estimate the magnitude of variabilities on series of recordings until a 20% signal to noise ratio is reached was applied to responses of two subjects. Measurements show that in case of variability no relation exists between stimulus and the magnitude of the variability in latency or amplitude. Variability seems mainly to depend on the condition of the subject. Author (ESA)

PERCEPTUAL AND PHYSIOLOGICAL RESPONSES DURING EXERCISE IN COOL AND COLD WATER
M. M. TONER, L. L. DROLET, and K. B. PANDOLF Jun. 1985 23 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A157334; USARIEM-M-32/85) Avail: NTIS HC A02/MF A01 CSCL 06S

This investigation examined the interaction of exposure to cold water stress with both perceived exertion and thermal sensation (TS) during exercise. Eight male volunteers performed arm, leg and combined arm and leg exercise for 45 min in water at 20 and 26 C. Exercise was performed at a low and a high intensity relative to the ergometer specific peak oxygen uptake (VO2 peak). In general, percent VO2 peak did not differ ($p > 0.05$) between types of exercise in either 20 or 26 C water. During low intensity exercise when power output was matched across water temperatures (Tw), percent VO2 peak was greater ($p < 0.05$) in 20 C water (52%) compared to 26 C water (42%). Ratings of perceived exertion (RPE) did not differ ($p > 0.05$) between Tw. During high intensity exercise when percent VO2 peak was matched across Tw, RPE was lower during exercise in 20 C compared to 26 C. Multiple correlation analyses comparing both final RPE and thermal sensation with physiological and thermal measures were performed across type of exercise and Tw. RPE was moderately correlated with heart rate and ventilation, whereas very slight relationships were established with TS, skin and rectal temperatures. TS was moderately correlated with skin and rectal temperatures whereas low correlations existed between TS and both heart rate and ventilation. These data suggest that the change in oxygen uptake associated with exercise in cold water does not add to the overall perception of exertion. This perception appears to be related to cardiopulmonary variables rather than thermal measures, whereas thermal sensation is related to thermal measures and not cardiopulmonary variables. GRA

PHYSIOLOGICAL EFFECTS OF TRAINING
W. J. KRAEMER and W. L. DANIELS 25 Jun. 1985 44 p
(AD-A157417; USARIEM-M-31/85) Avail: NTIS HC A03/MF A01 CSCL 06P

With the evolution of exercise science a vast amount of information concerning the physiological effects of training has been generated. Understanding the basic training responses and adaptations of various modes of conditioning can give the clinician insights into exercise prescription. The purpose of this manuscript is not to present an exhaustive review, but provide the reader with a basic overview of the physiological effects of training. Aerobic training results in a number of adaptations in humans. The magnitude of this response is dependent upon a number of factors. It depends upon the type, the intensity, the frequency and the duration of the training; as well as the characteristics of the person undergoing training. In this section, we will discuss the physiological changes associated with the adaptation to training and how the characteristics of the individual and the training itself affect this adaptation. GRA

IS THE CEREBELLUM INVOLVED IN MOTOR AND PERCEPTUAL TIMING: A CASE STUDY Final Report
S. W. KEELE, D. L. MANCHESTER, and R. D. RAFAL 15 May 1985 21 p
(Contract N00014-83-K-0601)
(AD-A157452; TR-85-5-ONR) Avail: NTIS HC A02/MF A01 CSCL 06P

A model and a technique developed by Wing and Kristofferson (1973) decomposes variance of timing into that putatively due to a central timekeeper (a clock) and that due to implementation of movement through the motor system. A patient with unilateral cerebellar damage, when attempting to tap out a regular series of intervals, showed a large increase in timing variability for the left

hand compared to the right hand at target intervals of 550 msec. Application of the model suggested the increased variability was in the clock. Moreover, the patient appeared to have greater than normal difficulty in discriminating the durations of auditorially based time intervals. Earlier work (Wing, Keele, and Margolin, 1984) had suggested that basal ganglia damage in a Parkinson's patient also manifested itself as a clock disorder. The suggestion that clock variability arises from two different sources leads us to speculate that the brain's clock involves a circuit between several brain systems. These speculations are quite tentative because of interpretive problems with some of the data. GRA

FORCE AND TIMING COMPONENTS OF THE MOTOR PROGRAM Final Report
R. B. IVRY 15 May 1985 55 p
(Contract N00014-83-K-0601)
(AD-A157584; TR-85-3-ONR) Avail: NTIS HC A04/MF A01 CSCL 05J

Three experiments assess the effects of variations of force and time on response latency on both simple and choice reaction time. The first two experiments demonstrate that, while latency does not vary as a function of force, increasing timing demands by requiring that a response be maintained led to increases in reaction time. These results led to the development of a model of motor programming in which force and timing are dissociated as separate components. However, the data also indicated that the force component may be further analyzed into two subcomponents: force activation and force deactivation. The model predicts that the latter subcomponent may be programmed on-line provided sufficient time elapses between the implementation of the two subcomponents. The results of Experiment 3 support this prediction and further validate the proposed model. GRA

HEALTH HAZARD EVALUATION OF LIQUID MONOPROPELLANTS. PHASE 4. SUBCHRONIC INHALATION OF HYDROXYLAMMONIUM NITRATE, JANUARY 1985
19 Jul. 1985 24 p
(AD-A157623; USAEHA-75-51-0132-85) Avail: NTIS HC A02/MF A01 CSCL 06T

This study was conducted to determine the effects of repeated airborne exposures to animals of hydroxylammonium nitrate (HAN), a major component of liquid gun propellants. This evaluation will assist in advising on the potential health risks associated with handling these materials. Rats and dogs were exposed to aerosolized HAN for 90 days at concentrations of 300, 100, and 33 mg/cu m. Dose-related effects occurred in both species and were characterized in rats by weight loss and spleen and liver enlargement. In dogs, respiratory irritation and blood dyscrasia were the major toxic effects. Minimal effects were observed at the low dose, 33 mg/cu m. Personnel should be protected against all routes of HAN exposure since the systemic effects are additive. An airborne concentration of HAN at 3 mg/cu m may be considered as a basis for the development of a maximum allowable workplace atmosphere. Accidental exposures in man should be closely monitored for cyanosis, anemia and respiratory distress. Treatment for methemoglobinemia may be indicated. GRA

DOSE DISTRIBUTION AND THE RELATIVE BIOLOGICAL EFFECTIVENESS OF INTERNAL ALPHA EMITTERS
D. R. FISHER, M. E. FRAZIER, and T. K. ANDREWS, JR. Mar. 1985 15 p refs Presented at the 9th Symp. on Microdosimetry, Toulouse, 20 May 1985
(Contract DE-AC06-76RL-01380)
(DE85-013041; PNL-SA-12638; CONF-850506-9) Avail: NTIS HC A02/MF A01

The influence of dose distribution at the cellular level on the relative biological effectiveness of internally deposited alpha-particle emitters were examined. Cultured Chinese Hamster Ovary (CHO-K1) cells were irradiated in vitro by insoluble ceramic microspheres of zirconium oxide labeled with (239)Pu. The absorbed dose and dose rate were held constant at 0.7 Gy and 0.17 Gy h(-1), respectively. Relative biological effectiveness (RBE) was evaluated using three endpoints: initial cell survival, mutation frequency, and primary DNA damage. Cell death was greatest for irradiations by sources of low specific activity. Mutation frequency was greatest for cells exposed to agitated sources and least for irradiation by stationary high-specific-activity sources. The amount of DNA damage increased at the alpha radiation was more uniformly distributed amongst the cells at risk. DOE

THYROID ABSORBED DOSE FOR PEOPLE AT RONGELAP, UTIRIK AND SIFO ON MARCH 1, 1954
E. T. LESSARD, R. P. MILTENBERGER, R. A. CONRAD, S. V. MUSOLINE, J. R. NAIDU, A. MOORTHY, and C. J. SCHOPFER Mar. 1985 84 p refs
(Contract DE-AC02-76CH-00016)
(DE85-014695; BNL-51882) Avail: NTIS HC A05/MF A01

A study was undertaken to reexamine thyroid absorbed dose estimates for people accidentally exposed to fallout at Rongelap, Sifo, and Utirik Islands from the Pacific weapon test known as Operation Castle BRAVO. The study included: (1) reevaluation of radiochemical analysis, to relate results from pooled urine to intake, retention, and excretion functions; (2) analysis of neutron-irradiation studies of archival soil samples, to estimate areal activities of the iodine isotopes; (3) analysis of source term, weather data, and meteorological functions used in predicting atmospheric diffusion and fallout deposition, to estimate airborne concentrations of the iodine isotopes; and (4) reevaluation of radioactive fallout, which contaminated a Japanese fishing vessel in the vicinity of Rongelap Island on March 1, 1954, to determine fallout components. The conclusions of the acute exposure study were that the population mean thyroid absorbed doses were 21 gray (2100 rad) at Rongelap, 6.7 gray (670 rad) at Sifo, and 2.8 gray (280 rad) at Utirik. The overall thyroid cancer risk we estimated was in agreement with results published on the Japanese exposed at Nagasaki and Hiroshima. The major route for intake of fallout was by direct ingestion of food prepared and consumed outdoors. DOE

PROSPECTS FOR DNA METHODS TO MEASURE HUMAN HERITABLE MUTATION RATES
M. L. MENDELSOHN 14 Jun. 1985 9 p Presented at the 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(Contract W-7405-ENG-48)
(DE85-014555; UCRL-92242; CONF-8506137-5) Avail: NTIS HC A02/MF A01

A workshop cosponsored by ICPEMC and the US Department of Energy was held in Alta, Utah, December 9 to 13, 1984 to examine the extent to which DNA-oriented methods might provide new approaches to the important but intractable problem of measuring mutation rates in control and exposed human populations. The workshop identified and analyzed six DNA methods for detection of human heritable mutation, including several created at the meeting, and concluded that none of the methods combine sufficient feasibility and efficiency to be recommended for general application. ACUTE PULMONARY EFFECTS OF FORMALDEHYDE EXPOSURE IN HUMANS Progress Report, 1 Dec. 1983 - 30 Nov. 1984
Jul. 1985 6 p refs
(Contract DE-AS05-84ER-60192)
(DE85-014728; DOE/ER-60192/1) Avail: NTIS HC A02/MF A01

Nonsmoking subjects were randomly exposed at rest for 3 hours each to 0.0, 0.5, 1.0, and 2.0 ppM HCHO for establishing a dose-response curve at rest, and the effect of 2 ppM HCHO with moderate exercise with a 24-hr postexposure was evaluated. Results of exposure of the 10 subjects to the concentration are: (1) a significant or near significant decrease, compared to clean

air; (2) the FVC and FEV1 time courses of response showed no clear change in function over any 3-hour exposure from 0.0 to 2.0 ppM HCHO; and (3) including the 2.0 ppM HCHO exposure only mild symptoms were experienced. DOE

IMPROVEMENT IN WEAR PERFORMANCE OF SURGICAL TI-6AL-4V ALLOY BY ION IMPLANTATION OF NITROGEN OR CARBON
J. M. WILLIAMS, R. A. BUCHANAN, and E. D. RIGNEY, JR. Jun. 1985 10 p refs Presented at the Am. Soc. for Met. Conf. on the Appl. of Ion Plating and Implantation to Mater., Atlanta, 3 Jun. 1985 Prepared in cooperation with Alabama Univ., Birmingham
(Contract DE-AC05-84OR-21400)
(DE85-013986; CONF-8506139-1) Avail: NTIS HC A02/MF A01

The effects of ion implantations of either nitrogen or carbon on the corrosive wear performance of surgical Ti-6Al-4V alloy were investigated. In vitro tests made use of an apparatus which could produce certain chemical and mechanical aspects of a sliding interface such as that which occurs between alloy and polyethylene components of an artificial hip (or knee) joint. Cylindrical samples of the Ti alloy were rotated between loaded, conforming pads made of ultrahigh molecular weight polyethylene (UHMWPE) while these test components were immersed either in a saline solution or a saline solution with bovine serum added. During the tests open circuit corrosion currents for the alloy were measured by the Tafel extrapolation technique. Profilometry studies were done before and after the tests. Alloy samples implanted with either nitrogen or carbon remained as new for all test conditions. Unimplanted control samples were severely scored. Corrosion currents as measured under the mechanical action were reduced by a factor of approximately one hundred by the ion implantation treatments. DOE

HUMAN PILOT PARAMETER IDENTIFICATION FOR A SIMULATED AIR-TO-GROUND TARGET ACQUISITION TASK
P. A. STUDER (Eidgenoessisches Militaerdepartement, Bern, Switzerland) International Journal of Modelling and Simulation (ISSN 0228-6203), vol. 5, no. 2, 1985, p. 41-46. refs

An experimented pilot is used to perform the acquisition of a ground-fixed target during a simulated air-to-ground attack with a combat aircraft. Target tracking error as well as pilot output are stored for off-line parameter identification of a pilot reference model. The identification method is derived from first order sensitivity functions to the model parameters. The runs are organized to distinguish the learning from the skilled phase adaptation of the pilot to the simulation. Author

BEHAVIORAL AIRSICKNESS MANAGEMENT PROGRAM FOR STUDENT PILOTS
D. A. GILES (USAF, School of Aerospace Medicine, Brooks AFB, TX) and G. K. LOCHRIDGE (USAF, Aerospace Medical Operations, Tinker AFB, OK) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 991-994. refs

The management of recurrent airsickness in student pilots has traditionally involved positive reinforcement of motivation and limited use of medication. The Behavioral Airsickness Management (BAM) program seeks to establish an effective behavioral and cognitive intervention format for managing airsickness symptoms. There were 37 student pilots experiencing recurrent airsickness who were exposed to an assessment and rehabilitation program designed to develop diaphragmatic breathing skills while rapidly reducing physiological tension via cue-evoked relaxation strategies. Cognitive modification techniques were also included in the treatment protocol. Of the 37 students, 35 were returned to their flying training program with no recurrences of the airsickness problems. Cross-validation evidence is offered, as well as hypotheses for the program's success. Author

THE IMPACT OF LIFE EVENTS ON PILOTS - AN EXTENSION OF ALKOV'S APPROACH
S. J. SLOAN and C. L. COOPER (University of Manchester Institute of Science and Technology, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 1000-1003. refs
(Contract AF-AFOSR-83-0148)

A re-examination is made of Alkov's (1980, 1981) questionnaire method of revealing the predictability of the effects of a pilot's 'life events' on the pilot's perception of event/processes relationships. The questions were designed to elicit pilot perceptions of a pilot who has a significant accident potential. The questionnaire was given to 442 British pilots, with the results subjected to a statistical analysis. The analysis revealed that the pilots viewed the questions as evaluating emotional gains and losses and pilot characteristics. It was concluded that the aspects of a pilot's psychological state must be interpreted more contextually, and therefore the questionnaire used can have only limited accuracy in evaluations of the fitness of a pilot for flight responsibilities. THE EFFECTS OF MILD HYPOXIA ON A LOGICAL REASONING TASK
R. G. GREEN (Royal Air Force, Institute of Aviation Medicine, Farnborough, England) and D. R. MORGAN (Aircraft and Armament Experimental Establishment, Salisbury, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 1004-1008. refs

The initial performance of 150 humans in logical reasoning tests while experiencing mild hypoxia was assessed experimentally. The subjects were divided into three groups for the tests in a decompression chamber which simulated altitudes of 305, 2440, 3050 and 3660 m, respectively, with test scores being compared to those from a classroom setting. Both work speed and error rate were significantly affected by altitude. The error rate for the 3660 m altitude group was significantly higher than that of other groups. The decrement at 3660 m is concluded to support the results found by previous researchers with simulated higher altitudes. M.S.K.

OPENING UP THE ASTRONAUT SELECTION PROCESS
B. M. REGISTER Space World (ISSN 0038-6332), vol. V-9-261, Sept. 1985, p. 4-7.

The selection process for pilots, mission specialists, and payload specialists is discussed. NASA selects pilots and mission specialists from its thousands of applications, and payload specialists are chosen by the employer who has purchased space on a Shuttle launch. The requirements established by NASA for pilots and mission specialists are described. The three-stage selection process which involves completing applications, interviews, and physicals is explained. The qualifications of the present astronaut candidates are given. The training and functions of the payload specialists, who are chosen for their expertise in fulfilling mission objectives, are described. I.F.

SPATIAL-FREQUENCY MODEL FOR HYPERACUITY
C. R. CARLSON and R. W. KLOPFENSTEIN (RCA Laboratories, Princeton, NJ) Optical Society of America, Journal, A: Optics and Image Science (ISSN 0740-3232), vol. 2, Oct. 1985, p. 1747-1751. refs

Humans can detect vernier displacements of two abutted lines that are 30 times smaller than the bar spacings that determine their grating acuity. Since vernier acuity tasks, and hyperacuity tasks in general, reveal such drastically improved sensitivity, it has been traditionally assumed that the detection mechanisms responsible for hyperacuity are fundamentally different from those underlying ordinary spatial acuity. The need for unusual mechanisms is reinforced by the observation that hyperacuity is weakly affected by changes in suprathreshold contrast, whereas ordinary acuity is strongly influenced by contrast. Nevertheless, it is argued that many hyperacuity tasks can be understood without resorting to special mechanisms. A previously developed contrast-detection model, based on spatial-frequency channels, has been applied directly to a set of hyperacuity experiments. Hyperacuity performance is readily predicted without modification of the model. In addition, the model correctly predicts the insensitivity of hyperacuity to suprathreshold contrast as well as the measured result that moderate low-pass filtering of hyperacuity images does not significantly decrease hyperacuity performance. PERCEIVED CONTRAST IN THE FOVEA AND PERIPHERY
M. W. CANNON, JR. (USAF, Aviation Vision Laboratory, Wright-Patterson AFB, OH) Optical Society of America, Journal, A: Optics and Image Science (ISSN 0740-3232), vol. 2, Oct. 1985, p. 1760-1768. refs

Subjects estimated the perceived contrast of 2 deg diameter sine-wave grating patches for spatial frequencies of 2, 4, 8, and 16 cycles/deg, at eccentricities from 0 to 40 deg and contrasts up to 0.8. The data were well fitted in all cases by power functions of contrast minus threshold, with exponents of the order of 0.5 implying similar mechanisms in both fovea and periphery. The data also demonstrate that, at high physical contrast, the visual system is generally driven toward an operating state in which two stimuli of equal physical contrast have equal perceived contrast even if the thresholds are quite different. As a consequence, peripheral perceived contrasts produced by high physical contrasts show almost no change with eccentricity, whereas thresholds increase by at least an order of magnitude. This implies that mechanisms mediating threshold detection and suprathreshold perception may be different. Author

SPATIAL LOCATION AND HYPERACUITY - THE CENTRE/SURROUND LOCALIZATION CONTRIBUTION FUNCTION HAS TWO SUBSTRATES
D. R. BADCOCK and G. WESTHEIMER (California, University, Berkeley) Vision Research (ISSN 0042-6989), vol. 25, no. 9, 1985, p. 1259-1267. refs
(Contract PHS-EY-00220)

Contribution of the distribution of light to the spatial location of a feature was studied by investigating vernier acuity and jump detection in a perturbation technique, in which flanking lines are placed to the sides of the target line. It was found that the size and direction of vernier displacement, or jump, required for no apparent change of location, is influenced by the flanking line-test line distance (FTD) as well as by the contrast polarity of the flank (F). The effects of F polarity are different in the central FTD zone (i.e., on both sides between the two Fs) from those in the surround. Varying the duration of the F produces maximal effects in the surround with shorter duration than that required for maximal effects in the center. It is concluded that the localization contribution function has two components reflecting different mechanisms: in the center, the earlier (Westheimer and McKee, 1977) centroid hypothesis can be applied, while the surround has characteristics of the feature interaction seen in aftereffects. MEDICAL EVALUATION OF COSMONAUTS - PSYCHOLOGICAL TESTING
N. RAMACHANDRAN (Indian Air Force, Institute of Aviation Medicine, Bangalore, India) Aviation Medicine, vol. 28, Dec. 1984, p. 133-139. refs

Psychological evaluation of the cosmonauts was done at two levels: One was personality evaluation and secondly assessment of their performance on a vigilance task. Both projective and objective tests were used. Twelve pilots were thus evaluated. Stress tolerance of all the subjects was found to be adequate. On the vigilance task the accuracy of spotting the correct signal ranged from 69 percent to 94 percent with an average of 87 percent. No rank rating of the subjects was made, the only criterion was psychological fitness, and none of the subjects was found to be psychologically unfit. Author

EFFECT OF EMOTIONAL STRESS ON HEMOSTASIS SYSTEM OF HEALTHY PERSONS Abstract Only
Y. I. SOKOLOV, T. P. KHOVANSKAYA, I. V. NOVIKOV, and M. V. BALUDA *In its* USSR Rept.: Life Sci. Biomed. and Behavioral Sci. (JPRS-UBB-85-023) p 62 18 Sep. 1985 Transl. into ENGLISH from Fiziol. Cheloveka (Moscow), v. 11, no. 1, Jan. - Feb. 1985 p 79-82
Avail: NTIS HC A06

The effect of emotional stress on activity of the sympatho-adrenal system and of some indicators of the system of thrombocytic-vascular and plasma links of hemostasis was studied. Emotional stress of the subjects caused increase of catecholamines in the blood and increases of excretion of them in the urine and activation of the anticoagulation system and increase of the blood heparin level while the fibrinolytic activity increased and the fibrogen concentration in the blood decreased. Thromboelastograms recorded in the first phase of coagulation showed a tendency toward hypocoagulation in the subjects, under emotional stress. Emotional stress shows a tendency toward the increase of heparin tolerance of the plasma but does not change the ADP-induced aggregation of thrombocytes. E.A.K.

STUDIES ON HUMAN VEHICLE CONTROL
H. GODTHELP 1984 159 p refs
(B8563352) Avail: Issuing Activity

The accuracy of closed and open loop steering were measured in a reproduction task. Precognitive control aspects of open and closed loop steering in a lane change maneuver were studied. Preview control in open and closed loop steering on entering a bend was investigated. Straight lane keeping compensatory control and the limits of error neglecting in lane keeping were examined. For closed loop conditions, amplitude accuracy is linearly dependent on movement velocity, illustrating the validity of Fitts' law for continuous, closed loop movements. However, for open loop conditions the results indicate the amplitude accuracy to depend only on movement amplitude and not on velocity. Driver's self-chosen occlusion times correspond closely with time of lane crossing. Author (ESA)

CAR DRIVING AS A SUPERVISORY CONTROL TASK
G. J. BLAAUW 1984 139 p refs
(B8563351) Avail: Issuing Activity

Car driving was analyzed using a supervisory driver model. The driver is assumed to supervise single tasks like lateral and longitudinal vehicle control, each of which is assumed to be autonomously controlled. The driver only intervenes when the conditions of a single task force him to. An integral description of multitask performance in driving is possible. An observation/prediction block, a control block and a decision-making block are distinguished. Results suggest that lateral control does not need continuous foveal visual information. In conditions creating

a minimum level of attention for lateral control, skilled and unskilled drivers show an acceptable stay within their lane, although variations in lateral control are larger than in other conditions. Performance during occlusion is not much affected in relation to multitask or deteriorated driving conditions. However, skilled drivers choose longer occlusion times than the unskilled drivers for comparable levels of driving performance. Author (ESA)

THE SYNTHESIS AND ANALYSIS OF COLOR IMAGES
B. A. WANDELL Sep. 1985 37 p refs
(NASA-TM-86844; REPT-85419; NAS 1.15:86844) Avail: NTIS HC A03/MF A01 CSCL 05I

A method is described for performing the synthesis and analysis of digital color images. The method is based on two principles. First, image data are represented with respect to the separate physical factors, surface reflectance and the spectral power distribution of the ambient light, that give rise to the perceived color of an object. Second, the encoding is made efficient by using a basis expansion for the surface spectral reflectance and spectral power distribution of the ambient light that takes advantage of the high degree of correlation across the visible wavelengths normally found in such functions. Within this framework, the same basic methods can be used to synthesize image data for color display monitors and printed materials, and to analyze image data into estimates of the spectral power distribution and surface spectral reflectances. The method can be applied to a variety of tasks. Examples of applications include the color balancing of color images, and the identification of material surface spectral reflectance when the lighting cannot be completely controlled.

EXTENDED ANALYSIS OF THE STRUCTURE OF ERROR SCORES IN PSYCHOLOGICAL APTITUDE TESTS
K. M. GOETERS Mar. 1985 50 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-943)
(DFVLR-FB-85-20; ISSN-0171-1342) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 16.50

A series of psychological aptitude tests was analyzed with respect to human performance and reliability. A factor analysis of the test scores reveals five components of performance. Three independent error components are extracted: errors in quick visual detection of targets; difficulties in mental processing of numbers and symbols; and erroneous actions under performance stress. All three factors are the expression of a deficient control of performance. They are discussed as functional aspects of decision making and human information processing. Author (ESA)

SPEED OF WORK AND ERROR RATE: ANALYSES OF INDIVIDUAL DIFFERENCES IN A CHOICE REACTION SERIES WITH A COGNITIVE COMPONENT
K. M. GOETERS Mar. 1985 27 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-944)
(DFVLR-FB-85-21; ISSN-0171-1342) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 10.50

A visual choice reaction test with a cognitive component was introduced to measure response processes in more detail than is possible with summarizing scoring of paper pencil tests. For each reaction the following information was registered: stimulus (light), reaction (right/wrong), reaction time, and omission (yes/no). Each subject had to react on 320 successive signals without pause. From the reaction protocol of each subject indices for speed of work, oscillation of performance, error disposition, and reaction inhibition were computed. The main result is that in this reaction test speed of work and error disposition are not coupled. Errors are not a consequence of quick reactions. The observed errors seem to be the expression of an increased variation in performance. The results are discussed with a view to a psychophysiological model of activation. Author (ESA)

PATH ERROR-NEGLECTION IN STRAIGHT LANE DRIVING
J. GODTHELP Oct. 1984 21 p refs
(IZF-1984-32; TDCK-79698) Avail: NTIS HC A02/MF A01

Decision rules, describing how drivers switch from error-neglection to error-correction when approaching the edge of a lane, were derived for a straight lane keeping task. Drivers were instructed to neglect the vehicle path error and to switch over to error-correction only at that moment. The vehicle motion still could comfortably be corrected to prevent a crossing of the

lane boundary. The results show that the lateral distance from the lance boundary at which drivers switch to error-correction increases linearly with the lateral approach speed. This mechanism results in a constant time to lane crossing distance at this decision moment, this result being consistant for a broad range of speeds. Author (ESA)

VISUAL INFORMATION TRANSFER. PART 1: ASSESSMENT OF SPECIFIC INFORMATION NEEDS. PART 2: PARAMETERS OF APPROPRIATE INSTRUMENT SCANNING BEHAVIOR Progress Report, 15 Feb. - 15 Oct. 1985
J. R. COMSTOCK, JR., R. H. KIRBY, and G. D. COATES Oct. 1985 11 p refs
(Contract NAG1-451)
(NASA-CR-176277; NAS 1.26:176277) Avail: NTIS HC A02/MF A01

The present study explored eye scan behavior as a function of level of subject training. Oculometric (eye scan) measures were recorded from each of ten subjects during training trials on a CRT based flight simulation task. The task developed for the study incorporated subtasks representative of specific activities performed by pilots, but which could be performed at asymptotic levels within relatively short periods of training. Changes in eye scan behavior were examined as initially untrained subjects developed skill in the task. Eye scan predictors of performance on the task were found. Examination of eye scan in proximity to selected task events revealed differences in the distribution of looks at the instruments as a function of level of training. Author

CSCL 05J

Traditional approaches to understanding motivation have not been successful. Middle range theories are necessary for progress in this area. Cognitive processes will play a major role in motivation theories of the future. Various middle range theories are likely to be more suitable for understanding some dependent variables than others. The work on adaptive motivation theory was intended to be preliminary, exploring the possible advantages of a reconceptualization of motivation theory. In this report, we see our goal as introducing some lines of speculation, sampling some recent research that gives rise to that speculation, and presenting specimens of new theory and research designs and, ultimately, persuading the reader to pick up the burden of a novel idea or approach and to carry it some distance for us. Various technical and quarterly reports have detailed the development of questionnaires and methods of measuring components of adaptive motivation theory. In this report, we identify the nature and extent of that conceptual work. In effect, we suggest that it may be valuable to explore more deeply the cognitive roots of many of the current approaches. Through such an exploration, it may be possible to develop a set of middle range theories capable, in aggregate, of explaining motivated behavior. GRA

CSCL 06E

Wing and Kristofferson (1973) have proposed a two-stage model of timing in repetitive motor behavior which assumes independence of a central timekeeper process and the peripheral implementation system. This model was tested with a patient who has incurred a peripheral motor neuropathy. The patient's inconsistent performance in a periodic tapping task with the afflicted hand was found to be attributable to increased variability in the motor implementation process only. This report, in conjunction with the previous study of Wing et al., (1984) in which a Parkinsonian patient was found to have a timekeeper deficit, provides a double dissociation of the timekeeper and implementation processes. Thus, the independence assumption of the Wing and Kristofferson model is supported. GRA

PSYCHOLOGICAL ASPECTS OF PERSONNEL CONTAMINATION
R. L. WILSON Apr. 1985 7 p refs Presented at the Hazardous Mater. Conf., Oakland, Calif., 23 Apr. 1985
(Contract W-7405-ENG-48)
(DE85-012955; UCRL-92501; CONF-8504140-1) Avail: NTIS HC A02/MF A01

This paper discusses some of the major emotional considerations involved in the treatment of people who have been contaminated with potentially hazardous materials. Although the principal focus is the treatment of people trained to work with these materials, an attempt is also made to extend these methods to people having little or no knowledge of such matters. Accidents always result in emotional trauma. When the accident involves radioactive or other potentially toxic, carcinogenic, or mutagenic materials, there is a possibility of enhanced emotional stress due to the mystique surrounding these substances. Several psychological principles that have emerged from the treatment of radioactively contaminated workers are: (1) provide preaccident training for all radiation workers; (2) avoid secrets; (3) as rapidly as possible following a contamination accident, bring the worker into contact with others; (4) recognize the emotions of the family and the family's fears and trauma; and (5) do not desert the worker after decontamination has been completed. NONINVASIVE DOPPLER DETERMINATION OF CARDIAC OUTPUT DURING SUBMAXIMAL AND PEAK EXERCISE
J. G. SHAW, E. C. JOHNSON, W. F. VOYLES, and E. R. GREENE (Lovelace Medical Foundation; New Mexico, University, Albuquerque, NM) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Sept. 1985, p. 722-731. refs

Stroke volume (SV) and cardiac output (CO) were measured as a function of work load by a pulsed Doppler (PD) technique, obtaining the Doppler-shifted frequency from the ascending aorta of 10 sitting subjects who were exercized on an ergometer to exertion. The PD-generated CO and CV values in 207 determinations were assessed for technical reproducibility of the PD method, and compared with the literature values obtained by standard invasive methods. Technical reproducibility was estimated by comparing with paired t test the differences between 65 duplicate serial measurements of CO and CV. No significant differences (P less than 0.001) were found. Absolute values of CO and CV understimated the literature values across all work loads by 15 to 21 percent. Possible factors for these differences are discussed. I.S.

HIERARCHY OF CONTROL MODELS FOR TEMPERATURE REGULATION
J. WERNER (Bochum, Ruhr-Universitaet, West Germany) International Journal of Modelling and Simulation (ISSN 0228-6203), vol. 5, no. 2, 1985, p. 58-63. refs
(Contract DFG-SFB-114)

Five different mathematical models for the control loop regulating human body temperature are reviewed, along with possible applications. A one-loop model for passive control has exhibited promise for understanding steady-state thermoregulation and the fever process. Core-shell models describe heat flow and are particularly well-suited to studying the effects of workload on thermoregulation. Multi-element (layer) models treat the body as a collection of cylinders arranged in concentric layers, each coupled by circulation, and allowing depiction of the dynamics of thermoregulation. Multi-element (circle) models portray body segments as cylinders coupled by a one-loop circulatory system, permitting examination of the radial dependencies of temperature within the body. Finally, three-dimensional models are applied in analyses of the distributed parameter control system, and are an approach to the nonlinear properties of the biological control loop. Effective use of the models requires access to fast, large capacity computers. M.S.K.

A86-10263
THERMAL INSULATING CAPABILITIES OF 'THIN' CLOTHING INSULATION
W. C. KAUFMAN and D. J. BOTHE (Wisconsin, University, Green Bay) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Oct. 1985, p. 1011-1013. Research supported by the Eddie Bauer Co. and Gillette Industries. refs

Swatches and sleeping bags composed of polyolefin, down and polyester were placed over a heat source to test the thermal insulating properties of the materials. Thermistors on each side of the cloth furnished temperature data. The data were analyzed by an equation which took into account the presence of an air layer, which is classically thought to enhance the insulating properties. The polyolefin fibers did not exhibit superior insulating properties beyond those available from any thin fabric. The air layer/down loft was the principal agent of increased insulation. M.S.K.

HEMODYNAMIC EFFECTS OF ANTI-G SUIT INFLATION IN A 1-G ENVIRONMENT
J. F. SEAWORTH, T. J. JENNINGS, L. L. HOWELL, J. W. FRAZIER, C. D. GOODYEAR (USAF, Aerospace Medical Research Laboratory and Medical Center, Wright-Patterson AFB, OH) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Oct. 1985, p. 1145-1151. refs

The effect of anti-G suit inflation on cardiac volumes, cardiac output, and peripheral vascular resistance was assessed. Two-dimensional echocardiography was used to measure end-diastolic and end-systolic volumes at rest and after inflation of the anti-G suit with pressures of 2, 4, and 6 psi in 10 male subjects in both standing and supine positions. In the supine position, mean arterial pressure increased from base-line for all three inflation pressures. The end-diastolic volume increased after 2-psi inflation. Cardiac output or stroke volume did not change. After standing, mean arterial pressure, end-diastolic volume, and stroke volume fell after suit deflation. Peripheral vascular resistance fell in the 2and 4-psi inflation profiles. In the standing protocol, mean arterial pressure, end-diastolic volume, stroke volume, and cardiac output rose with all three inflation pressures. After reclining, heart rate increased and mean arterial pressure fell in the 4- and 6-psi inflation profiles after suit deflation. C.D.

VIBRATION TRANSMISSIBILITY IN SEATED SUBJECTS
M. K. VYAWAHARE and D. T. SHAKUNTHALA (Indian Air Force, Institute of Aviation Medicine, Bangalore, India) Aviation Medicine, vol. 28, Dec. 1984, p. 162-170. refs

Vibration transmissibility at shoulder and thigh levels in upright seated individuals with respect to seat vibration is determined. The electrohydraulic vibrator, seat, cockpit, piezoelectric accelerometer, and vibration meter used in the experiment are described. The procedures for testing shoulder and thigh vibration transmissibility in subjects seated directly on a seat, on a compressible cushion, on a fiber glass pad, and on a fiber glass pad plus a fiber glass back rest are explained. The vibration transmission was measured and the results for the mean value of thigh and shoulder level vibration transmissibility and maximum thigh and shoulder level vibration transmissibility versus body weight are tabularly presented. The data is explained and it is concluded that vibration intensity at thigh and shoulder levels of a seated upright subject is less than at the seat level. I.F.

THE INFLUENCE OF TACTUAL SEAT-MOTION CUES ON TRAINING AND PERFORMANCE IN A ROLL-AXIS COMPENSATORY TRACKING TASK SETTING Ph.D. Thesis
E. A. MARTIN 1985 327 p
Avail: Univ. Microfilms Order No. DA8510600

A considerable body of knowledge exists regarding the influence of whole-body motion on the control behavior and task performance of a vehicle operator required to compensate for the effects of unexpected external disturbances. The research described was conducted to determine whether similar effects would be observed if the motion information were tactually displayed through the seat pan, rather than in a whole-body motion environment. The experiment was designed such that the transfer of training from a tactual dynamic seat display to a whole-body motion environment could also be evaluated. The environmental task required subjects to regulate for a random-appearing, roll-axis disturbance in a simulated vehicle having aircraft-like dynamics. A centrally located compensatory display, subtending about nine degrees, provided visual roll error information. Control inputs were made via a right side-arm isometric controller. The two-phase experiment included a training phase and a criterion phase. The data clearly demonstrate that a dynamic sea pan can effectively impart motion information. Dissert. Abstr.

TEMPUS: SIMULATING PERSONNEL AND TASKS IN A 3-D ENVIRONMENT Final Report
N. I. BADLER and J. D. KOREIN 31 May 1985 18 p
(Contract NAS9-16634)
(NASA-CR-171901; NAS 1.26:171901) Avail: NTIS HC A02/MF A01 CSCL 05H

The latest TEMPUS installation occurred in March, 1985. Another update is slated for early June, 1985. An updated User's Manual is in preparation and will be delivered approximately mid-June, 1985. NASA JSC has full source code listings and internal documentation for installed software. NASA JSC staff has received instruction in the use of TEMPUS. Telephone consultations have augmented on-site instruction. G.L.C.

EFFECT OF INCREASED BODY CLOTHING INSULATION ON HAND TEMPERATURE IN A COLD ENVIRONMENT
S. D. LIVINGSTONE, R. W. NOLAN, and S. W. CATTROLL Dec. 1984 17 p
(AD-A156597; DREO-TN-84-26) Avail: NTIS HC A02/MF A01 CSCL 06Q

Thermal protection of personnel who must remain relatively inactive while performing tasks outdoors in the cold is a continuing problem. Provision of comfort and allowing for mobility are design difficulties experienced by persons working in the cold at tasks

for which manual dexterity is required is In such situations only very light handwear can be worn and often, mitts or gloves must be removed in order to perform the task. A particular example of such a task exists at the CF Satellite Tracking and Identification Unit at St. Margaret's, New Brunswick. The telescope which is used for tracking satellites is located outdoors when operational. To minimize optical interference, the area around the telescope cannot be heated in winter. During the course of the tracking sequence, which takes about 30 minutes, the operator must be in contact with the large metal mass of the telescope. In addition, the operation of the steering control button requires that if any handwear is worn, it must be very thin. Operating temperatures as low as -20 C are often experienced. It was found that, as predicted, if additional insulation was applied to the whole body of the man, the temperature of his hands could be maintained for a longer period of time. GRA

MILD HYPOXIA AND VISUAL PERFORMANCE WITH NIGHT VISION GOGGLES M.S. Thesis
L. L. LEBER May 1985 57 p
(AD-A156969; AD-E950724; AFIT/CI/NR-85-35T) Avail: NTIS HC A04/MF A01 CSCL 06E

Pilots have frequently reported an apparent darkening of the visual field while flying at high altitude without supplemental oxygen, and subsequent exposure to oxygen resulted in marked increases in the brightness of lights. Likewise, at low light intensities visual acuity is greatly decreased during oxygen deprivation. In contrast, at high light intensities, the effect of moderate oxygen deprivation on visual acuity is slight. Even though the Night Vision Goggles (NVGs) amplify low night illumination, the interaction between amplified illumination and high altitude effects may provide to be important factors in visual performance. The objective of this research was to investigate the effects of mild hypoxid aon monocular visual performance with NVGs. This study revealed that mild oxygen deprivation significantly affects unaicied square-0wave grating visual acuity but does not significantly affect NVG-augmented performance. Large differences between visual sensitivities at different spatial frequencies were not differentially affected by mild hypoxia. Supplemental oxygen did significantly improve naked-eye but not NVG-augmented night resolution acuity up to an altitude of 13,000 feet (3,692 m) above sea level (ASL). GRA

A GRAPHIC ANTHROPOMETRIC AID FOR SEATING AND WORKPLACE DESIGN
K. C. HENDY, K. W. ANDERSON, and D. M. DRUMM Apr. 1984 60 p
(AD-A156988; AD-E950724; ARL/SYS-R-29) Avail: NTIS HC A04/MF A01 CSCL 06N

In recent workplace design projects at ARL, a procedure for the use of anthropometric information has be developed which relies on the use of sets of anthropometric data from individuals rather than the conventionally used pooled data. This report describes a graphic anthropometric design aid which has been devised to assist in the implementation of this procedure. The aid predicts the positions, in side elevation, of certain cardinal points which are considered to be important to the design process, viz, the eye, thumb tip reach, knee point, seat reference point and heel point. This report also contains details of the design aid's validation, the concept of the aid's use and the fidelity of the aid within the design process. GRA

MECHANICAL ACCESSORIES FOR MOBILE TELEOPERATORS
M. J. FELDMAN and J. N. HERNDON 1985 19 p Presented at the Workshop on Requirements of Mobile Teleoperators for Radiol. Emergency Response and Recovery, Dallas, 23 Jun. 1985
(Contract DE-AC05-84OR-21400)
(DE85-014310; CONF-8506148-2) Avail: NTIS HC A02/MF A01

The choice of optimum mechanical accessories for mobile teleoperators involves matching the criteria for emergency response with the available technology. A general background is presented to teleoperations, a potpourri of the manipulator systems available, and an argument for force reflecting manipulation. The theme presented is that the accomplishment of humanlike endeavors in hostile environments will be most successful when man model capabilities are utilized. The application of recent electronic technology to manipulator development has made new tools available to be applied to emergency response activities. The development activities described are products of the Consolidated Fuel Reprocessing Program at the Oak Ridge National Laboratory. DOE

RADIATION CHEMISTRY OF AN AQUEOUS SOLUTION OF GLYCINE COMPOUNDS OF INTEREST TO CHEMICAL EVOLUTION STUDIES
Z. D. DRAGANIC, S. I. VUJOSEVIC (Universidad Nacional Autonoma de Mexico, Mexico City), and V. NIKETIC (Beograd, Univerzitet, Belgrade, Yugoslavia) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 82-90. Research supported by the Serbian Research Fund. refs

An examination has been conducted of the radiolysis of an O2-free aqueous solution of glycine at absorbed doses of Co-60 gamma-radiation of up to 20 Mrad. At least 20 compounds are formed during radiolysis, among them several amino acids, an

oligoamine, and the nitrogen-free polymers (Mw equal to or less than 28,000 daltons). When dicyandiamide is present in the solution of glycine, various nitrogen-containing products, including some polymers (Mw equal to or less than 12,000 daltons), are synthesized along with radiolytic products of glycine; polyglycines are not formed. The radiation-chemical yields of radiolytic-product formation and of decomposition of glycine have been determined and possible free-radical reactions leading to the radiation-induced changes observed have been considered. COULD LIFE HAVE ARISEN IN THE PRIMITIVE ATMOSPHERE?
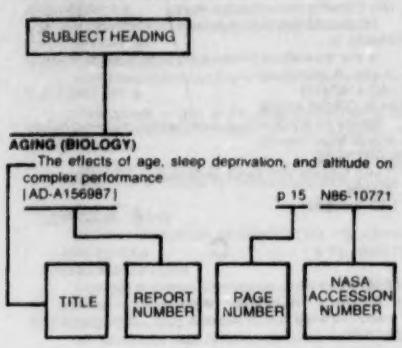
S. SCHERER (Konstanz, Universitaet, Constance, West Germany) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 91-94. refs

A model developed in connection with a modification and extension of concepts proposed by Oparin (1924) provides currently the basis for almost all attempts to explain the origin of life. However, in spite of the common acceptance of the Oparin model, Woese (1979, 1980) has rejected the Oparin thesis and proposed a completely new hypothesis on the origin of life. The present communication provides a fundamental critique of the alternative model suggested by Woese, Woese had assumed that the progenitors of life originated in the atmosphere. A number of arguments against the new model are discussed. These arguments are related to the presence of free oxygen and ultraviolet radiation, convection cycles, the suspension time of droplets, and the consideration of chemical limits. G.R.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Biotechnology regulation
[GPO-43-778] p 3 N86-10733
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738
Biotechnology: Science and practice p 4 N86-10742
BLACKOUT (PHYSIOLOGY)
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
BLOOD CIRCULATION
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure p 5 N86-10760
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
BLOOD FLOW
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
BLOOD PLASMA
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
BLOOD PRESSURE
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
BLUE GREEN ALGAE
Utilization of non-conventional systems for conversion of biomass to food components: Potential for utilization of algae in engineered foods
[NASA-CR-176257] p 6 N86-11830
BODY TEMPERATURE
Hierarchy of control models for temperature regulation p 22 A86-10158
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
BODY VOLUME (BIOLOGY)
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
BONE DEMINERALIZATION
The skeleton in space p 10 A86-11833
BRAIN
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
TV monitoring control system in electrophysiological studies p 14 N86-10765
Is the cerebellum involved in motor and perceptual timing: A case study
[AD-A157452] p 16 N86-11842
BRAIN CIRCULATION
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108
BRIGHTNESS
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787

C

CAFFEINE
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
CALCIUM
Controlled environment life support system: Calcium-related leaf injuries on plants
[NASA-CR-176288] p 6 N86-11829
CAMERAS
Teleoperator human factors study
[NASA-CR-176310] p 23 N86-11854
CANCER
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014895] p 17 N86-11846
CARBOHYDRATE METABOLISM
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
CARBON
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013986] p 18 N86-11849
CARDIOLOGY
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
Electrocardiographic changes in serious decompression sickness p 2 A86-10254
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428
CARDIOVASCULAR SYSTEM
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog p 2 A86-10255
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428
Capacity for work and hemodynamics in males residing at middle and high latitudes p 13 N86-10747
Individual typological self-regulation of cardio-vascular system p 13 N86-10752
Classification of changes in electrocardiogram during muscular exertion of healthy individuals p 14 N86-10755
CAROTID SINUS BODY
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108
CATECHOLAMINE
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
CELLS (BIOLOGY)
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845

CENTRAL NERVOUS SYSTEM
Homocarnosin in rat brain during adaptation to cold
p 5 N86-10762
Cognitive science program: Dissociation of the central timekeeper and the peripheral implementation processes in repetitive movements
[AD-A157542] p 21 N86-11852
CEREBELLUM
Is the cerebellum involved in motor and perceptual timing: A case study
[AD-A157452] p 16 N86-11842
CHARTS
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10778
CHEMICAL EVOLUTION
New perspectives on bacterial ferredoxin evolution
p 2 A86-12001
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies
p 23 A86-12003
CHEMICAL TESTS
Medical evaluation of cosmonauts - Biochemical investigations p 11 A86-12433
CHEMORECEPTORS
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
CHLORPROMAZINE
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
CHOLINE
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754
CHOLINESTERASE
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
CHROMOSOMES
Study of hypokinesia and acceleration effects on human chromosomes p 12 N86-10740
Relationship between alkylation sites and induction of dominant lethals and heritable translocations in mice
[DE85-014309] p 7 N86-11835
CIRCADIAN RHYTHMS
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
CIVIL AVIATION
Airline pilot disability - The continued experience of a major U.S. airline p 8 A86-10251
Airsickness among Indian Airlines passengers
p 12 A86-12435
CLINICAL MEDICINE
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
CLOSED ECOLOGICAL SYSTEMS
Controlled environment life support system: Calcium-related leaf injuries on plants
[NASA-CR-176288] p 6 N86-11829
COCHLEA
A differential evaluation of the mechanism of the effect of noise on the ear in relation to noise frequency characteristics (Clinical and experimental study)
p 10 A86-11750
COGNITION
Psychological Sciences Division 1984 programs
[AD-A156831] p 20 N86-10779
Adaptive motivation theory
[AD-A157440] p 21 N86-11851
COLD ACCLIMATIZATION
Characteristics of external respiration in inhabitants of the northeastern USSR p 9 A86-10698
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
Individual typological features of autonomic reactions during autogenic training in polar expedition members in period of wintering in Antarctica p 13 N86-10748
Adaptation of man to extreme conditions of Antarctica
p 13 N86-10751
Homocarnosin in rat brain during adaptation to cold
p 5 N86-10762
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
COLD TOLERANCE
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice
p 5 N86-10766
COLD WATER
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
COLOR
The synthesis and analysis of color images
[NASA-TM-86844] p 20 N86-10777
COMFORT
The wearing comfort of the PVC: Combat back pack
[IZF-1984-34] p 23 N86-10789
COMPENSATORY TRACKING
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784
COMPUTER GRAPHICS
TEMPUS: Simulating personnel and tasks in a 3-D environment
[NASA-CR-171901] p 22 N86-10785
COMPUTER PROGRAMS
TEMPUS: Simulating personnel and tasks in a 3-D environment
[NASA-CR-171901] p 22 N86-10785
COMPUTERIZED SIMULATION
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
TEMPUS: Simulating personnel and tasks in a 3-D environment
[NASA-CR-171901] p 22 N86-10785
CONGRESSIONAL REPORTS
Biotechnology regulation
[GPO-43-778] p 3 N86-10733
CONTAMINATION
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853
CONTRACT MANAGEMENT
LSRO/ONR ad hoc review process
[AD-A156590] p 4 N86-10735
CONTRACTION
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
CONTRACTS
LSRO/ONR ad hoc review process
[AD-A156590] p 4 N86-10735
CONTRAST
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10778
CONTROL THEORY
Hierarchy of control models for temperature regulation
p 22 A86-10158
Car driving as a supervisory control task
[B8563351] p 19 N86-10776
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784
CONTROLLED ATMOSPHERES
Dynamics of general resistance of rats during readaptation period after training in altered gas environment p 6 N86-10767
CORIOLIS EFFECT
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
CORTICOSTEROIDS
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice
p 5 N86-10766
COSMONAUTS
Medical evaluation of cosmonauts - Psychological testing p 19 A86-12431
Dental evaluation of cosmonauts p 11 A86-12432
Medical evaluation of cosmonauts - Biochemical investigations p 11 A86-12433
CROP GROWTH
Controlled environment life support system: Calcium-related leaf injuries on plants
[NASA-CR-176288] p 6 N86-11829

D

DEACTIVATION
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
DECISION MAKING
Psychological Sciences Division 1984 programs
[AD-A156831] p 20 N86-10779
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
Path error-neglection in straight lane driving
[IZF-1984-32] p 20 N86-10783
DECOMPRESSION SICKNESS
Electrocardiographic changes in serious decompression sickness p 2 A86-10254
DECONDITIONING
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257
DECONTAMINATION
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853
DENTISTRY
Dental evaluation of cosmonauts p 11 A86-12432
DEOXYRIBONUCLEIC ACID
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737
Relationship between alkylation sites and induction of dominant lethals and heritable translocations in mice
[DE85-014309] p 7 N86-11835
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
Prospects for DNA methods to measure human heritable mutation rates
[DE85-014555] p 17 N86-11847
DEPRIVATION
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
DISPLACEMENT
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838
DIURESIS
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
DIURNAL VARIATIONS
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
DOPPLER EFFECT
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise
p 21 A86-10102
DOSAGE
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014695] p 17 N86-11846
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853
DRAINAGE
Kinetics of biological ferrous iron oxidation
[DE85-014616] p 4 N86-10736
DRUGS
Mechanism of adaptogenic action of prickly eleuterococcus on man during heat stress
p 14 N86-10757
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
DYNAMIC RESPONSE
Determination of symmetry and phase in human visual response functions: Theory and experiments
p 15 N86-10769

E

EARTH (PLANET)
Structure and function of isozymes: Evolutionary aspects and role of oxygen in eucaryotic organisms
[NASA-CR-176286] p 6 N86-11831
ECOLOGY
Adaptation of man to extreme conditions of Antarctica
p 13 N86-10751
EFFECTIVENESS
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
ELECTROCARDIOGRAPHY
Electrocardiographic changes in serious decompression sickness p 2 A86-10254
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness
p 12 N86-10746
Individual typological self-regulation of cardio-vascular system p 13 N86-10752
ELECTROENCEPHALOGRAPHY
Prestimulus EEG and evoked potentials in man during the recognition of a meaningful light stimulus
p 9 A86-10697
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434

TV monitoring control system in electrophysiological studies p 14 N86-10765
Variability analysis of visually induced responses in the midst of noise
[B8564052] p 16 N86-10774

ELECTROMAGNETIC FIELDS
Effect of single actions of weak electromagnetic fields of ultralow frequency on indices of endocrine system p 12 N86-10744
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839

ELECTROMAGNETIC RADIATION
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738

ELECTROPHYSIOLOGY
TV monitoring control system in electrophysiological studies p 14 N86-10765

ELEVATION
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

EMITTERS
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845

EMOTIONS
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853

ENDOCRINE SYSTEMS
Effect of single actions of weak electromagnetic fields of ultralow frequency on indices of endocrine system p 12 N86-10744

ENDOTHELIUM
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101

ENZYME ACTIVITY
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
Romanian plant produces protein concentrate from paraffin-nourished yeasts p 4 N86-10741
Biotechnology: Science and practice p 4 N86-10742

EPILEPSY
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434

EPINEPHRINE
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754

ERROR ANALYSIS
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780

ERYTHROCYTES
Effect of inclusion of supplementary ascorbic acid in daily diet on degree of vitamin saturation of body and thermoresistance of erythrocytes while working in arid zone p 13 N86-10749
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Neuronal reactions and evoked potentials in the subcortical brain structures in the process of visual recognition. I Formulation of the problem and basic methods for its solution p 9 A86-10696
Prestimulus EEG and evoked potentials in man during the recognition of a meaningful light stimulus p 9 A86-10697

EXERCISE PHYSIOLOGY
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
Indicators of external respiration in young athletes during adaptation to high environmental temperature p 9 A86-10699
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
Physiological effects of training
[AD-A157417] p 16 N86-11841

EXOBIOLOGY
Life sciences research on the space station: An introduction
[NASA-TM-86836] p 3 N86-10734
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 275)
[NASA-SP-7011(275)] p 15 N86-10768

EXPIRED AIR
Conditioning potentialities of respiratory apparatus p 14 N86-10753

EXPOSURE
Approaches to quantitative expression of dose response
[DE85-013498] p 15 N86-10772
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848

EYE (ANATOMY)
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

EYE DOMINANCE
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750

EYE MOVEMENTS
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850

F

FABRICS
Thermal insulating capabilities of 'thin' clothing insulation p 22 A86-10263

FALLOUT
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014695] p 17 N86-11846

FATIGUE (BIOLOGY)
Eye-movement activity as index of functional state of brain p 14 N86-10756

FEEDBACK CONTROL
Studies on human vehicle control
[B8563352] p 19 N86-10775

FEMALES
Testosterone and muscle hypertrophy in female rats p 2 A86-12026

FERMENTATION
Biotechnology: Science and practice p 4 N86-10742

FERTILIZATION
Relationship between alkylation sites and induction of dominant lethals and heritable translocations in mice
[DE85-014309] p 7 N86-11835

FETUSES
Teratogenic effects of microwave radiation
[PB85-207462] p 7 N86-11837

FIBER OPTICS
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838

FIGHTER AIRCRAFT
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157

FLIGHT ALTITUDE
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787

FLIGHT FITNESS
Behavioral Airsickness Management program for student pilots p 18 A86-10258
Medical evaluation of cosmonauts - Assessment of vestibular system p 11 A86-12429

FLIGHT SIMULATION
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850

FLIGHT TRAINING
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850

FLOW VELOCITY
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108

FLYING PERSONNEL
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750

FOOD PROCESSING
Utilization of non-conventional systems for conversion of biomass to food components: Potential for utilization of algae in engineered foods
[NASA-CR-176257] p 6 N86-11830

FORMALDEHYDE
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848

G

GANGLIA
Is the cerebellum involved in motor and perceptual timing: A case study
[AD-A157452] p 16 N86-11842

GAS TRANSPORT
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103

GENETIC ENGINEERING
Biotechnology regulation
[GPO-43-778] p 3 N86-10733
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737

GENETICS
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737
Positive genetic hazard predictions from short-term tests have proved false for results in mammalian spermatogonia with all environmental chemicals so far tested
[DE85-013640] p 6 N86-11833

GLOVES
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786

GLYCINE
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies p 23 A86-12003

GRAPHIC ARTS
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

GRAVITATIONAL PHYSIOLOGY
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379

GROWTH
Testosterone and muscle hypertrophy in female rats p 2 A86-12026

GUN PROPELLANTS
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985
[AD-A157623] p 17 N86-11844

H

HAND (ANATOMY)
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786

HAZARDS
Biotechnology regulation
[GPO-43-778] p 3 N86-10733

HEADACHE
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108

HEALTH
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839

HEALTH PHYSICS
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
HEARING
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750
HEART FUNCTION
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness p 12 N86-10746
HEART MINUTE VOLUME
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102
HEART RATE
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness p 12 N86-10746
HEAT ACCLIMATIZATION
Indicators of external respiration in young athletes during adaptation to high environmental temperature p 9 A86-10699
Adaptation of the human organism to the repeated short-term exposures to a hot environment p 10 A86-10701
Mechanism of adaptogenic action of prickly eleuterococcus on man during heat stress p 14 N86-10757
HEAT STROKE
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency [AD-A157620] p 6 N86-11832
HEAT TOLERANCE
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101
Effect of inclusion of supplementary ascorbic acid in daily diet on degree of vitamin saturation of body and thermoresistance of erythrocytes while working in arid zone p 13 N86-10749
HEAT TRANSFER
Heat transfer mechanism in human extremities p 14 N86-10759
HEATING
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
HEMATOLOGY
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103
HEMATOPOIESIS
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
HEMODYNAMIC RESPONSES
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog p 2 A86-10255
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12426
Changes in the vascular functions of skeletal muscles due to acute hypothermia p 3 A86-12522
Hemodynamics during gravitational overloads (mathematical modeling) p 12 N86-10739
Capacity for work and hemodynamics in males residing at middle and high latitudes p 13 N86-10747
HEREDITY
Prospects for DNA methods to measure human heritable mutation rates [DE85-014555] p 17 N86-11847
HIGH TEMPERATURE ENVIRONMENTS
Life at high temperatures p 2 A86-11802
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency [AD-A157620] p 6 N86-11832
HOMEOSTASIS
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
HORMONE METABOLISMS
Serum levels of eleven steroid hormones following motion sickness p 2 A86-10259
Testosterone and muscle hypertrophy in female rats p 2 A86-12026
HORMONES
Effect of single actions of weak electromagnetic fields of ultralow frequency on indices of endocrine system p 12 N86-10744
HUMAN BEHAVIOR
Individual typological features of autonomic reactions during autogenic training in polar expedition members in period of wintering in Antarctica p 13 N86-10748
Adaptive motivation theory [AD-A157440] p 21 N86-11851
HUMAN BEINGS
Detection of chromosomal abnormalities in human sperm [DE85-014178] p 7 N86-11834
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954 [DE85-014695] p 17 N86-11846
Prospects for DNA methods to measure human heritable mutation rates [DE85-014555] p 17 N86-11847
HUMAN FACTORS ENGINEERING
The synthesis and analysis of color images [NASA-TM-86844] p 20 N86-10777
Teleoperator human factors study [NASA-CR-176310] p 23 N86-11854
HUMAN PERFORMANCE
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
The effects of age, sleep deprivation, and altitude on complex performance [AD-A156987] p 15 N86-10771
Studies on human vehicle control [B8563352] p 19 N86-10775
Car driving as a supervisory control task [B8563351] p 19 N86-10776
Standardization of tasks: Approach planning -- human performance assessment [IZF-1984-19] p 20 N86-10782
Cognitive science program: Dissociation of the central timekeeper and the peripheral implementation processes in repetitive movements [AD-A157542] p 21 N86-11852
HUMAN REACTIONS
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
HUMAN TOLERANCES
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750
HYDROXYL RADICALS
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985 [AD-A157623] p 17 N86-11844
HYPERCAPNIA
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
Dynamics of general resistance of rats during readaptation period after training in altered gas environment p 6 N86-10767
HYPEROXIA
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog p 2 A86-10255
HYPERPNEA
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
HYPERTENSION
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
HYPERTHERMIA
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
HYPODYNAMIA
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
HYPOKINESIA
Study of hypokinesia and acceleration effects on human chromosomes p 12 N86-10740
HYPOTHERMIA
Changes in the vascular functions of skeletal muscles due to acute hypothermia p 3 A86-12522
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
HYPOXIA
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256
The effects of mild hypoxia on a logical reasoning task p 18 A86-10261
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure p 5 N86-10760
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
Dynamics of general resistance of rats during readaptation period after training in altered gas environment p 6 N86-10767
Mild hypoxia and visual performance with night vision goggles [AD-A156989] p 23 N86-10787

I

IMAGE CONTRAST
Perceived contrast in the fovea and periphery -- in human retina p 19 A86-11148
IMAGING TECHNIQUES
The synthesis and analysis of color images [NASA-TM-86844] p 20 N86-10777
IMMOBILIZATION
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
INDUSTRIAL SAFETY
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations [ISBN-3-88383-107-7] p 15 N86-10773
INDUSTRIES
Biotechnology: Science and practice p 4 N86-10742
INJURIES
Controlled environment life support system: Calcium-related leaf injuries on plants [NASA-CR-176288] p 6 N86-11829
ION IMPLANTATION
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon [DE85-013986] p 18 N86-11849
IRON
Kinetics of biological ferrous iron oxidation [DE85-014616] p 4 N86-10736
IRRADIATION
Approaches to quantitative expression of dose response [DE85-013498] p 15 N86-10772

K

KNEE (ANATOMY)
A graphic anthropometric aid for seating and workplace design [AD-A156986] p 23 N86-10786

L

LACTATES
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
LATERAL CONTROL
Car driving as a supervisory control task [B8563351] p 19 N86-10776
LATITUDE
Capacity for work and hemodynamics in males residing at middle and high latitudes p 13 N86-10747

LEAVES
Controlled environment life support system: Calcium-related leaf injuries on plants
[NASA-CR-176288] p 6 N86-11829
LIFE SCIENCES
Could life have arisen in the primitive atmosphere?
p 24 A86-12004
Life sciences research on the space station: An introduction
[NASA-TM-86836] p 3 N86-10734
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738
LIMBS (ANATOMY)
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
Heat transfer mechanism in human extremities
p 14 N86-10759
LINE OF SIGHT
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
LINEARITY
Determination of symmetry and phase in human visual response functions: Theory and experiments
p 15 N86-10769
LIPID METABOLISM
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
LIQUID CRYSTALS
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838
LONG DURATION SPACE FLIGHT
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
LOW TEMPERATURE ENVIRONMENTS
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786
LOWER BODY NEGATIVE PRESSURE
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
LUMINANCE
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10776
LUMINOUS INTENSITY
Perceived contrast in the fovea and periphery --- in human retina p 19 A86-11148
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
LUNG MORPHOLOGY
Characteristics of external respiration in inhabitants of the northeastern USSR p 9 A86-10698
LYMPHOCYTES
Study of hypokinesia and acceleration effects on human chromosomes p 12 N86-10740

M

MAN ENVIRONMENT INTERACTIONS
Adaptation of man to extreme conditions of Antarctica
p 13 N86-10751
Individual typological self-regulation of cardiovascular system p 13 N86-10752
MANIPULATORS
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
MANNED SPACE FLIGHT
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
Medical requirement for manned space programme
p 11 A86-12426
MARINE TECHNOLOGY
LSRO/ONR ad hoc review process
[AD-A156590] p 4 N86-10735
MATHEMATICAL MODELS
Spatial-frequency model for hyperacuity
p 19 A86-11147
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
MEDICAL SCIENCE
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738
MEDICAL SERVICES
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
MENTAL PERFORMANCE
The effects of mild hypoxia on a logical reasoning task p 18 A86-10261
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771
METABOLISM
The effect of 24-hr sleep deprivation on the metabolism of biogenic amines p 9 A86-10700
Intradiurnal organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
MICE
Teratogenic effects of microwave radiation
[PB85-207462] p 7 N86-11837
MICROBIOLOGY
Biotechnology: Science and practice
p 4 N86-10742
MICROORGANISMS
Biotechnology: Science and practice
p 4 N86-10742
Structure and function of isozymes: Evolutionary aspects and role of oxygen in eucaryotic organisms
[NASA-CR-176286] p 6 N86-11831
MICROWAVES
Teratogenic effects of microwave radiation
[PB85-207462] p 7 N86-11837
MILITARY PSYCHOLOGY
Standardization of tasks: Approach planning --- human performance assessment
[IZF-1984-19] p 20 N86-10782
MILITARY TECHNOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738
MINERAL METABOLISM
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
MINES (EXCAVATIONS)
Kinetics of biological ferrous iron oxidation
[DE85-014616] p 4 N86-10736
MITOCHONDRIA
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
MOBILITY
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
MODELS
TEMPUS: Simulating personnel and tasks in a 3-D environment
[NASA-CR-171901] p 22 N86-10785
MOLECULAR BIOLOGY
New perspectives on bacterial ferredoxin evolution
p 2 A86-12001
LSRO/ONR ad hoc review process
[AD-A156590] p 4 N86-10735
Information from specific-locus mutants on the nature of induced and spontaneous mutations in the mouse
[DE85-014313] p 7 N86-11836
MONITORS
TV monitoring control system in electrophysiological studies p 14 N86-10765
MONOPROPELLANTS
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985
[AD-A157623] p 17 N86-11844
MORTALITY
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101
MOTION SICKNESS
Behavioral Airsickness Management program for student pilots p 18 A86-10258
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
Airsickness among Indian Airlines passengers
p 12 A86-12435
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
MOTIVATION
Adaptive motivation theory
[AD-A157440] p 21 N86-11851
MUSCLES
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
MUSCULAR FUNCTION
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12360
Changes in the vascular functions of skeletal muscles due to acute hypothermia p 3 A86-12522
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness
p 12 N86-10746
Heat transfer mechanism in human extremities
p 14 N86-10759
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
MUSCULAR STRENGTH
Testosterone and muscle hypertrophy in female rats
p 2 A86-12026
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
MUSCULOSKELETAL SYSTEM
The skeleton in space p 10 A86-11833
MUTAGENS
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737
Positive genetic hazard predictions from short-term tests have proved false for results in mammalian spermatogonia with all environmental chemicals so far tested
[DE85-013640] p 6 N86-11833
Prospects for DNA methods to measure human heritable mutation rates
[DE85-014555] p 17 N86-11847
MUTATIONS
Relationship between alkylation sites and induction of dominant lethals and heritable translocations in mice
[DE85-014309] p 7 N86-11835
Information from specific-locus mutants on the nature of induced and spontaneous mutations in the mouse
[DE85-014313] p 7 N86-11836
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
Prospects for DNA methods to measure human heritable mutation rates
[DE85-014555] p 17 N86-11847
MYOCARDIAL INFARCTION
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
MYOCARDIUM
Classification of changes in electrocardiogram during muscular exertion of healthy individuals
p 14 N86-10755

N

NASA PROGRAMS
Opening up the astronaut selection process
p 18 A86-10493
NERVOUS SYSTEM
Eye-movement activity as index of functional state of brain p 14 N86-10756
Cognitive science program: Dissociation of the central timekeeper and the peripheral implementation processes in repetitive movements
[AD-A157542] p 21 N86-11852
NEURONS
Neuronal reactions and evoked potentials in the subcortical brain structures in the process of visual recognition. I Formulation of the problem and basic methods for its solution p 9 A86-10696
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
NEUROPHYSIOLOGY
Electrocardiographic changes in serious decompression sickness p 2 A86-10254
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434
NIGHT VISION
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
NITROGEN
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013986] p 18 N86-11849
NOISE INTENSITY
A differential evaluation of the mechanism of the effect of noise on the ear in relation to noise frequency characteristics (Clinical and experimental study)
p 10 A86-11750

NOREPINEPHRINE
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
NUCLEAR EXPLOSIONS
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014695] p 17 N86-11846

O

ON-LINE PROGRAMMING
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
OPERATOR PERFORMANCE
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750
ORTHOSTATIC TOLERANCE
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257
Study of hypokinesia and acceleration effects on human chromosomes p 12 N86-10740
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
OXIDATION
Kinetics of biological ferrous iron oxidation
[DE85-014616] p 4 N86-10736
OXYGEN
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
Structure and function of isozymes: Evolutionary aspects and role of oxygen in eucaryotic organisms
[NASA-CR-176286] p 6 N86-11831
OXYGEN CONSUMPTION
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure p 5 N86-10760
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
OXYGEN METABOLISM
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
OXYHEMOGLOBIN
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103

P

PARAFFINS
Romanian plant produces protein concentrate from paraffin-nourished yeasts p 4 N86-10741
PARAMETER IDENTIFICATION
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157
PASSENGERS
Airsickness among Indian Airlines passengers p 12 A86-12435
PEPTIDES
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
Homocarnosin in rat brain during adaptation to cold p 5 N86-10762
PERCEPTUAL ERRORS
Spatial location and hyperacuity - The centre/surround localization contribution function has two substrates p 19 A86-12061
PERFORMANCE PREDICTION
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850
PERSONNEL MANAGEMENT
Psychological Sciences Division 1984 programs
[AD-A156631] p 20 N86-10779
PERSONNEL SELECTION
Opening up the astronaut selection process p 18 A86-10493
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
Medical evaluation of cosmonauts - Assessment of vestibular system p 11 A86-12429
Medical evaluation of cosmonauts - Psychological testing p 19 A86-12431
Dental evaluation of cosmonauts p 11 A86-12432
Medical evaluation of cosmonauts - Biochemical investigations p 11 A86-12433
Standardization of tasks: Approach planning — human performance assessment
[IZF-1984-19] p 20 N86-10782
PHARMACOLOGY
Mechanism of adaptogenic action of prickly eleuterococcus on man during heat stress p 14 N86-10757
PHASE SHIFT
Determination of symmetry and phase in human visual response functions: Theory and experiments p 15 N86-10769
PHOTOSYNTHESIS
Controlled environment life support system: Calcium-related leaf injuries on plants
[NASA-CR-176288] p 6 N86-11829
Structure and function of isozymes: Evolutionary aspects and role of oxygen in eucaryotic organisms
[NASA-CR-176286] p 6 N86-11831
PHYSICAL EXERCISE
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness p 12 N86-10746
Classification of changes in electrocardiogram during muscular exertion of healthy individuals p 14 N86-10755
PHYSICAL FITNESS
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428
Physiological effects of training
[AD-A157417] p 16 N86-11841
PHYSICAL WORK
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
PHYSIOLOGICAL EFFECTS
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog p 2 A86-10255
The effects of mild hypoxia on a logical reasoning task p 18 A86-10261
Characteristics of external respiration in inhabitants of the northeastern USSR p 9 A86-10698
The effect of 24-hr sleep deprivation on the metabolism of biogenic amines p 9 A86-10700
A differential evaluation of the mechanism of the effect of noise on the ear in relation to noise frequency characteristics (Clinical and experimental study) p 10 A86-11750
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
Medical evaluation of cosmonauts - 'Acceleration' p 11 A86-12430
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
Homocarnosin in rat brain during adaptation to cold p 5 N86-10762
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773
Physiological effects of training
[AD-A157417] p 16 N86-11841
PHYSIOLOGICAL RESPONSES
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
Comparative biodynamic response of two primate species to the same vibrational environment p 1 A86-10252
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
Adaptation of the human organism to the repeated short-term exposures to a hot environment p 10 A86-10701
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
Changes in the vascular functions of skeletal muscles due to acute hypothermia p 3 A86-12522
Effect of single actions of weak electromagnetic fields of ultralow frequency on indices of endocrine system p 12 N86-10744
Individual typological features of autonomic reactions during autogenic training in polar expedition members in period of wintering in Antarctica p 13 N86-10748
Individual typological self-regulation of cardio-vascular system p 13 N86-10752
TV monitoring control system in electrophysiological studies p 14 N86-10765
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice p 5 N86-10766
Variability analysis of visually induced responses in the midst of noise
[B8564052] p 16 N86-10774
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
Is the cerebellum involved in motor and perceptual timing: A case study
[AD-A157452] p 16 N86-11842
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
PHYSIOLOGICAL TESTS
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428
The wearing comfort of the PVC: Combat back pack
[IZF-1984-34] p 23 N86-10789
PHYSIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-023] p 4 N86-10738
PILOT ERROR
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[DFVLR-FB-85-21] p 20 N86-10781
PILOT PERFORMANCE
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157
Airline pilot disability - The continued experience of a major U.S. airline p 8 A86-10251
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
The impact of life events on pilots - An extension of Alkov's approach p 18 A86-10260
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
PILOT SELECTION
Airline pilot disability - The continued experience of a major U.S. airline p 8 A86-10251
PILOT TRAINING
Behavioral Airsickness Management program for student pilots p 18 A86-10258
PLANTS (BOTANY)
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
Romanian plant produces protein concentrate from paraffin-nourished yeasts p 4 N86-10741
POLAR REGIONS
Characteristics of external respiration in inhabitants of the northeastern USSR p 9 A86-10698
POLYVINYL CHLORIDE
The wearing comfort of the PVC: Combat back pack
[IZF-1984-34] p 23 N86-10789
PORTABLE LIFE SUPPORT SYSTEMS
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
POSITION (LOCATION)
Capacity for work and hemodynamics in males residing at middle and high latitudes p 13 N86-10747
POSITION ERRORS
Path error-neglection in straight lane driving
[IZF-1984-32] p 20 N86-10783

PREGNANCY
Teratogenic effects of microwave radiation
[PB85-207462] p 7 N86-11837
PRESSURE BREATHING
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure
p 5 N86-10760
PRESSURE SENSORS
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838
PRESSURE SUITS
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
PREVENTION
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773
PRIMITIVE EARTH ATMOSPHERE
Could life have arisen in the primitive atmosphere?
p 24 A86-12004
PROBLEM SOLVING
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
PROSTAGLANDINS
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes
p 8 A86-10111
PROTECTIVE CLOTHING
Thermal insulating capabilities of 'thin' clothing insulation p 22 A86-10263
PROTEIN METABOLISM
Correlation between plasma fibronectin level and experimental rat heat stress mortality p 1 A86-10101
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
PROTEIN SYNTHESIS
New perspectives on bacterial ferredoxin evolution
p 2 A86-12001
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies
p 23 A86-12003
PROTEINS
Romanian plant produces protein concentrate from paraffin-nourished yeasts p 4 N86-10741
Biotechnology: Science and practice
p 4 N86-10742
Utilization of non-conventional systems for conversion of biomass to food components: Potential for utilization of algae in engineered foods
[NASA-CR-176257] p 6 N86-11830
PROTOBIOLOGY
Could life have arisen in the primitive atmosphere?
p 24 A86-12004
PSYCHOACOUSTICS
A differential evaluation of the mechanism of the effect of noise on the ear in relation to noise frequency characteristics (Clinical and experimental study)
p 10 A86-11750
PSYCHOLOGICAL EFFECTS
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773
PSYCHOLOGICAL FACTORS
Behavioral Airsickness Management program for student pilots p 18 A86-10258
The impact of life events on pilots - An extension of Alkov's approach p 18 A86-10260
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
PSYCHOLOGICAL TESTS
Medical evaluation of cosmonauts - Psychological testing p 19 A86-12431
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[DFVLR-FB-85-21] p 20 N86-10781
Standardization of tasks: Approach planning --- human performance assessment
[IZF-1984-19] p 20 N86-10782
PSYCHOLOGY
Psychological Sciences Division 1984 programs
[AD-A156631] p 20 N86-10779
Adaptive motivation theory
[AD-A157440] p 21 N86-11851
PSYCHOMOTOR PERFORMANCE
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
Cognitive science program: Dissociation of the central timekeeper and the peripheral implementation processes in repetitive movements
[AD-A157542] p 21 N86-11852
PUBLIC HEALTH
Biotechnology regulation
[GPO-43-778] p 3 N86-10733
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839
PULMONARY CIRCULATION
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog
p 2 A86-10255
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
PULMONARY FUNCTIONS
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848
PULSE RATE
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
PYRUVATES
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110

R

RADIATION
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853
RADIATION CHEMISTRY
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies
p 23 A86-12003
RADIATION DOSAGE
Effect of single actions of weak electromagnetic fields of ultralow frequency on indices of endocrine system
p 12 N86-10744
Approaches to quantitative expression of dose response
[DE85-013498] p 15 N86-10772
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
RADIATION EFFECTS
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
Psychological aspects of personnel contamination
[DE85-012955] p 21 N86-11853
RADIATION HAZARDS
Approaches to quantitative expression of dose response
[DE85-013498] p 15 N86-10772
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014695] p 17 N86-11846
RADIOLYSIS
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies
p 23 A86-12003
RATS
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
REACTION KINETICS
Kinetics of biological ferrous iron oxidation
[DE85-014616] p 4 N86-10736
REACTION TIME
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
RECOGNITION
Neuronal reactions and evoked potentials in the subcortical brain structures in the process of visual recognition. I Formulation of the problem and basic methods for its solution p 9 A86-10696
Prestimulus EEG and evoked potentials in man during the recognition of a meaningful light stimulus
p 9 A86-10697
REFLECTANCE
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10778
REGULATIONS
Biotechnology regulation
[GPO-43-778] p 3 N86-10733
REMOTE CONTROL
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
REMOTE SENSING
Life sciences research on the space station: An introduction
[NASA-TM-86836] p 3 N86-10734
RENAL FUNCTION
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
RESEARCH
Psychological Sciences Division 1984 programs
[AD-A156631] p 20 N86-10779
RESEARCH MANAGEMENT
LSRO/ONR ad hoc review process
[AD-A156590] p 4 N86-10735
RESPIRATION
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848
RESPIRATORS
Conditioning potentialities of respiratory apparatus
p 14 N86-10753
RESPIRATORY DISEASES
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985
[AD-A157623] p 17 N86-11844
RESPIRATORY PHYSIOLOGY
Role of hemoglobin P50 in O2 transport during normoxic and hypoxic exercise in the dog p 1 A86-10103
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
Characteristics of external respiration in inhabitants of the northeastern USSR p 9 A86-10698
Indicators of external respiration in young athletes during adaptation to high environmental temperature
p 9 A86-10699
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382
RESPIRATORY RATE
Dynamics of general resistance of rats during readaptation period after training in altered gas environment p 6 N86-10767
RESPIRATORY SYSTEM
Classification of changes in electrocardiogram during muscular exertion of healthy individuals
p 14 N86-10755
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure
p 5 N86-10760
RETINAL IMAGES
Perceived contrast in the fovea and periphery --- in human retina p 19 A86-11148
RIBONUCLEIC ACIDS
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
ROLL
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784

S

SACCADIC EYE MOVEMENTS
Eye-movement activity as index of functional state of brain p 14 N86-10756
SALYUT SPACE STATION
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362
SCANNING
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850
SEA LEVEL
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
SEATS
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

SENSORIMOTOR PERFORMANCE
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750
SENSORY PERCEPTION
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 18 N86-11840
SEROTONIN
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice p 5 N86-10766
SERUMS
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
SERVOMECHANISMS
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
SEX FACTOR
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
SHAPES
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10778
SIGNAL DETECTION
Spatial-frequency model for hyperacuity p 19 A86-11147
SIGNAL TO NOISE RATIOS
Variability analysis of visually induced responses in the midst of noise
[B8584052] p 16 N86-10774
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838
SITTING POSITION
Vibration transmissibility in seated subjects p 22 A86-12436
SKIN FRICTION
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176294] p 16 N86-11838
SKIN TEMPERATURE (BIOLOGY)
Heat transfer mechanism in human extremities p 14 N86-10759
SLEEP
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
SLEEP DEPRIVATION
The effect of 24-hr sleep deprivation on the metabolism of biogenic amines p 9 A86-10700
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771
SODIUM
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
SPACE ADAPTATION SYNDROME
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
Medical evaluation of cosmonauts - Assessment of vestibular system p 11 A86-12429
SPACE FLIGHT STRESS
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
Medical requirement for manned space programme p 11 A86-12426
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428
Medical evaluation of cosmonauts - 'Acceleration' p 11 A86-12430
Medical evaluation of cosmonauts - Biochemical investigations p 11 A86-12433
SPACE PERCEPTION
Perceived contrast in the fovea and periphery --- in human retina p 19 A86-11148
Spatial location and hyperacuity - The centre/surround localization contribution function has two substrates p 19 A86-12061
SPACE PSYCHOLOGY
Medical evaluation of cosmonauts - Psychological testing p 19 A86-12431
SPACE STATIONS
Life sciences research on the space station: An introduction
[NASA-TM-86836] p 3 N86-10734
SPACEBORNE PHOTOGRAPHY
Teleoperator human factors study
[NASA-CR-176310] p 23 N86-11854
SPATIAL DISTRIBUTION
Spatial-frequency model for hyperacuity p 19 A86-11147
SPERMATOZOA
Detection of chromosomal abnormalities in human sperm
[DE85-014178] p 7 N86-11834
STANDARDIZATION
Standardization of tasks: Approach planning --- human performance assessment
[IZF-1984-19] p 20 N86-10782
STEERING
Path error-neglection in straight lane driving
[IZF-1984-32] p 20 N86-10783
STEROIDS
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
Testosterone and muscle hypertrophy in female rats p 2 A86-12026
STRESS (PHYSIOLOGY)
Classification of changes in electrocardiogram during muscular exertion of healthy individuals p 14 N86-10755
Mechanism of adaptogenic action of prickly eleuterococcus on man during heat stress p 14 N86-10757
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
STRESS (PSYCHOLOGY)
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
Eye-movement activity as index of functional state of brain p 14 N86-10756
STRESSES
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 18 N86-11840
SYMMETRY
Determination of symmetry and phase in human visual response functions: Theory and experiments p 15 N86-10769
SYNCOPE
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434
SYNTHETIC FIBERS
Thermal insulating capabilities of 'thin' clothing insulation p 22 A86-10263
SYNTHETIC FOOD
Utilization of non-conventional systems for conversion of biomass to food components: Potential for utilization of algae in engineered foods
[NASA-CR-176257] p 6 N86-11830

T

TARGET ACQUISITION
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157
TASK COMPLEXITY
The effects of mild hypoxia on a logical reasoning task p 18 A86-10261
TASKS
Standardization of tasks: Approach planning --- human performance assessment
[IZF-1984-19] p 20 N86-10782
TELEOPERATORS
Teleoperator human factors study
[NASA-CR-176310] p 23 N86-11854
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
TEMPERATURE DEPENDENCE
Conditioning potentialities of respiratory apparatus p 14 N86-10753
TEMPERATURE EFFECTS
Short term heat effect on adreno- and cholino-sensitivity of rat's small intestine p 4 N86-10754
Efficiency of muscular work in white rats during adaptation to cold p 5 N86-10763
THALAMUS
Neuronal reactions and evoked potentials in the subcortical brain structures in the process of visual recognition. I Formulation of the problem and basic methods for its solution p 9 A86-10696
THERMAL ENVIRONMENTS
Indicators of external respiration in young athletes during adaptation to high environmental temperature p 9 A86-10699
Adaptation of the human organism to the repeated short-term exposures to a hot environment p 10 A86-10701
THERMAL INSULATION
Thermal insulating capabilities of 'thin' clothing insulation p 22 A86-10263
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786
THERMOGRAPHY
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
THERMOPHILES
Life at high temperatures p 2 A86-11802
THERMOREGULATION
Hierarchy of control models for temperature regulation p 22 A86-10158
Mechanism of adaptogenic action of prickly eleuterococcus on man during heat stress p 14 N86-10757
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
Heat transfer mechanism in human extremities p 14 N86-10759
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
THRESHOLDS (PERCEPTION)
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
Determination of symmetry and phase in human visual response functions: Theory and experiments p 15 N86-10769
THROMBOCYTES
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745
THYROID GLAND
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014695] p 17 N86-11845
TIME MEASUREMENT
Is the cerebellum involved in motor and perceptual timing: A case study
[AD-A157452] p 16 N86-11842
TITANIUM ALLOYS
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013986] p 18 N86-11849
TOBACCO
Acute pulmonary effects of formaldehyde exposure in humans
[DE85-014728] p 17 N86-11848
TOLERANCES (PHYSIOLOGY)
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985
[AD-A157623] p 17 N86-11844
TOXICOLOGY
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839
TRAINING DEVICES
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784
TRAINING SIMULATORS
The influence of tactual seat-motion cues on training and performance in a roll-axis compensatory tracking task setting p 22 N86-10784
TRANSPORT PROPERTIES
Indices of blood oxygen transporting properties and erythropoiesis in rats after prolonged stay in nitrogen-oxygen mixture at elevated pressure p 5 N86-10761
TRYPTOPHAN
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice p 5 N86-10766
TUMORS
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262

U

ULTRAVIOLET RADIATION
Somatic cell and molecular genetics approach to DNA repair and mutagenesis
[DE85-014181] p 4 N86-10737

UNCONSCIOUSNESS
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434
UNDERWATER PHYSIOLOGY
Electrocardiographic changes in serious decompression sickness p 2 A86-10254

V

VARIABILITY
Variability analysis of visually induced responses in the midst of noise
[B8564052] p 16 N86-10774
VASOCONSTRICTION
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
VASOCONSTRICTOR DRUGS
Effects of 100 percent oxygen on the cardiovascular responses to vasoactive compounds in the dog p 2 A86-10255
VASODILATION
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
VESTIBULAR TESTS
Medical evaluation of cosmonauts - Assessment of vestibular system p 11 A86-12429
Vestibular resistance and blood circulation changes in orthostatic position during hyperthermia p 14 N86-10758
VIBRATION EFFECTS
Comparative biodynamic response of two primate species to the same vibrational environment p 1 A86-10252
Vibration transmissibility in seated subjects p 22 A86-12436
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773
VIBRATION PERCEPTION
Vibration transmissibility in seated subjects p 22 A86-12436
VISCERA
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
VISION
Vision test chart and method using Gaussians
[AD-D011756] p 20 N86-10778
VISUAL ACUITY
Spatial-frequency model for hyperacuity p 19 A86-11147
Spatial location and hyperacuity - The centre/surround localization contribution function has two substrates p 19 A86-12061
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
VISUAL DISCRIMINATION
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[DFVLR-FB-85-21] p 20 N86-10781
VISUAL PERCEPTION
Neuronal reactions and evoked potentials in the subcortical brain structures in the process of visual recognition. I Formulation of the problem and basic methods for its solution p 9 A86-10696
Prestimulus EEG and evoked potentials in man during the recognition of a meaningful light stimulus p 9 A86-10697
Determination of symmetry and phase in human visual response functions: Theory and experiments p 15 N86-10769
The synthesis and analysis of color images
[NASA-TM-86844] p 20 N86-10777
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787
VISUAL STIMULI
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
Prestimulus EEG and evoked potentials in man during the recognition of a meaningful light stimulus p 9 A86-10697
Spatial location and hyperacuity - The centre/surround localization contribution function has two substrates p 19 A86-12061
Variability analysis of visually induced responses in the midst of noise
[B8564052] p 16 N86-10774
VISUAL TASKS
Human pilot parameter identification for a simulated air-to-ground target acquisition task p 18 A86-10157
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11860
VITAMINS
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750

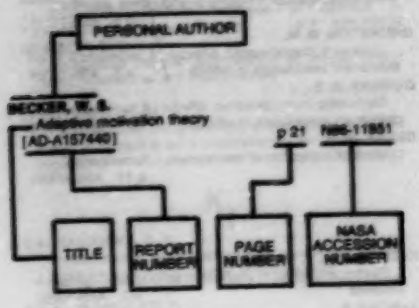
W

WAKEFULNESS
Intradiurnial organization of wakefulness-sleep sequence and energy metabolism in rats exposed to low ambient temperature p 5 N86-10764
WATER BALANCE
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257
Water excretion and natriuretic function in the kidneys of rats adapted to cold p 3 A86-12520
WEAR
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013986] p 18 N86-11849
WORK
Adaptive motivation theory
[AD-A157440] p 21 N86-11851
WORK CAPACITY
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
Adaptation of man to extreme conditions of Antarctica p 13 N86-10751
WORKLOADS (PSYCHOPHYSIOLOGY)
Capacity for work and hemodynamics in males residing at middle and high latitudes p 13 N86-10747
Effect of inclusion of supplementary ascorbic acid in daily diet on degree of vitamin saturation of body and thermoresistance of erythrocytes while working in arid zone p 13 N86-10749
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773

Y

YEAST
Romanian plant produces protein concentrate from paraffin-nourished yeasts p 4 N86-10741

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ADAVAL, S. K.
Medical evaluation of cosmonauts - Biochemical investigations p 11 A86-12433

AGARKOV, F. T.
Conditioning potentialities of respiratory apparatus p 14 N86-10753

AKSENOV, V. V.
Assessment of state of chronotropic and inotropic heart function at different degrees of physical fitness p 12 N86-10746

ALURKAR, V. M.
Medical evaluation of cosmonauts - Cardiovascular assessment p 11 A86-12428

ANDERSON, K. W.
A graphic anthropometric aid for seating and workplace design
[AD-A156998] p 23 N86-10788

ANDREWS, T. K., JR.
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845

ARKHANGELSKIY, D. Y.
Hemodynamics during gravitational overloads (mathematical modeling) p 12 N86-10739

ASHWORTH, A. K.
Detection of chromosomal abnormalities in human sperm
[DE85-014178] p 7 N86-11834

B

BADCOCK, D. R.
Spatial location and hyperacuity - The centre/surround localization contribution function has two subtrates p 19 A86-12061

BADLER, N. I.
Strength modeling report
[NASA-CR-171896] p 15 N86-10770
TEMPUS: Simulating personnel and tasks in a 3-D environment
[NASA-CR-171901] p 22 N86-10785

BAKHAREV, V. D.
Adaptation of the human organism to the repeated short-term exposures to a hot environment p 10 A86-10701

BALANDIN, V. S.
Adaptation of the human organism to the repeated short-term exposures to a hot environment p 10 A86-10701

BALUDA, M. V.
Effect of emotional stress on hemostasis system of healthy persons p 19 N86-10745

BANERJEE, K. R.
EEG studies in episodic unconsciousness, seizure disorder and syncope p 12 A86-12434

BANERJEE, P. K.
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427

BARER, A. S.
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362

BARKER, W. C.
New perspectives on bacterial ferredoxin evolution p 2 A86-12001

BARTELS, H.
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256

BEAVER, W. L.
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110

BECKER, W. S.
Adaptive motivation theory
[AD-A157440] p 21 N86-11851

BELOVA, T. I.
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521

BIANCHI, A. L.
Responses of bulbospinal and laryngeal respiratory neurons to hypercapnia and hypoxia p 3 A86-12381
Changes in antidromic latencies of medullary respiratory neurons in hypercapnia and hypoxia p 3 A86-12382

BIDLINGMAIER, F.
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259

BILLMAN, G. E.
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107

BLAAUW, G. J.
Car driving as a supervisory control task
[B8563351] p 19 N86-10776

BOBKOVA, N. N.
Study of hypokinesia and acceleration effects on human chromosomes p 12 N86-10740

BODROV, V. A.
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750

BOER, L. C.
Standardization of tasks: Approach planning
[IZF-1984-19] p 20 N86-10782

BOLSHSKOVA, T. D.
The effect of 24-hr sleep deprivation on the metabolism of biogenic amines p 9 A86-10700

BONDARENKO, T. I.
Homocarnosin in rat brain during adaptation to cold p 5 N86-10762

BORTNOVSKIY, V. N.
Effect of various doses of some vitamins on non-specific mechanisms of adaptation of man p 13 N86-10750

BOTHE, D. J.
Thermal insulating capabilities of 'thin' clothing insulation p 22 A86-10263

BRADFORD, K. Z.
Teleoperator human factors study
[NASA-CR-176310] p 23 N86-11854

BRANDRIFF, B.
Detection of chromosomal abnormalities in human sperm
[DE85-014178] p 7 N86-11834

BRIMMER, C. J.
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109

BROCK, T. D.
Life at high temperatures p 2 A86-11802

BRZEZINSKA, Z.
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104

BUCH, Y. I.
TV monitoring control system in electrophysiological studies p 14 N86-10765

BUCHANAN, R. A.
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013988] p 18 N86-11849

BUDKO, K. P.
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695

BUNGO, M. W.
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257

C

CANNON, M. W., JR.
Perceived contrast in the fovea and periphery p 19 A86-11148

CARLSON, C. R.
Spatial-frequency model for hyperacuity p 19 A86-11147

CARRANO, A. V.
Detection of chromosomal abnormalities in human sperm
[DE85-014178] p 7 N86-11834

CARTER, E. T.
Airline pilot disability - The continued experience of a major U.S. airline p 8 A86-10251

CATTROLL, S. W.
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786

CHARLES, J. B.
Cardiovascular deconditioning during space flight and the use of saline as a countermeasure to orthostatic intolerance p 8 A86-10257

CHATTERJEE, P. C.
Medical requirement for manned space programme p 11 A86-12426

COATES, G. D.
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850

COHN, J. N.
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377

COLLINS, W. E.
The effects of age, sleep deprivation, and altitude on complex performance
[AD-A156987] p 15 N86-10771

COMSTOCK, J. R., JR.
Visual information transfer. Part 1: Assessment of specific information needs. Part 2: Parameters of appropriate instrument scanning behavior
[NASA-CR-176277] p 21 N86-11850

CONRAD, R. A.
Thyroid absorbed dose for people at Rongelap, Utirik and Sifo on March 1, 1954
[DE85-014895] p 17 N86-11846

COOPER, C. L.
The impact of life events on pilots - An extension of Alkov's approach p 18 A86-10260

COTE, J.
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106

D

DANIELS, W. L.
Physiological effects of training
[AD-A157417] p 16 N86-11841

DAVIS, J. A.
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
DELIHAS, N.
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
DESHMUKH, S. P.
Medical evaluation of cosmonauts - Assessment of vestibular system p 11 A86-12429
DIKSHIT, M. B.
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427
DOBRAKOVOVA, M.
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
DOERR, H. G.
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
DONINA, Z. A.
Reaction of rabbit respiration system to hypoxic stimulus in nitrogen-oxygen medium at elevated pressure p 5 N86-10760
DRAGANIC, Z. D.
Radiation chemistry of an aqueous solution of glycine Compounds of interest to chemical evolution studies p 23 A86-12003
DROLET, L. L.
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840
DRUMM, D. M.
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788
DUBOSE, D. A.
Correlation between plasma fibronectin level and experimental rate heat stress mortality p 1 A86-10101
DUPUIS, H.
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88383-107-7] p 15 N86-10773

E

EGOROV, A. D.
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363

F

FAGAN, J. M.
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
FAGARD, R.
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
FEDORUK, A. G.
A study of functional asymmetry of paired organs in aircraft personnel p 10 A86-10750
FELDMAN, M. J.
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
FIGUROVA, M. Y.
Effect of cold on brain serotonin system and plasma corticosteroid level in different strains of mice p 5 N86-10766
FISHER, D. R.
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845
FITTS, R. H.
Recovery in skeletal muscle contractile function after prolonged hindlimb immobilization p 1 A86-10109
FLEG, J. L.
Age-related augmentation of plasma catecholamines during dynamic exercise in healthy males p 10 A86-12376
FOX, G. E.
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
FRANCESCONI, R. P.
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
FRANCIS, G. S.
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
FRAZIER, J. W.
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
FRAZIER, M. E.
Dose distribution and the relative biological effectiveness of internal alpha emitters
[DE85-013041] p 17 N86-11845

G

GAGNOL, J. P.
Cardiac response of submaximal exercise in dogs susceptible to sudden cardiac death p 1 A86-10107
GAILLARD, A. W. K.
Standardization of tasks: Approach planning
[IZF-1984-19] p 20 N86-10782
GAZENKO, O. G.
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
GENEROSO, W. M.
Relationship between alkylation sites and induction of dominant lethals and heritable translocations in mice
[DE85-014309] p 7 N86-11835
GEORGE, D. G.
New perspectives on bacterial ferredoxin evolution p 2 A86-12001
GIBSON, J.
Phylogenetic origins of the plant mitochondrion based on a comparative analysis of 5S ribosomal RNA sequences p 2 A86-12002
GILBERT, E. S.
Approaches to quantitative expression of dose response
[DE85-013498] p 15 N86-10772
GILES, D. A.
Behavioral Airsickness Management program for student pilots p 18 A86-10258
GOOTHELP, H.
Studies on human vehicle control
[B8563352] p 19 N86-10775
GOOTHELP, J.
Path error-neglection in straight lane driving
[IZF-1984-32] p 20 N86-10783
GOETERS, K. M.
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[DFVLR-FB-85-21] p 20 N86-10781
GOLDSMITH, S. R.
Effect of head-down tilt on basal plasma norepinephrine and renin activity in humans p 11 A86-12377
GOODE, A. W.
The skeleton in space p 10 A86-11833
GOODYEAR, C. D.
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
GORBACH, A. M.
Thermovisual indicators of brain reactions to visual stimuli p 9 A86-10695
GORDON, L.
Detection of chromosomal abnormalities in human sperm
[DE85-014178] p 7 N86-11834
GOURLET, V.
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256
GRAFOVA, V. A.
Effect of inclusion of supplementary ascorbic acid in daily diet on degree of vitamin saturation of body and thermoresistance of erythrocytes while working in arid zone p 13 N86-10749
GRAUWELS, R.
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
GREEN, R. G.
The effects of mild hypoxia on a logical reasoning task p 18 A86-10261
GREENE, E. R.
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102
GREENE, J. G.
Control of exercise hyperpnea during hypercapnia in humans p 7 A86-10105
GREENLEAF, J. E.
Exercise hyperthermia as a factor limiting physical performance - Temperature effect on muscle metabolism p 1 A86-10104
GRIGOREV, A. I.
Preliminary medical results of the 5-month flight onboard Salyut-7-Soyuz-T
[IAF PAPER 84-184] p 10 A86-12362
Periodisation and classification of adaptive reactions of man in prolonged space flights
[IAF PAPER 84-185] p 10 A86-12363
GROESENEKEN, D.
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes p 8 A86-10111
GRUNSTEIN, M. M.
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
GUMBAY, R. S.
Opposing hemodynamic effects of substance P on pulmonary vasculature in rabbits p 3 A86-12378
GUPTA, M. N.
Medical evaluation of cosmonauts - 'Acceleration' p 11 A86-12430

H

HALLENBECK, J. M.
Electrocardiographic changes in serious decompression sickness p 2 A86-10254
HANNAH, K.
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
HARFORD, F. J., JR.
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
HARRISON, G.
Headache at high altitude is not related to internal carotid arterial blood velocity p 8 A86-10108
HATTON, P. D.
Calcified hematoma of the greater omentum in an F-15 fighter pilot p 9 A86-10262
HEBER, D.
Lactate, pyruvate, and lactate-to-pyruvate ratio during exercise and recovery p 8 A86-10110
HENDY, K. C.
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788
HERNDON, J. N.
Mechanical accessories for mobile teleoperators
[DE85-014310] p 23 N86-11855
HOLT, G. W.
Airline pilot disability - The continued experience of a major U.S. airline p 8 A86-10251
HOUGHTON, J. O.
Performance and physiological effects of acceleration-induced (+Gz) loss of consciousness p 8 A86-10253
HOWELL, L. L.
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
HUBBARD, R. W.
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
HUNT, L. T.
New perspectives on bacterial ferredoxin evolution p 2 A86-12001

I

IGREVSKIY, A. V.
Dynamics of changes of statistical indicators of heart rhythm of persons with different degree of motion sickness p 12 N86-10743
ILYALETDINOV, A.
Biotechnology: Science and practice p 4 N86-10742
IVANOVA, T. M.
Catecholamine content of single brain nuclei in August rats following immobilization stress p 3 A86-12521
IVRY, R. B.
Force and timing components of the motor program
[AD-A157584] p 17 N86-11843
Cognitive science program: Dissociation of the central timekeeper and the peripheral implementation processes in repetitive movements
[AD-A157542] p 21 N86-11852
IYER, E. M.
Medical evaluation of cosmonauts - Physiological stress testing p 11 A86-12427

J

JASPERS, S. R.
Biochemical response to chronic shortening in unloaded soleus muscles p 3 A86-12380
JENNINGS, T. J.
Hemodynamic effects of anti-G suit inflation in a 1-G environment p 22 A86-12379
JOBIN, M.
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
JOHNSON, E. C.
Noninvasive Doppler determination of cardiac output during submaximal and peak exercise p 21 A86-10102

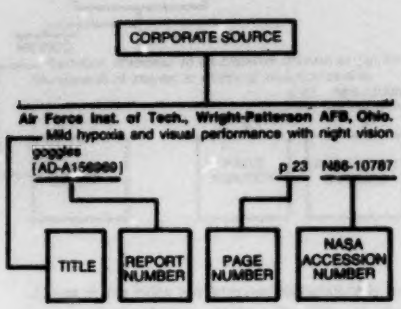
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Aeronautical Research Labs., Melbourne (Australia).
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
Mild hypoxia and visual performance with night vision goggles
[AD-A156969] p 23 N86-10787

Alabama Univ., Birmingham.
Improvement in wear performance of surgical Ti-6Al-4V alloy by ion implantation of nitrogen or carbon
[DE85-013986] p 18 N86-11849

American Inst. of Biological Sciences, Arlington, Va.
Assessments and viewpoints on the biological and human health effects of Extremely Low Frequency (ELF) electromagnetic fields: Compilation of commissioned papers for the ELF literature review project
[AD-A156942] p 16 N86-11839

Amsterdam Univ. (Netherlands).
Variability analysis of visually induced responses in the midst of noise
[B8564052] p 16 N86-10774

Army Environmental Hygiene Agency, Aberdeen Proving Ground, Md.
Health hazard evaluation of liquid monopropellants. Phase 4. Subchronic inhalation of hydroxylammonium nitrate, January 1985
[AD-A157623] p 17 N86-11844

Army Research Inst. of Environmental Medicine, Natick, Mass.
An atropinized heat-stressed rat model: Anticholinergic and anticholinesterase drug potency
[AD-A157620] p 6 N86-11832
Perceptual and physiological responses during exercise in cool and cold water
[AD-A157334] p 16 N86-11840

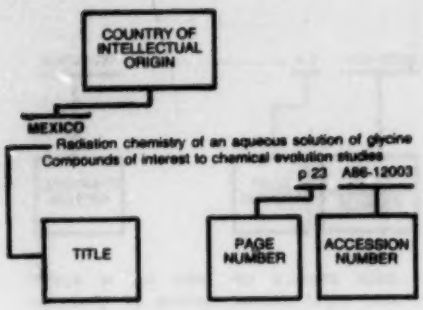
Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRALIA
A graphic anthropometric aid for seating and workplace design
[AD-A156988] p 23 N86-10788

B

BELGIUM
Plasma levels of renin, angiotensin II, and 6-ketoprostaglandin F1-alpha in endurance athletes
p 8 A86-10111

C

CANADA
Enhanced metabolic response to caffeine in exercise-trained human subjects p 7 A86-10106
Effect of increased body clothing insulation on hand temperature in a cold environment
[AD-A156597] p 22 N86-10786

G

GERMANY,FEDERAL REPUBLIC OF
Hierarchy of control models for temperature regulation
p 22 A86-10158
Biological parameters in Japanese quail genetically selected for resistance or sensitivity to an acute hypoxic survival p 2 A86-10256
Serum levels of eleven steroid hormones following motion sickness p 8 A86-10259
Could life have arisen in the primitive atmosphere?
p 24 A86-12004
Report on the research activities on whole-body vibrations. Human strain due to mechanical vibrations
[ISBN-3-88363-107-7] p 15 N86-10773
Extended analysis of the structure of error scores in psychological aptitude tests
[DFVLR-FB-85-20] p 20 N86-10780
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component

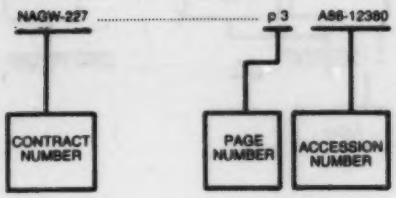
Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

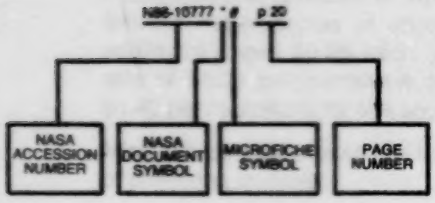
REPORT

Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page vii.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. Over 1,300 other depositories also exists. A list of the regional GPO libraries appears on the inside back cover.

UTILIZATION OF NON-CONVENTIONAL SYSTEMS FOR CONVERSION OF BIOMASS TO FOOD COMPONENTS: POTENTIAL FOR UTILIZATION OF ALGAE IN ENGINEERED FOODS Annual Report

M. KAREL, A. R. KAMAREI, and Z. NAKHOST Mar. 1985 37 p refs

(Contract NCC2-231)

(NASA-CR-176257; NAS 1.26:176257) Avail: NTIS HC A03/MF A01 CSCL 06C

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

NEW PERSPECTIVES ON BACTERIAL FERREDOXIN EVOLUTION

D. G. GEORGE, L. T. HUNT, L.-S. L. YEH, and W. C. BARKER (National Biomedical Research Foundation, Washington, DC)

Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 20-31. refs

(Contract NASW-3954; NIH-GM-08710; NIH-RR-01821)

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I – XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $8.00 domestic; $16.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 154 reports, articles and other documents announced during February 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 25
Includes genetics.

Category 52 Aerospace Medicine 31
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 40
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 43
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 47
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1

Includes genetics.

A86-13457
A HANDBOOK OF RADIATION DOSIMETRY AND HYGIENE [SPRAVOCHNIK PO DOZIMETRII I RADIATSIONNOI GIGIENE]
A. A. MOISEEV and V. I. IVANOV Moscow, Energoatomizdat, 1984, 296 p. In Russian. refs

Statistical techniques for estimating the effects of ionizing radiation on human populations are described. Consideration is given to both natural and anthropogenic sources of radioactivity, including: the cosmic ray background radioactive isotopes; radiological examinations; and fallout. Specific dose effects are estimated for the different organic structures in the body including brain and liver cells; bone marrow; the endocrine system; and the liver. The statistical distribution of radiation hazards in different regions of the earth and in different occupations is described in detail. I.H.

A86-13460
THE ENVIRONMENT AND THE HEART [VNESHNAIA SREDA I SERDTSE]
A. K. KADYRALIEV and A. IU. TILIS Frunze, Izdatel'stvo Kyrgyzstan, 1984, 112 p. In Russian.

The effect of high-altitude (HA) hypoxia on pathophysiological changes in the cardiovascular system (CVS), and the mechanisms of CVS adaptation to HA in animals with experimental mitral valve defect (MVD) were studied. The MVD was initiated by reception of 13-18 pct valve area in dogs either at 760 m above sea level or at 3200 m (adapted or nonadapted animals), and various functional parameters, such as the heart rate, intracardiac and central blood pressure (BP), blood volumes, were measured before, during and in the periods following 60-day adaptation to HA, as well as upon return to 760 m. In addition, microstructural changes in the myocardium were studied by means of electron microscopy. Exposure to HA of dogs with MVD led to a high degree of lethal decompensation. The increase of BP during hyperfunction caused the destruction of intracellular membranes and vacuolation of mitochondria in the cardiomyocytes. Administration of strophanthin decreased the effects of HA hypoxia and lethality in all groups of dogs with MVD. I.S.

A86-13648
EXTREMELY THERMOPHILIC BACTERIA LIVING AT TEMPERATURES ABOVE 100 C [EKSTREMAL'NO-TERMOFIL'NYE BAKTERII, ZHIVUSHCHIE PRI TEMPERATURE VYSHE 100 DEG]
L. G. LOGINOVA (AN SSSR, Institut Mikrobiologii, Moscow, USSR) Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia (ISSN 0002-3329), Sept.-Oct. 1985, p. 700-714. In Russian. refs

Characteristics of extremely thermophilic bacteria grown under laboratory conditions of high temperature and high pressure (necessary to suppress boiling) are presented. All such bacteria belong to the group of Archaebacteria and are anaerobes, living in nature in hot springs or near the undersea volcanoes at elevated pressure at which the solubility of oxygen is very low. Many species of thermophilic bacteria isolated by Zillig and Stetter, et al. (e.g., 1983) from hot springs of volcanic origin in Iceland are described in detail including their micrographs. The potential use of extremely thermophilic bacteria in metallurgy (e.g., for leaching out metals and desulfurization of carbon), the chemical industry (e.g., in the production of ethanol from cellulose, and methane from carbon dioxide), as well as in other fields and in research, are discussed. I.S.

A86-14117
HABITABILITY OF THE EARLY EARTH - CLUES FROM THE PHYSIOLOGY OF NITROGEN FIXATION AND PHOTOSYNTHESIS
K. M. TOWE (Smithsonian Institution, Dept. of Paleobiology, Washington, DC) Origins of Life (ISSN 0302-1688), vol. 15, no. 4, 1985, p. 235-250. refs

The study of nitrogen fixation and photosynthesis in order to determine the habitability of the Archean environment is discussed. The effects of ammonia and oxygen on the nitrogenase enzymes used in nitrogen fixation are described. An ammonia concentration of greater than 0.0001 M inhibited enzyme activity and an oxygen concentration above 16-0.1 micron-M caused destruction of the enzymes in the Archean environment. With the development of oxygenic photosynthesis the process of nitrogen fixation was affected; three evolutionary approaches which explain how an organism could have survived are presented. The utilization of carbon dioxide and sulfides in the photosynthesis processes is studied. The effect of oxygen on photosynthesis is analyzed and the importance of superoxide dismutases and RuBP oxgenase is discussed. It is concluded that with a carbon concentration of 100 PAL, sulfides at 0.0004M, and oxygen greater than 21 percent photosynthesis was possible in the Archean environment. I.F.

A86-14119
CARBON ISOTOPE DISCREPANCY BETWEEN PRECAMBRIAN STROMATOLITES AND THEIR MODERN ANALOGS - INFERENCES FROM HYPERSALINE MICROBIAL MATS OF THE SINAI COAST
M. SCHIDLOWSKI (Max-Planck-Institut fuer Chemie, Mainz, West Germany) Origins of Life (ISSN 0302-1688), vol. 15, no. 4, 1985, p. 263-277. DFG-supported research. refs

An isotope survey of hypersaline cyanobacterial mats from the Sinai Peninsula is used to analyze the high delta C-13 values found in ancient stromatolites. The carbon fixation of benthic microbial communities via the C3 pathway and the fractionation of the ribulose biphosphate carboxylase reaction are described. Fractionations result from limitations of a diffusion-controlled assimilatory pathway in which the isotope effect of the enzymatic reaction is suppressed. The influence of the protective slim coatings and reduced CO2 solubilities on the transport of CO2 is discussed. It is proposed that increased ratios of CO2 in Precambrian atmosphere contributed to the elimination of the diffusion barrier in the carbon-fixing pathways, thereby resulting in the increased delta C-13 concentrations found in ancient mat-forming microbiota. I.F.

A86-14124* Jet Propulsion Lab., California Inst. of Tech., Pasadena.
THE MICROBIAL COMMUNITY AT LAGUNA FIGUEROA, BAJA CALIFORNIA MEXICO - FROM MILES TO MICRONS
J. F. STOLZ (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; Boston University, MA) Origins of Life (ISSN 0302-1688), vol. 15, no. 4, 1985, p. 347-352. refs

The changes in the composition of the stratified microbial community in the sediments at Laguna Figeroa following floods are studied. The laguna which is located on the Pacific coast of the Baja California peninsula 200 km south of the Mexican-U.S. border is comprised of an evaporite flat and a salt marsh. Data collected from 1979-1983 using Landsat imagery, Skylab photographs, and light and transmission electron microscopy are presented. The flood conditions, which included 1-3 m of meteoric water covering the area and a remanent of 5-10 cm of siliciclastic and clay sediment, are described. The composition of the community prior to the flooding consisted of Microcoleus, Phormidium sp., a coccoid cynanobacteria, Phloroflexus, Ectothiorhodospira, Chloroflexus, Thiocapsa sp., and Chromatium. Following the floods Thiocapsa, Chromatium, Oscillatora sp., Spirulina sp., and Microcoleus are observed in the sediments.

EFFECTS OF SUSPENSION HYPOKINESIA/HYPODYNAMIA ON RAT SKELETAL MUSCLE
S. R. MAX (Maryland, University, Baltimore) and D. E. FLYNN Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1065-1069. Research supported by the University of Maryland. refs
(Contract NAG2-100)

The effects of suspension hypokinesia/hypodynamia (H/H) on properties of soleus and plantaris muscles of rats were studied. The objective was to compare the effects of this model to those of disuse atrophy. After 12 d of H/H, there were significant decreases in soleus and plantaris muscle wet weight and citrate synthase activity. Soleus muscle was affected to a greater extent than plantaris muscle. There was a significant decrease in noncollagen protein content of H/H soleus muscle. Triceps brachii muscles did not display significant changes in any parameters measured, suggesting that observed changes were not due to systemic factors. There was no significant change in the water content of H/H soleus or plantaris muscles. Suspension H/H causes muscle changes different from those secondary to limb immobilization, in which soleus and plantaris muscles are equally affected.

EFFECTS OF HEAD AND BODY RESTRAINT ON EXPERIMENTAL MOTION-INDUCED SICKNESS IN SQUIRREL MONKEYS
C. R. WILPIZESKI, L. D. LOWRY, R. B. CONTRUCCI, S. J. GREEN, and W. S. GOLDMAN (Thomas Jefferson University, Philadelphia, PA) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1070-1073. Research supported by the Ben Franklin Partnership. refs

Each of 16 Bolivian-phenotype squirrel monkeys of mixed sex had a machine bolt mounted on the skull with acrylic cement; 13 were provided with temporary plaster body casts allowing free movement. With eyes open, all were rotated in the horizontal plane at 30 rpm every other day until vomiting occurred or for a maximum duration of 120 min/spin. Latencies for motion-sickness signs were recorded under three experimental conditions: (1) free movement, (2) torso fixed to an aluminum frame and (3) both torso and head restrained by bolting to the frame. Subsequently, 10 monkeys from this sample were rotated while blindfolded with head and torso immobilized. Results partially confirmed human and animal findings reported by others: reduced mobility was accompanied by a reduction in the incidence and an increase in the latency of motion sickness. The importance of optokinetic input for the generation of motion sickness in this species was clear.

MICROBIOLOGICAL MANAGEMENT OF SPACELAB 3 RODENTS
G. A. FUNK and W. E. HINDS (Management and Technical Services Co., Moffett Field, CA) IN: Shuttle Environment and Operations II Conference, Houston, TX, November 13-15, 1985, Technical Papers . New York, AIAA, 1985, p. 70-74.
(AIAA PAPER 85-6090)

The 24 laboratory rats recently flown aboard Spacelab 3 were subjected to a stringent microbiological management program designed to minimize the risk to crew of animal-borne disease. The rodents had to be shown free of several specific microorganisms to be acceptable for flight. Efforts to acquire such rodents began with vendor testing one year before flight. No animals were shipped to Kennedy Space Center without immediate prior demonstration of the microbiogical acceptability of their source colony. All flight rodents were recertified to be in concurrence with flight requirements eight days before launch, and were tested upon landing to confirm their continued flight acceptability.

M. D. KHUDAIBERDIEV (AN TSSR, Institut Fiziologii i Eksperimental'noi Patologii Aridnoi Zony, Ashkhabad, Turkmen SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Aug. 1985, p. 952-957. In Russian. refs

A86-14595
NECK AND OCULOMOTOR REFLEXES INDUCED BY ELECTRICAL STIMULATION OF THE SEMICIRCULAR CANAL AMPULLAE IN THE PIGEON [SHEINYE I GLAZODVIGATEL'NYE REFLEKSY, VYZVANNYE ELEKTRICHESKOI STIMULIATSIEI POLUKRUZHNYKH KANALOV U GOLUBIA]
I. V. ORLOV (AN SSSR, Institut Fiziologii, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Aug. 1985, p. 977-984. In Russian. refs

The ampullae of horizontal, anterior, and posterior canals of the alert pigeon were stimulated by short electrical pulses of 1.2-1.5 microseconds duration in order to study the amplitudes and latency characteristics of synaptic responses. It is found that double pulses evoke a synchronized biphasic short-latency synaptic response in the neck muscles, their amplitudes depending on the interpulse delay. Angular acceleration of short pulse trains evoked eye movements in the plane of the simulated canal and the neck which were associated with the nystagmic rhythm. The experimental results are discussed within the framework of the central vestibulo-oculomotor integrator concept.
I.H.

A86-14714
ENCODING OF SPATIAL LOCATION BY POSTERIOR PARIETAL NEURONS
R. A. ANDERSEN, G. K. ESSICK, and R. M. SIEGEL (Salk Institute for Biological Studies, San Diego, CA) Science (ISSN 0036-8075), vol. 230, Oct. 25, 1985, p. 456-458. refs
(Contract NIH-EY-05522)

The cortex of the inferior parietal lobule in primates is important for spatial perception and spatially oriented behavior. Recordings of single neurons in this area in behaving monkeys showed that the visual sensitivity of the retinotopic receptive fields changes systematically with the angle of gaze. The activity of many of the neurons can be largely described by the product of a gain factor that is a function of the eye position and the response profile of the visual receptive field. This operation produces an eye position-dependent tuning for locations in head-centered coordinate space. Author

A86-15444
RADIATION-SICKNESS MECHANISMS [MEKHANIZMY LUCHEVOI PATOLOGII]
IU. B. KUDRIASHOV, ED. (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) Moscow, Izdatel'stvo Moskovskogo Universiteta, 1984, 140 p. In Russian. No individual items are abstracted in this volume.

Papers are presented concerning biophysical mechanisms of radiation sickness, the modification of cytogenic radiation effects by inhibitors of DNA synthesis, liver cell plasma membranes in animals with different radiation sensitivity, mechanisms of disorders of nitrogen and energy metabolism under ionizing radiation from various sources, and the effect of varying doses of ionizing radiation on the Na(+)-K(+)-ATPase in rat organs of different radiation sensitivity. Also included are papers concerning the injury and recovery of the blood regenerating system in the course of acute radiation sickness, the pathogenesis of the radiation-induced gastrointestinal syndrome, the heterogeneity of the critical systems as the principal factor determining their resistance to radiation, and regulation of the radiation resistance of an organism by altering the metabolic state of cellular mitochondria. In addition, synergistic effects in the radiobiology of bacteria and the general scheme of the modification of the radiation cell damage are discussed. I.S.

A86-15467
VISUAL-CONTRAST MEASUREMENT - MEASUREMENT OF THE SPATIAL TRANSFER FUNCTIONS OF THE VISUAL SYSTEM [VIZOKONTRASTOMETRIIA - IZMERENIE PROSTRANSTVENNYKH PEREDATOCHNYKH FUNKTSII ZRITEL'NOI SISTEMY]
IU. E. SHELEPIN, L. N. KOLESNIKOVA, and IU. I. LEVKOVICH Leningrad, Izdatel'stvo Nauka, 1985, 109 p. In Russian. refs

Theoretical and experimental studies of spatial transfer functions (TFs) of the visual system in normal and pathological vision are reviewed. Particular consideration is given to the interrelationship between the retinoscopic organization of the visual analyzer and the transfer of spatial information in this analyzer; a spatial-frequency analysis of the mechanisms underlying binocular vision; disorders of these mechanisms during amblyopia; and the unified character of spatial-temporal transfer functions. Techniques for the measurement of modulation transfer functions in clinical and experimental conditions are described. B.J.

A86-15474
MOLECULAR MECHANISMS OF CELL DEATH INDUCED BY RADIATION [MOLEKULIARNYE MEKHANIZMY RADIATSIONNOI GIBELI KLETOK]
K. P. KHANSON and V. E. KOMAR Moscow, Energoatomizdat, 1985, 152 p. In Russian. refs

Recent data concerning the mechanisms of radiation-induced cell death are presented. The role of structural and metabolic changes occurring in the genome, membranes, and metabolism of a cell in the course of reproductive, or 'mitotic', death and the interphase death are described. It is shown that the experimental data concerning the radiation dose/cell inactivation relationships can be successfully interpreted by means of different quantitative models for reproductive cell death. Programmed interphase cell death (PICD) is compared with the radiation-induced cell death, and a genetic hypothesis for the PICD is proposed. I.S.

A86-15513
BLOOD CIRCULATION CHANGES IN THE CAROTID ARTERIES POOL CAUSED BY ANTIORTHOSTASIS AND ANTIORTHOSTATIC HYPOKINESIA [IZMENENIE KROVOOBRASHCHENIIA V BASSEINE SONNYKH ARTERII PRI ANTIORTOSTAZE I ANTIORTOSTATICHESKOI GIPOKINEZII]
B. M. FEDOROV, E. N. STRELTSOVA, and T. V. SEBEKINA Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 755-762. In Russian. refs

The effect of antiorthostasis (AO) on circulation in the carotid pool was studied in healthy men placed in a -8 deg head-down tilt, and in anesthesized dogs subjected to -45 deg or -90 deg AO. The 5-day-long antiorthostatic hypokinesia in men led to a decreased blood flow in the carotid and orbital arteries, an increase in the peripheral resistance index, a decreased reactivity to the compression test, and a decreased functioning of the flow along the anterior communicating artery when the common carotid was compressed. During the later phases of the 30-day long AO, these blood flow indices tended to return to normal. In dogs, the AO led to a sharp increase in pressure in the jugular veins and in peripherals of the carotid pool, and to a decrease of blood flow rate in the carotid arteries. I.S.

A86-15521
NEUROCHEMICAL BASIS OF CHEMICAL THERMOREGULATION AND ARTIFICIAL HYPOBIOSIS [NEIROKHIMICHESKIE OSNOVY KHIMICHESKOI TERMOREGULIATSII I ISKUSSTVENNYI GIPOBIOZ]
N. N. TIMOFEEV (AMN SSSR, Institut Farmakologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 839-851. In Russian. refs

The state of hypothermia (HT) occurs when contractile or chemical thermogenesis (CT) is uncoupled from noncontractile thermoregulation. A block in CT can be achieved by interfering with the activation of the presynaptic membrane by noradrenaline (NA), thus preventing the release of acetylcholine. Four possible approaches that can be used to induce artificial HT are: depletion of stored NA from its adrenergic or adrenal pool, blocking the NA release, inhibition of catecholamine synthesis, and induction of the synthesis of faulty NA. The methods and drugs available for uncoupling CT by each of the four approaches, as well as various combinations of these, are described, together with the effects produced in the respective experiments. Clinical applications of artificial biogenesis in situations where deceleration of biological or pathological processes would be beneficial to the patient are discussed. I.S.

A86-15525
NEUROCHEMICAL MECHANISMS OF ARTIFICIAL HYPOBIOSIS AND CHEMICAL THERMOREGULATION [NEIROKHIMICHESKIE MEKHANIZMY ISSKUSSTVENNOGO GIPOBIOZA I KHIMICHESKOI TERMOREGULIATSII]
N. N. TIMOFEEV and G. A. KONSTANTINOV (AMN SSSR, Institut Farmakologii, Moscow, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Sept. 1985, p. 1145-1150. In Russian. refs

A state of hypobiosis not coupled with chemical thermoregulatory processes was induced in rats and rabbits by injecting the animals with ornid, a drug known to block the release of neuromediator from the adrenergic neurons. Within 1-2 hrs of i.p. injections (30 mg/kg for rats and 50 mg/kg for rabbits) and 1-2 min of 10 pct i.v./90 pct i.p. injections of ornid, the animals exhibited a 20-30 percent loss in the oxygen consumption and a lowering of emotional/stress reactions. There was no loss of arbitrary mobility or any evidence of shivering, attesting to the attainment of a hypobiotic state that was uncoupled from the chemical thermoregulation processes. The poikilothermic state could be maintained for 5-6 days at room temperature and could

be reversed without the use of any drug, by increasing the body temperature. I.S.

The second issue of the bimonthly digest of USSR Space Life Sciences is presented. Abstracts are included for 39 Soviet periodical articles in 16 areas of aerospace medicine and space biology and published in Russian during the first half of 1985. Selected articles are illustrated with figures from the original. Translated introductions and tables of contents for 14 Russian books on 11 topics related to NASA's life science concerns are presented. Areas covered are: adaptation, biospheric, body fluids, botany, cardiovascular and respiratory systems, cybernetics and biomedical data processing, gastrointestinal system, group dynamics, habitability and environmental effects, health and medical treatment, hematology, immunology, life support systems, metabolism, musculoskeletal system, neurophysiology, psychology, radiobiology, and space biology. Two book reviews translated from Russian are included and lists of additional relevant titles available either in English or in Russian only are appended. E.A.K.

ENVIRONMENTAL IMPACT RESEARCH PROGRAM. STATUS AND SOURCE OF HABITAT MODELS AND LITERATURE REVIEWS, DECEMBER 1984 Final Report
T. H. ROBERTS, L. J. ONEIL, and W. E. JABOUR Apr. 1985 18 p Revised
(AD-A156899; WES/MP/EL-85-1-REV) Avail: NTIS HC A02/MF A01 CSCL 06F

This report summarizes the status and availability of selected species habitat models and other habitat-related documents developed by the US Fish and Wildlife Service and other agencies. This listing is not comprehensive since many universities and other organizations are now involved with model development and testing. Animal groups included are birds, mammals, amphibians, reptiles, fish, molluscs, and other crustaceans. Information listed includes scientific name, special status of the species (if any), the organization responsible for the development of the model or the literature review, the stage of development of the document, and whether the document has received outside review or testing. RAMAN ACTIVITY IN SYNCHRONOUSLY DIVIDING BACTERIA
S. P. LAYNE 1985 12 p refs Presented at the Computer Anal. for Life Sci., Okayama, Japan, 9 Jul. 1985
(Contract W-7405-ENG-36)
(DE85-015672; LA-UR-85-2368; CONF-850784-1) Avail: NTIS HC A02/MF A01

Using a spectrometer equipped with an optical-multichannel analyzer as the detector (OMA), we have observed the Stokes laser-Raman spectra of metabolically active Escherichia coli and Bacillus magaterium from 100 to 2100 cm(-1). After lengthy investigation, no Raman lines attributable to the metabolic process nor the cells themselves were found. Previous Raman spectra of active bacteria cannot be used to support nonlinear theories in biology. DOE

MONITORING OF CIRCADIAN WAVEFORMS IN RODENTS EXPOSED TO HIGH-INTENSITY STATIC MAGNETIC FIELDS
T. S. TENFORDE, L. LEVY, and E. VEKLEROV Oct. 1984 38 p refs Presented at the 23rd Hanford Life Sci. Symp., Interaction of Biol. Systems with Static and ELF Elec. and Magnetic Fields, Richland, Wash., 2 Oct. 1984
(Contract DE-AC03-76SF-00098)
(DE85-015225; LBL-18384; CONF-841041-2) Avail: NTIS HC A03/MF A01

A system was developed for the noninvasive monitoring of circadian variables in mice exposed to a 1.50 T static magnetic field. The ambient light level, temperature and relative humidity within the exposure chamber are closely regulated, and physiological monitoring systems provide simultaneous measurements of seven circadian variables: (1) climbing activity on a triangular bar; (2) migratory activity; (3) body mass; (4) respired carbon dioxide; (5) nutrient consumption; (6) urine excretion; and (7) fecal excretion. Data from the various transducers and environmental monitoring devices within the exposure system are recorded on magnetic tape at 5-min intervals throughout experiments of 50 to 60 days duration, and the circadian waveforms of behavior and physiological parameters are analyzed by a modification of the cosiner method using a high-speed computer. Exposure of adult female LAF-1 mice to a 1.50-T homogeneous field for 5 continuous days, or for 10 consecutive days with intermittent daily exposures on an 8-hr-on/16-hr-off cycle, is found to produce no significant alterations in the circadian waveforms of behavioral or physiological parameters. DEVELOPMENT AND TESTING OF A MOUSE SIMULATED SPACE FLIGHT MODEL Semiannual Progress Report, May - Oct. 1985
G. SONNENFELD 1985 6 p refs
(Contract NCC2-213)
(NASA-CR-176359; NAS 1.26:176359; SAPR-6) Avail: NTIS HC A02/MF A01 CSCL 06C

The development and testing of a mouse model for simulating some aspects of weightlessness that occur during space flight, and the carrying out of immunological flight experiments on animals was discussed. The mouse model is an antiorthostatic, hypokinetic, hypodynamic suspension model similar to the one used with rats. It is shown that this murine model yield similar results to the rat model of antiorthostatic suspension for simulating some aspects of weightlessness. It is also shown that mice suspended in this model have decreased interferon-alpha/beta production as compared to control, nonsuspended mice or to orthostatically suspended mice. It is suggested that the conditions occuring during space flight could possibly affect interferon production. The regulatory role of interferon in nonviral diseases is demonstrated including several bacterial and protozoan infections indicating the great significance of interferon in resistance to many types of infectious diseases. From its inception, the main charter of Life Sciences has been to define biomedical requirements for the design and development of spacecraft systems and to participate in NASA's scientific exploration of the universe. The role of the Life Sciences Division is to: (1) assure the health, well being and productivity of all individuals who fly in space; (2) study the origin, evolution, and distribution of life in the universe; and (3) to utilize the space environment as a tool for research in biology and medicine. The activities, programs, and accomplishments to date in the efforts to achieve these goals are detailed and the future challenges that face the division as it moves forward from the shuttle era to a permanent manned presence in space space station's are examined. STUDY OF TOXIC AND ANTIGENIC STRUCTURES OF BOTULINUM NEUROTOXINS Annual and Final Report, 1 Aug. 1980 - 31 Aug. 1984
B. R. DASGUPTA Feb. 1985 14 p
(Contract DAMD17-80-C-0100; DA PROJ. 3M1-62770-A-871)
(AD-A156642) Avail: NTIS HC A02/MF A01 CSCL 06E

Amino acid compositions of botulinum neurotoxin (NT) types A, B, E and F were determined. The heavy and light chains of types A, B and E NT were separated, purified, and analyzed for amino acid compositions and partial N-terminal sequence. Selective modification of tyr, his and arg residues and also carboxyl and amino groups of types A and E NT demonstrated the role of these amino acid residues in toxicity and antiquenicity. Type E NT completely detoxified following modification of his, tyr or amino groups has potential as a toxoid. Effects of types A and B NT on rat neuromuscular junctions appear non-identical. NEW PHYSICAL METHODS FOR BIOLOGICAL AEROSOL DETECTION Contractor Report, Aug. 1982 - Sep. 1984
C. C. CHOU and M. LU May 1985 99 p
(Contract DAAK11-82-C-0113)
(AD-A158218; CRDC-CR-84131) Avail: NTIS HC A05/MF A01 CSCL 15B

For biological aerosol detection, Fourier transform secondary negative ion mass spectrometry appears to be on the forefront among various new analytical methods evaluated. Various gases liberated upon pyrolyzing bacterial cells lead to several possible techniques. Preliminary experimental results indicated an integrated detection system incorporating non-dispersive IR spectroscopy, piezoelectric sensing, and optical density change measurement would render a fast, accurate detection for pyrolysis gaseous products. SMALL X-RAY DIFFRACTION OF IMMUNOGLOBULIN-MEMBRANE COMPLEXES Final Technical Report, 15 Apr. 1981 - 14 Oct. 1984
S. DONIACH and K. HODGSON 15 Aug. 1985 8 p
(Contract N00014-81-K-0496)
(AD-A158252) Avail: NTIS HC A02/MF A01 CSCL 06A

In the first part of this research, specially designed hapten-phospholipid molecules were synthesized to enable the binding of immunoglobulins to artificial phospholipid membranes. In subdequent work, using these immunoglobulin-membrane complexes, electron microscopy was used to reveal the detailed crystalline structure of a two dimensional (2D) immunoglobulin crystal attached to an electron microscope grid. These studies enabled the discovery of a new conformational arrangement of crystals formed from intact immunoglobulin molecules. In a third part of the study, monolayers of protein-membrane complex (in this case the purple membrane from halobacterium halobium) were deposited on a single crystal silicon substrate. Using the technique of grazing incidence X-ray diffraction, diffraction patterns from a single monolayer of protein-lipid complex were obtained for the first time. GRA

DESIGN, CONSTRUCTION AND TESTING OF A DC BIOEFFECTS ENCLOSURE FOR SMALL ANIMALS Final Report
Jul. 1985 180 p refs Sponsored by EPRI
(Contract DE-AC06-76RL-01830; EPRI PROJ. 1774-1)
(DE05-016798; EPRI-EA-4189) Avail: NTIS HC A09/MF A01

Large air-ion concentrations moving in high-strength static electric fields are unique to the environment near high-voltage dc (HVdc) transmisison lines. To assess the possible biological effects of this environment, a small-animal exposure system was designed to produce well-characterized levels of the major components of the HVdc environment. Initial steps in the development of this exposure system included studies of various housing geometries and housing materials. Dielectric materials, such as plexiglass and lexan, unacceptably perturbed electric-field and air-ion environments in their vicinity these perturbations depended on the cleanliness of the housing materials and were spatially and temporally variable. Semiconducting materials were also investigated, with satisfactory results. The final cage design employs semiconducting glass walls which span the entire space between the grounded metal-screen cage floors the overhead high-voltage electrodes used to generate the exposure electric fields. The surface conductivity of the glass walls is controlled by a system of energized guard strips located on the outer surfaces of the walls. Electric-field strengths up to 100 kV/m and air-ion concentrations up to 1,000,000 cu b c, are attainable. Initial dosimetric measurements were also performed as part of this project. The ion current collected by the body of a grounded animal was measured as a function of ion concentration and electric-field strength. The ion current collected by a live animal was observed to be significantly less than that collected by a

conducting animal model of similar size and shape. This deviation appears to be due to accumulation of electric charge on the fur of exposed animals. DOE

MOLECULAR MECHANISMS OF MUTAGENESIS DETERMINED BY THE RECOMBINANT DNA TECHNOLOGY
W. R. LEE 1985 10 p refs Presented at the 4th Intern. Conf. on Environ. Mutagens, Stockholm, 24 Jun. 1985
(Contract DE-AS05-76EV-03728)
(DE85-016353; CONF-8506137-11) Avail: NTIS HC A02/MF A01

A study of the alteration of the DNA in the mutant gene can determine mechanisms of mutation by distinguishing between mutations induced by transition, transversion, frameshifts of a single base and deletions involving many base pairs. The association of a specific pattern of response with a mutagen will permit detecting mutants induced by the mutagen with a reduced background by removing mutations induced by other mechanisms from the pool of potential mutants. From analyses of studies that have been conducted, it is quite apparent that there are substantial differences among mutagens in their modes of action. Of 31 X-ray induced mutants, 20 were large deletions while only 3 showed normal southern blots. Only one mutant produced a sub-unit polypeptide of normal molecular weight and charge in the in vivo test whereas in vitro synthesis produced a second one. In contrast, nine of thirteen EMS induced mutants produced cross-reacting proteins with sub-unit polypeptide molecular weights equivalent to wild type. DOE

EFFECTS OF 60 HZ ELECTRIC FIELDS ON OPERANT AND SOCIAL STRESS BEHAVIORS OF NONHUMAN PRIMATES Project Technical Status Report, 16 Feb. - 12 Apr. 1985
W. R. ROGERS 19 Apr. 1985 33 p
(Contract DE-AC02-80RA-50219)
(DE85-011992; DOE/RA-50219/T4) Avail: NTIS HC A03/MF A01

The objective was to investigate possible behavioral effects of exposure to high-intensity 60 Hz electric fields. Four projects are conducted: (1) aversive sensory character of exposure to fields, (2) threshold intensity for detection of fields, (3) chronic exposure effects on performance of two operant tasks, and (4) observation of behavior of social groups under chronic exposure. Electric field testing with animals has begun. Behavioral testing was suspended for repair of cages and to suppress corona, and to conduct engineering tests. DOE

Avail: NTIS HC A18/MF A01 CSCL 06B

Normal erythrocytes are disc-shaped and are referred to here descriptively as discocytes. Several morphologically variant forms occur nomally but in rather small amounts, usually less than one percent of total. It has been shown though, that spiculed variant forms referred to as echinocytes are generated in significant amounts at zero g. Normal red cells have been stressed in vitro in an effort to duplicate the observed discocyte-echinocyte transformation at zero g. The significance of this transformation to extended stay in space and some of the plausible reasons for this transformation are discussed. Author

INTERACTION BETWEEN ESCHERICHIA COLI AND LUNAR FINES Final Report
K. R. JOHANSSON *In* NASA. Johnson (Lyndon B.) Space Center The 1983 NASA/ASEE Summer Faculty Fellowship Research Program Research Reports 21 p Sep. 1983 refs
Avail: NTIS HC A18/MF A01 CSCL 06B

A sample of mature lunar fines (10084.151) was solubilized to a high degree (about 17 percent) by the chelating agent salicylic acid (0.01. M). The neutralized (pH adjusted to 7.0) leachate was found to inhibit the growth of Escherichia coli (ATCC 259922) in a minimial mineral salts glucose medium; however, the inhibition was somewhat less than that caused by neutralized salicylic acid alone. The presence of lunar fines in the minimal medium was highly stimulatory to growth of E. coli following an early inhibitory response. The bacterium survived less well in the lunar leachate than in distilled water, no doubt because of the salicylate. It was concluded that the sample of lunar soil tested has nutritional value to E. coli and that certain products of fermentation helped to solubilize the lunar soil. Author

ENERGY EXCHANGE OF PLANTS UNDER WEIGHTLESSNESS CONDITIONS Abstract Only
M. G. TAIRBEKOV and A. V. DEVYATKO *In its* USSR Rept.: Space (JPRS-USP-85-005) p 80 30 Sep. 1985 Transl. into ENGLISH from Dokl. Akad. Nauk SSSR (Moscow), v. 280, no. 2, Jan. 1985 p 509-512 Original language document announced in IAA as A85-24193
Avail: NTIS HC A08

The plant energy-transfer experiment aboard the Cosmos-1514 biosatellite in December 1983 is considered. Heat release from corn sprouts was measured by a biocalorimeter operating in the 0 to 100 mW range. Results indicate that weightlessness has no effect on the intensity of energy transfer in sprouting seeds. The design of the biocalorimeter is described in some detail. IAA

A86-13298
PREDICTION OF THE FUNCTIONAL STATE OF THE BODY DURING ADAPTATION TO HIGH ALTITUDES [PROGNOZ FUNKTSIONAL'NOGO SOSTOIANIIA ORGANIZMA PRI ADAPTATSII K VYSOKOGOR'IU]
V. P. MAKHNOVSKII, E. I. KUZIUTA, and E. E. VOLKOV Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Aug. 1985, p. 50-52. In Russian.

The endurance of the cardiovascular system of 111 men aged 18-20 years was measured by the Flack stress method, first after a 20-day stay at 1700 m above sea level, and then during a 60-day adaptation to 3600 m. A control group remained at 800 m. The heart rate (HR), and the cystolic (CP) and mean arterial pressures were measured before and after stress, and the Kerdo index of the vegetative system (VIK) was calculated. According to the endurance results at 1700-m altitude, all men cold be grouped into 'strong' (S) and 'weak' (W) categories. The W group displayed sharp changes in HR and CP, which were only minimal and transitory in men of the S group. The changes in the VIK were negative and transitory in the S group, and positive in the W group. The results at 3600 m have confirmed the prognosis made at the lower altitude: the functional parameters in the subjects of the S group returned to normal after only 30 days of adaptation, while the W group remained unadapted even after 60 days. I.S.

A86-13299
DETERMINATION OF VESTIBULAR ASYMMETRY WITH APPLICATION TO AVIATION MEDICINE [OPREDELENIE VESTIBULIARNOI ASIMMETRII PRIMENITEL'NO K ZADACHAM VRACHEBNO-LETNOI EKSPERTIZY]
E. V. LAPAEV and O. A. VOROBEV Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Aug. 1985, p. 53-56. In Russian. refs

Nystagmic (N), vestibulo-spinal (V-S) and vestibulo-vegetative stability (V-VS) reactions, both spontaneous and those caused by rotatory and caloric stimulations of the semicircular canals, were measured in pilots, flight trainees and non-flying (C) subjects. It was found that the V-S asymmetry increased in all subjects after 12-hr night-time wakefulness. The N and V-S asymmetries were significantly lower in the flight crew and trainees than in C subjects. Some pilots disclosed hidden functional asymmetry after prolonged flights. The methods of testing, its evaluation, and the need for additional analyses (concerning the changing character of the expression and direction of the N, V-S and V-VS asymmetry reactions) are discussed. I.S.

A86-13300
THE USE OF REFLEX THERAPY IN THE PROPHYLAXIS AND TREATMENT OF MOTION SICKNESS [ISPOL'ZOVANIE REFLEKSOTERAPII V PROFILAKTIKE I LECHENII UKACHIVANIIA]
A. L. IVANOV and V. M. SNITKO Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Aug. 1985, p. 56, 57. In Russian. refs

The results of measuring the electric conductivity (EC) at 24 acupuncture relief points (APs) known to be most functionally labile and to reflect the state of the twelve standard acupuncture channels are reported. It was found that the channels of the heart, three torso sections, spleen-pancreas, small intestine, and urinary bladder were most indicative in terms of the changes of EC. The changes in EC were either negative (APs in the channels of the trunk and small intestine) or positive (in the other three channels). Based on these results the electropuncture method was used successfully to ameliorate the symptoms of sea sickness in the sensitive crew and passengers during long-term sea trips. I.S.

A86-13567
COMPLETE RIGHT BRANCH BLOCKING AND THE FLIGHT FITNESS OF PILOTS [BLOC DE BRANCHE COMPLET GAUCHE ET APTITUDE A L'EMPLOI DANS LE PERSONNEL NAVIGANT]
J. P. OLLIVIER, J. DRONIOU (Hopital d'Instruction des Armees Val-de-Grace, Paris, France), G. LEGUAY, and A. SEIGNEURIC (Hopital d'Instruction des Armees Dominique Larrey, Versailles, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 143-147. In French. refs

The rates, ages of occurrences and noninvasive means of detecting complete right branch blocking (CBB) in pilots is examined, together with the implications of CBB for flight fitness certification. A study was performed of 23 middle-aged humans with CBB and no previous history of cardiac problems or symptoms. The subjects submitted to ECG, echocardiography, myocardial scintography, angiography, coronography and catheterization. No correlation was found between risk factors, e.g., smoking, cholesterol intake and high blood pressure, and CBB. A series of tests were developed for identifying asymptomatic CBB. The onset of symptoms is considered sufficient reason to perform a catheterization. It is concluded that although there is only a 15 percent chance of detecting CBB, the seriousness of the condition is sufficient reason for conducting a series of tests on middle-aged pilots, who cannot be certified as flight-fit if CBB is found. M.S.K.

A86-13568
POSITIVE PRESSURE RESPIRATION, A MEANS OF PROTECTING AGAINST +GZ ACCELERATIONS - A THEORETICAL APPROACH [LA RESPIRATION EN PRESSION POSITIVE, MOYEN DE PROTECTION CONTRE LES ACCELERATIONS +GZ - APPROCHE THEORIQUE]
H. MAROTTE and H. VIEILLEFOND (Centre d'Essais en Vol, Bretigny-sur-Orge, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 147-149. In French. refs

A literature review was carried out to examine the possibility that deep breathing by pilots of jet aircraft will serve as a replacement for M1 maneuvers to offset long duration high-g acceleration-induced loss of functioning. The object of deep breathing, as with the M1 maneuver, is to enhance the arterial cerebral perfusion of blood. It was found that deep breathing must commence before initiating high-g maneuvers, a difficult task in flight combat conditions. Finally, there is a limit to the length of time that deep breathing can safely be performed. M.S.K.

A86-13572
NONHYPOXIC SYNCOPES AT HIGH ALTITUDE - THE RESULTS OF TWO OBSERVATIONAL TRIALS IN A HYPOBARIC CHAMBER [SYNCOPES NON HYPOXIQUES EN ALTITUDE - A PROPOS DE DEUX OBSERVATIONS EN CAISSON HYPOBARE]
H. MAROTTE, H. VIEILLEFOND, and J. POIRIER (Centre d'Essais en Vol, Bretigny-sur-Orge, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 169-172. In French.

Two instances of loss of consciousness were observed in successive trials with subjects in a pressure chamber. One subject sat for 120 min at a simulated 17,000 ft altitude; the second trial simulated a climb to 60,000 ft, while being supplied with oxygen at a level equivalent to 128 kPa. The second subject lost consciousness during simulated descent, following the onset of hyperventilation 40 min into the session. With regard to fighter pilots, the first subject behaved as if experiencing an anxiety attack prior to blacking out. Either unconscious episode could have occurred to pilots in high altitude flight; neither would be detectable by post-accident investigations. M.S.K.

A86-13573
THE BENDS AT HIGH ALTITUDE [LA MALADIE DE DECOMPRESSION D'ALTITUDE]
H. VIEILLEFOND Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 185-193. In French.

Aircrew can experience the bends after sudden decompression in high altitude flight. The bends is the formation of N2 gas bubbles in the muscle tissues as the gas escapes the bodily fluids due to a lowered partial pressure of the atmosphere holding the gas in the liquids. An analysis is carried out of the processes by which some of the excess N2 is expelled through the lungs, while too slow an expulsion allows bubbles to form. The pressure differential has to be from 1.5-1.6 for the bubbles to form. Consideration is also given to the effects of the temporal duration at an altitude, the age and sex of the person, the ambient temperature, and protective measures (e.g., denitrogenation). M.S.K.

INVESTIGATION OF EUSTACHIANAL FUNCTION IN JASDF PILOTS BY NEW APPARATUS. I - ON THE PRESSURAL REGULATION OF THE EUSTACHIAN TUBE IN NORMAL HUMAN
J. OKUBO, Y. MANO, M. SHIBAYAMA, S. TAKAHASHI, N. DOI (Tokyo Medical and Dental University, Japan) et al. Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, June 1985, p. 41-48. In Japanese, with abstract in English. refs

A device has been designed and built to measure the sound pressure inside the Eustachian tube during the ventilation process. The device, a sonotubometer operates using a 7-kHz octave band noise which corresponds to the low frequency sound load of the Eustachian tube. Sonotubometer measurements of the duration and amplitude of sound during dry swallowing were obtained in children and adult men and women in order to evaluate the effectiveness of the device. The results were used to calibrate the device for high-altitude measurements of Eustachian sound in JASDF pilots. I.H.

A86-14310
PSYCHOMOTOR PERFORMANCE AFTER FORWARD-FACING IMPACT
B. F. HEARON and J. W. BRINKLEY (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1043-1051. refs
(Contract F33615-83-C-0500)

The effect of a forward-facing whole-body impact (-Gx) on psychomotor performance (PP) was studied on ten male subjects using the manikin psychomotor task (Reader et al., 1981), which is a complex reaction time and response accuracy test. The impact severity (at 0, 8, 10, and 12 G levels) was tested in the AFAMRL Horizontal Decelerator Facility, using two initial head positions (up or forward) at the 12 G impact level. No statistically significant evidence of impaired PP upon the increasing severity of impact was found in this test. However, significantly lower angular head acceleration was observed at 12 G when the head was prepositioned forward and downward prior to the impact than when it was positioned upright, strapped against the headrest. Thus, the potential for temporary stunning of aircrew personnel during an operational crash landing or ditching may be reduced by positioning the head forward and downward, if time permits, prior to an imminent crash. I.S.

BLOOD PRESSURE AND PLASMA RENIN ACTIVITY AS PREDICTORS OF ORTHOSTATIC INTOLERANCE
M. H. HARRISON, S. E. KRAVIK, G. GEELEN, L. KEIL, and J. E. GREENLEAF (NASA, Ames Research Center, Moffett Field, CA) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1059-1064. refs

The effect of 3 h standing, followed by a period of head-up tilt (HUT) on physiological response (orthostatic tolerance, blood pressure and heart rate), as well as on plasma vasopressin (PVP) and renin activity (PRA) were studied in 13 dehydrated (to 2.4 pct loss of body weight) subjects. Seven subjects showed signs of orthostatic intolerance (INT), manifested by sweating, pallor, nausea and dizziness. Prior to these symptoms, the INT subjects exhibited lower systolic (SP) and pulse (PP) pressures, and an elevated PRA, compared to the tolerant (TOL) subjects. HUT has aggravated increases of RPA in the INT subjects and caused an increase, higher than in TOL subjects, in PVP, while rehydration has greatly attenuated the PVP response to the HUT and decreased the PRA response. It is concluded that dehydration, together with measurements of SP, PP and PRA, may serve as a means of predicting orthostatic intolerance and may provide a physiological model for studying the causes of intolerance. I.S.

TACHYGASTRIA AND MOTION SICKNESS
R. M. STERN, K. L. KOCH, H. W. LEIBOWITZ, I. M. LINDBLAD, C. L. SHUPERT (Pennsylvania State University, University Park) et al. Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1074-1077. refs
(Contract NIH-EY-03276)

Cutaneously-recorded electrogastrograms (EGGs) were obtained from 21 healthy volunteers who were seated within a drum, the rotation of which produced vection or illusory self-motion. Fourteen subjects developed symptoms of motion sickness during vection and in each the EGG frequency shifted from the normal 3 cpm to 5-8 cpm, tachygastria, an abnormal pattern. In 6 of 7 asymptomatic subjects, the 3 cpm EGG pattern was unchanged during vection. It was concluded that illusory self-motion produces tachygastria and motion sickness in susceptible subjects. ALDOSTERONE, CORTISOL, AND ELECTROLYTE RESPONSES TO HYPOBARIC HYPOXIA IN MODERATE-ALTITUDE NATIVES
C. M. MARESH, B. J. NOBLE, K. L. ROBERTSON, and J. S. HARVEY, JR. (Wyoming, University, Laramie; Midwest Research Institute, Kansas City, MO) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1078-1084. Research supported by the University of Wyoming. refs

The effect of 2-d decompression at simulated high altitude (4270 m, 447 mm Hg) on blood and urine aldosterone (Aldo), cortisol (C), and electrolyte concentrations, all measured three times a day, were studied in seven low-altitude (373 m, 740 mg Hg) natives, LAN, and nine moderate-latitude (1830-2200 m, 585 mg Hg) natives, MAN, aged 19-25 yr. The LAN group has demonstrated higher serum C concentration and respiration rates, and lower serum Aldo and K concentrations, as well as lower urinary Aldo, Na and K concentrations at certain times during decompression, compared to their home values. On the other hand, the respective parameters in the MAN group were basically unchanged at the high altitude. Moreover, manifestations of acute mountain sickness at 4270 m were significantly lower in the MAN than in the LAN group, indicating smaller effect of the drop of ambient oxygen tension in the MAN group. BLOOD PRESSURE LEVELS OF ACTIVE PILOTS COMPARED WITH THOSE OF AIR TRAFFIC CONTROLLERS
C. F. BOOZE, JR. (FAA, Civil Aeromedical Institute, Oklahoma City, OK) and L. S. SIMCOX (Oklahoma, University, Okalahoma City) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1092-1096. refs

Currently some 15,212 active airmen are certified to fly with a diagnosis of hypertension. Federal Aviation Administration blood pressure standards for certification of airmen are considered to be quite liberal. A systematic sample of pre-strike air traffic controllers was extracted from automated medical files maintained by the Aeromedical Certification Branch of the Civil Aeromedical Institute for comparison with airman data. Distributions of blood pressure by age were compared by using conventional non-parametric techniques for 10-year age intervals. Data were also compared with general population findings. Prevalence of hypertension is greater in the general United States population than found with any of the groups reported here. Prevalence of borderline and definite hypertension is seen to increase with age for all groups studied. Prevalence of any degree of hypertension is lower for airline pilots than either the all-airmen group or the air traffic controller group. Author

EFFECT OF EXPOSURE TO HEAT, HYPOXIA, COLD, ACCELERATION, AND VIBRATION STRESS ON THE TOTAL BLOOD SULFHYDRYL GROUPS IN HUMAN SUBJECTS
E. M. IYER, M. B. DIKSHIT, and S. SURYANARAYANA (Indian Air Force, Institute of Aviation Medicine, Bangalore) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1097-1101. Sponsorship: Indian Armed Forces. refs
(Contract IARF PROJECT 1247/1981)

The effect of various types of stress on the rate of utilization of the total blood thiols (bl-SH), measured as an index of activity of the hypophyseal-sympathoadrenocortical (H-SAC) system, was studied in 100 healthy air force personnel. Total bl-SH changes caused by exposures to elevated temperature and relative humidity (RH), cold pressure test, hypoxia, acceleration, low-frequency vibration, and head-up tilt were measured by the method of Ellman. Exposure to a hot, dry environment (57 C, 25 pct RH) and hot, humid environment (50 C, 50 pct RH) and to 4572 m simulated altitude for 50 min, all caused significant decreases in bl-SH (49.7, 61.0 and 36.7 pct, respectively), as did a 2-min long hand immersion into 4 C water (42.7 pct decrease) and acceleration (to up to 4.3 Gz for various periods of time), indicating a stimulating effect of these stresses on the H-SAC system. On the other hand, sinusoidal vibration at 4.9 Hz caused a 42.7 percent rise in bl-SH, suggesting inhibition of the H-SAC system by this stress. The 70 deg head-up tilt produced no change in bl-SH. I.S.

UNSTEADY BLOOD FLOW IN HUMANS UNDER ARTIFICIAL CONDITIONS [NESTATSIONARNYI KROVOTOK U CHELOVEKA V ISKUSSTVENNYKH USLOVIIAKH]
E. N. MESHALKIN, I. P. VERESHCHAGIN, IU. A. VLASOV, E. E. LITASOVA, G. N. OKUNEVA et al. Novosibirsk, Izdatel'stvo Nauka, 1984, 232 p. In Russian. refs

Physiological studies of human body under conditions of anethesia and light hypothermia during open-heart surgery are presented. It is concluded that the disengaging the heart from the rest of the cardiovascular system does not result in complete cessation of blood flow and vital processes, i.e., in clinical death. Low level of metabolism and limited capillary blood flow are maintained. However, application of protective measures during the cardiac disengagement is necessary for the support of the body metabolism. The protective effect of limited biothermia during the open-heart surgery is discussed. The observed changes in the blood cell morphology, lymph flow, and immunoglobulins during interrupted cardiovascular circulation indicate an increased level of lymph circulation within the closed system consisting of tissue capillaries, intercellular fluid, lymphatic vessels, central lymph stream, vena cava superior, peripheral veins, and vascular capillaries. I.S.

HEMODYNAMICS DURING SHORT-TERM APPLICATION OF LOWER BODY NEGATIVE PRESSURE [GEMODINAMIKA PRI KRATKOVREMENNOM OTRITSATEL'NOM DAVLENII NA NIZHNIUIU CHAST' TELA]
M. M. MIRRAKHIMOV, T. A. AZHIMAMATOV, and T. B. BALTABAEV (Kirgizskii Nauchno-Issledovatel'skii Institut Kardiologii, Frunze, Kirgiz SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 763-769. In Russian. refs

The effect of lower body negative pressure (LBNP) on the cardiovascular functions was studied in 42 normal male subjects aged 31-64 yrs, using noninvasive methods of electrocardiography, phonocardiography and tetrapolar thoracic rheography. The responses to the LBNP included increases in heart rate and in systemic vascular pressure, decreases in the heart rate and the cardiac indices as well as in the volumes of the cardiac chambers, caused by partial detainment of blood in the large-capacity blood vessels of the lower body. The degree of these changes depended on the magnitude of applied LBNP, which was in the range of 20-60 mm. Rapid (2-3 sec) decompression caused the temporarily detained blood to enter the circulation, leading to short-term increases of the cardiac volume load and to reversal of the hemodynamic effects caused by the LBNP. I.S.

TYPOLOGICAL ANALYSIS OF CENTRAL AND PERIPHERAL HEMODYNAMICS DURING ORTHOSTASIS IN NORMAL SUBJECTS AND IN PATIENTS WITH ARTERIAL HYPERTONIA [TIPOLOGICHESKII ANALIZ TSENTRAL'NOI I PERIFERICHESKOI GEMODINAMIKI V ORTOSTATIKE U ZDOROVYKH LITS I BOL'NYKH S ARTERIAL'NOI GIPERTONIEI]
V. A. DARTSMELIIA, G. S. BELKANIIA, and A. N. DEMIN (AMN SSSR, Nauchno-Issledovatel'skii Institut Eksperimental'noi Patologii i Terapii, Sukhumi, Georgian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 770-777. In Russian. refs

The effect of active orthostasis (OS) on the hemodynamics of the central and peripheral circulation systems was studied in normal subjects and in patients in the first and second stages of arterial hypertonia (AH). The hemodynamic shifts and changes in the redistribution indices brought about by OS relative to the clinostatic (control, C) state were measured by use of tetrapolar rheography. The characteristic parameters were measured 30 min after the subjects were put into horizontal position, and then 1, 5, 10, 15, and 20 min after they were transferred into the state of OS. Three orthostatic types of circulation were observed in both C and AH subjects. The observed differences in the circulation types and the changes in the redistribution shifts effected by the OS in both groups of subjects are discussed from the viewpoint of the diagnosis of AH severity and possible therapeutic applications. I.S.

TYPES OF WORK CAPACITY AND THE FREQUENCY OF THE DEVELOPMENT OF ISCHEMIC HEART DISEASE AND HYPERTONIC DISEASE [TIPY RABOTOSPOSOBNOSTI I CHASTOTA RAZVITIIA ISCHEMICHESKOI BOLEZNI SERDTSA I GIPERTONICHESKOI BOLEZNI]
I. IU. BORISOVA, N. A. KRUCHININA, and S. V. CHERNIGOVSKAIA (AN SSSR, Institut Fiziologii, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 778-782. In Russian. refs

A test was conducted on 309 male engineers, who were divided into two types according to the circadian rhythm of their work capacity (WC): (1) the differentiated (D) type, whose WC is optimal either in the morning or in the evening; and (2) the undifferentiated (UD) type, whose WC was uniform throughout the day. All subjects were tested for arterial hypertension (AH) and for heart ischemia (HI) in the beginning of the study and 6.5 years later. The rate of occurrence of the initially diagnosed HI disease was twice as high in the subjects of the D type than in the UD subjects, while the frequency of AH was found to be unrelated to the WC type. Six years later, new cases of HI disease among the first-time suspected HI subjects were found to occur 2.5 times as frequently in the D subjects than in the UD subjects. Moreover, in the subjects with initially marginal AH, new cases of hypertension occurred twice as often in the D types than in the UD subjects. I.S.

COMPARISON BETWEEN THE ANTIHYPOXIC EFFECTIVENESS OF DRUGS AND PRESSURE-CHAMBER TRAINING [SRAVNITEL'NAIA KHARAKTERISTIKA ANTIGIPOKSICHESKOI EFFEKTIVNOSTI FARMAKOLOGICHESKIKH PREPARATOV I BAROKAMERNOI TRENIROVKI CHELOVEKA]
E. A. KOVALENKO, A. IU. KATKOV, V. L. POPKOV, M. P. BOBROVNITSKII, R. N. CHABDAROVA et al. Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 808-813. In Russian. refs

Resistance to induced acute hypoxia (AH) was determined in subjects before and after 3-day training (three daily 1-hr periods) in an altitude chamber at either 5000, 6000, or 7500 m, with or without exercise and compared to the effect produced by a single dose of antihypoxic drugs, tiguril and sidnocarb. AH was induced by either a rapid (20 m/sec) rise to high altitude (Method I) or successive 10-min periods at 5000, 6000, etc., up to 10,000 m altitude levels (Method II) and was monitored by measuring the heart beat frequency, breathing frequency, arterial pressure, respiration volume, and by electroencephalography. Resistance to AH induced by either method could be significantly increased by 3-day training at 6000 m and above, with no effect of physical exercise, and remained high for the next 10 or 20 days. Single doses of tiguril (25 mg/kg) or sidnocarb (0.35 mg/kg) were as effective as high-altitude training against AH induced by Method II but not by Method I. I.S.

LEUKOCYTIC REACTIONS CAUSED BY EMOTIONAL STRESS [LEIKOTSITARNYE REAKTSII PRI EMOTSIONAL'NOM NAPRIAZHENII]
N. M. PLOTNIKOVA, E. V. BELOVA, and T. A. PALOSOVA (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 829-833. In Russian. refs

The effect of 25-45-min periods of emotional stress (ES) upon leukocytic reactions (LR) was evaluated in male students during the course of an academic year and an examination period. The state of ES was induced by assigning to subjects mental tasks which were to be performed in conditions of time shortage and continuous critical comments by the experimenter. The leukocyte counts and the excretion rate of total 17-ketosteroids (17-KS) were determined 2-3 min preceding the ES period, 2-3 min following its completion, and 1 hr later. The majority (39 out of 71 total) of the ES subjects exhibited one of two leukocyte reactions: a decrease in the number of leukocytes and lymphocytes (reaction of stress), or a rise of neutrophiles (reaction of adaptation). The levels of excreted 17-KS changed in the subjects with LR, but were not related to the type of LR. I.S.

COMPARATIVE ANALYSIS OF CORTICOSTEROID AND CATECHOLAMINE LEVELS EXCRETED IN URINE OF PERSONS WITH DIFFERENT OCCUPATIONS [SRAVNITEL'NYI ANALIZ SODERZHANIIA KORTIKOSTEROIDEV I KATEKHOLAMINOV V MOCHE U LITS S RAZLICHNOI PROFESSIONAL'NOI PODGOTOVKOI]
K. M. SMIRNOV, A. A. VIRU, and T. A. SMIRNOVA (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Okhrany Truda, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 834-838. In Russian. refs

The effect of occupation (of 5 types, including intellectual activity) and work conditions on the excretion (in two 24-hr periods) of 17-oxycorticosteroids (17-OXS), adrenaline (A), and noradrenaline (NA) was studied in healthy men (aged 18-47 yrs) not engaged in athletic activities. Excretion of A and NA was found to be higher in persons whose work involved continuous responsibility and thus emotional stress (e.g., in operators of control boards) or adverse environmental conditions (cold, noise), although only NA rose above the accepted physiological norm levels. The level of 17-OXS in these groups was slightly raised. The maximal levels of the 17-OXS, A, and NA excretion occurred at different diurnal periods (morning, day, or evening), and the excretion of a particular compound could maximize differently in different groups. I.S.

PREDICTION OF HUMAN PHYSICAL WORK CAPACITY IN HIGH-TEMPERATURE ENVIRONMENTS [PROGNOZIROVANIE FIZICHESKOI RABOTOSPOSOBNOSTI CHELOVEKA V USLOVIIAKH VYSOKIKH TEMPERATUR VNESHNEI SREDY]
O. S. GORETSKII, V. A. MAKSIMOVICH, L. S. SHEVCHENKO, and D. IA. MIRONIUK (Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Donetsk, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 852-855. In Russian. refs

Various physiological and biochemical factors were analyzed in 200 healthy men aged 20-30 yrs before exposure to work (61 watt) in a hot environment and correlated with their ergothermic resistance (ETR), using several statistical models (Sepetliev, 1968; Gubler, 1978). The values of the erythrocyte thermal resistance, the ratio of the measured peripheral pressure to its normal value, the ratio of the measured vital lung capacity of its normal value, the vegetative index of Kerdo, the cardiac index, and the content of creatine in urine were found to be most informative in predicting ETR. Correlation analysis using combinations of these values made it possible to predict the expected ETR with 70-75 percent reliability. I.S.

A86-15523
USE OF A LINGUISTIC TEST IN THE COURSE OF LARGE-SCALE PHYSIOLOGICAL SELECTION OF MEN FOR WORK IN AN ADVERSE ENVIRONMENT [PRIMENENIE LINGVISTICHESKOGO TESTA PRI MASSOVOM FIZIOLOGICHESKOM OTBORE DLIA RABOTY V EKSTREMAL'NYKH USLOVIIAKH]
V. I. MEDVEDEV, D. L. SPIVAK, A. A. AIDARALIEV, and R. KURMANALIEVA (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Sept.-Oct. 1985, p. 861, 862. In Russian. refs

Preliminary estimates of adaptability to a high-altitude environment were obtained on the basis of a short written test, conducted by the method of Spivak (1983), on 1500 men stationed in the mountains. Such linguistic indices as the number of words used to answer the stated questions, the number of verbs used, syntagmatic associations, and changes in verbal strategy were used to assess advancing fatigue and adaptability. Relatively good adaptability was characterized by a more regularly predictable linguistic strategy. The estimates made by the linguistic test showed good correlation with the results of the physiological evaluation of adaptability. I.S.

SPACE MOTION SICKNESS PREFLIGHT ADAPTATION TRAINING PRELIMINARY STUDIES WITH PROTOTYPE TRAINERS
D. E. PARKER, L. OUYANG (Miami University, Oxford, OH), J. C. ROCK, H. E. VON GIERKE (USAF, Wright-Patterson AFB, OH), M. F. RESCHKE (NASA, Johnson Space Center, Houston, TX) et al. IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 8 p. Research supported by Miami University and USAF. refs
(Contract NAS9-14538)
(IAF PAPER 85-311)

Based on the otolith tilt-translation reinterpretation hypothesis (Parker et al., 1985), preflight adaptation procedures and several preflight adaptation trainers (PATs) have been developed. Two PAT prototypes, the Miami University Seesaw (MUS) and the Dynamic Environmental Simulator (DES), include a physical room that is moved relative to the restrained subject. Results from the MUS and DES PAT experiments indicate that exposure to the produced sensory rearrangement can change eye movement reflexes. The changes persisted for a period longer than the training exposure period, indicating similarity with the eye-movement reflexes observed immediately postflight in weightlessness-adapted astronauts. It is concluded that the apparatus and procedures to preadapt astronauts to the sensory rearrangement of weightless space flight can be developed on the basis of the reported PATs and procedures. The third PAT prototype tested, which employs a computer-generated scene, failed to produce changes similar to those recorded in the MUS and DES experiments. I.S.

SPACELAB EXPERIMENTS ON SPACE MOTION SICKNESS
C. M. OMAN (MIT, Cambridge, MA) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 17 p. refs
(Contract NCC9-1; NAS9-15343)
(IAF PAPER 85-312)

Recent research results from ground and flight experiments on motion sickness and space sickness conducted by the Man Vehicle Laboratory are reviewed. New tools developed include a mathematical model for motion sickness, a method for quantitative measurement of skin pallor and blush in ambulatory subjects, and a magnitude estimation technique for ratio scaling of nausea or discomfort. These have been used to experimentally study the time course of skin pallor and subjective symptoms in laboratory motion sickness. In prolonged sickness, subjects become hypersensitive to nauseogenic stimuli. Results of a Spacelab-1 flight experiment are described in which 4 observers documented the stimulus factors for and the symptoms/signs of space sickness. The clinical character of space sickness differs somewhat from acute laboratory motion sickness. However SL-1 findings support the view that space sickness is fundamentally a motion sickness. Symptoms were subjectively alleviated by head movement restriction, maintenance of a familiar orientation with respect to the visual environment, and wedging between or strapping onto surfaces which provided broad contact cues confirming the absence of body motion. THE HUMAN CARDIOVASCULAR SYSTEM IN THE ABSENCE OF GRAVITY
M. W. BUNGO and J. B. CHARLES (NASA, Johnson Space Center, Houston, TX) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 5 p. refs
(IAF PAPER 85-315)

The data collected from a Space Shuttle crew to investigate cardiovascular changes due to microgravity are presented. The experimental procedures which involved preflight, immediate postflight, and one week following postflight echocardiograms of 13 individuals are described. The immediate postflight results reveal a 20 percent decrease in stroke volume, a 16 percent decrease in left ventricular diastolic volume index (LVDVI), no change in systolic volume, blood pressure, or cardiac index, and a 24 percent increase in heart rate. One week later a 17 percent stroke volume increase, a 29 percent increase in cardiac index, and normal blood pressure, and LVDVI were observed. It is concluded that upon reexposure to gravity a readaptation process for the cardiovascular system occurs. I.F.

RED BLOOD CELL DECREASES OF MICROGRAVITY
P. C. JOHNSON (NASA, Johnson Space Center, Houston, TX) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 8 p.
(IAF PAPER 85-324)

Postflight decreases in red blood cell mass (RBCM) have regularly been recorded after exposure to microgravity. These 5-25 percent decreases do not relate to the mission duration, workload, caloric intake or to the type of spacecraft used. The decrease is accompanied by normal red cell survivals, increased ferritin levels, normal radioactive iron studies, and increases in mean red blood cell volume. Comparable decreases in red blood cell mass are not found after bed rest, a commonly used simulation of the microgravity state. Inhibited bone marrow erythropoiesis has not been proven to date, although reticulocyte numbers in the peripheral circulation are decreased about 50 percent. To date, the cause of the microgravity induced decreases in RBCM is unknown. Increased splenic trapping of circulating red blood cells seem the most logical way to explain the results obtained.

UNDERSTANDING METABOLIC ALTERATIONS IN SPACE FLIGHT USING QUANTITATIVE MODELS - FLUID AND ENERGY BALANCE
J. I. LEONARD (GE Management and Technical Services Co., Washington, DC) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 21 p. refs
(Contract NAS9-15487; NAS9-16328; NAS9-15850; NAS9-17151)
(IAF PAPER 85-325)

The results of an integrated multidisciplinary and multiexperimental investigation, using data from the Skylab program, of metabolic adaptation to space flight are summarized and discussed. The effects of space flight on fluid-electrolyte regulation, mechanisms of hormone disturbances, energy balance, and the etiology of weight loss are emphasized. A composite picture of the fluid, electrolyte, and energy response to weightlessness, based primarily on data gathered from the nine Skylab crewmen, is presented. C.D.

DEVELOPMENT OF COUNTERMEASURES FOR USE IN SPACE MISSIONS
A. E. T. NICOGOSSIAN, S. POOL, C. S. L. HUNTOON, and J. I. LEONARD (NASA, Washington, DC) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 4 p. refs
(IAF PAPER 85-327)

Several measures used to mitigate the inappropriate adaptive responses of space flight are investigated. Weightlessness results in a cephalic fluid shift, which causes a reduction in the circulating blood volume, and removal of weight bearing forces from musculoskeletal systems. The physiological changes that occur from one-g initiated hypovolemia and zero-g initiated fluild shifts are analyzed and compared. The role of barorecptors on the activation of the adrenergic responses that occurs as a result of hypovolemia is studied. The proper selection and administration of in-flight and post flight countermeasures, which include passive and active physical conditioning techniques, drugs, and vitamins are examined. I.F.

EFFECTS OF HEMODILUTION ON O2 TRANSPORT IN HIGH-ALTITUDE POLYCYTHEMIA
R. M. WINSLOW, C. C. MONGE, E. G. BROWN, H. G. KLEIN, F. SARNQUIST (PHS, Centers for Disease Control, Atlanta, GA; Universidad Peruana Cayetano Heredia, Lima, Peru; Mt. Sinai Medical Center, New York; National Institute of Health, Bethesda, MD; Stanford University, CA) et al. Journal of Applied Physiology (ISSN 0161-7567). vol. 59, Nov. 1985, p. 1495-1502. refs
(Contract NSF INT-77-21795; NSF INT-80-07728)

A native of the Peruvian Andes (4,250 m) was studied before and after isovolemic hemodilution of the hematocrit from 62 to 42 percent. O2 transport was studied with newly developed catheters in the radial and pulmonary arteries. These catheters allowed continuous measurement of arteriovenous O2 content and intermittent cardiac output by thermodilution. During exercise tests, breath-by-breath gas exchange measurements also allowed cardiac output to be calculated by the O2-Fick technique. A complex series of interrelated physiological changes occurred in response to hemodilution. These included increased ventilation, increased arterial and mixed venous PO2, increased cardiac output (both heart rate and stroke volume), and improved ventilation-flow match. The general improvement in symptoms that followed hemodilution correlated well with increased anaerobic threshold and mixed venous PO2 during exercise. Author

EFFECTS OF CATION IONS IN NERVE EXCITATION
K. AIHARA, M. KOTANI, and T. UTSUNOMIYA *In its* Res. Rept. of the Faculty of Eng., Tokyo Denki Univ., No. 32 p 67-78 Dec. 1984 refs In JAPANESE; ENGLISH summary
Avail: NTIS HC A09/MF A01

A bifurcation process of the self-sustained oscillation state of action potentials as a dissipative structure in squid giant axons is theoretically analyzed in relation to a nonequilibrium property inherent to biological membranes. A bifurcation diagram is numerically calculated by the use of the modified Hodgkin-Huxley equations which are derived by considering both an adaptation effect of axons and an effect of divalent cations upon membrane conductance. Further, the result is confirmed by the Hopf bifurcation theory. These analyses clarify the relations between the Hopf bifurcation of the dissipative structure with the limit cycle in squid giant axons and the nonequilibrium property of the ionic concentration differences across the membrane. HUMAN HEMODYNAMIC CHANGE UNDER HIGH ATMOSPHERIC PRESSURE
Z. HENGDU and D. DUANYANG *In its* China Rept.: Sci. and Technol. (JPRS-CST-85-030) p 55-56 4 Sep. 1985 Transl. into ENGLISH from Jiefangjun Yixue Zazhi (Beijing), no. 1, 20 Feb. 1985 p 63
Avail: NTIS HC A08/MF A01

For the purpose of observing human hemodynamic change under high atmospheric pressure, nontraumatic means were adopted to record sphygmograms during a 26 day continuous nitrogen-oxygen saturation dive simulation trial 36.5 m. The test subjects assumed a supine position and the sphygmogram was recorded on closed vessels on the left side using a mercurial sphygmomanometer to measure blood pressure in the arteria brachialis of the left arm. The data from the initial measurements was processed through electronic computer. The voluntary test subjects were seven young males averaging 22.6 + or - 3.9 years of age. The simulated pressure measured 4.65 ATA, cabin temperature was 26.05 + or - 0.8 deg C and relative humidity measured 70.3 + or - 0.9 percent. Differential pressure measured 0.31 + or - 0.08 ATA for oxygen, 0.002 ATA for carbon dioxide and 4.34 ATA for nitrogen. The subjects lived and worked under the above conditions for 26 continuous days and nights and underwent 4 days of decompression to return to normal pressure. The results of these tests are briefly decribed. Author

INFRARED OPTICAL MEASUREMENT OF BLOOD GAS CONCENTRATIONS AND FIBER OPTIC CATHETER Patent
T. J. MANUCCIA and J. G. EDEN, inventors (to Navy) 9 Apr. 1985 7 p
(AD-D011836; US-PATENT-4,509,522;
US-PATENT-APPL-SN-331091; US-PATENT-CLASS-128-634)
Avail: US Patent and Trademark Office CSCL 06L

This patent pertains to a simple compact optical device and method for quickly measuring the concentration of CO and CO2, bound to hemoglobin or dissolved in a person's blood using optical techniques which do not require removing a blood sample from the body. It also provides a simple fiber optic device for measuring blood-gas concentrations of critical internal points of the circulatory system such as the aorta. GRA

PLASMA VOLUME METHODOLOGY: EVANS BLUE, HEMOGLOBIN-HEMATOCRIT, AND MASS DENSITY TRANSFORMATIONS
J. E. GREENLEAF and H. HINGHOFER-SZALKAY Nov. 1985 25 p refs
(NASA-TM-86834; REPT-85406; NAS 1.15:86834) Avail: NTIS HC A02/MF A01 CSCL 06P

Methods for measuring absolute levels and changes in plasma volume are presented along with derivations of pertinent equations. Reduction in variability of the Evans blue dye dilution technique using chromatographic column purification suggests that the day-to-day variability in the plasma volume in humans is less than + or - 20 m1. Mass density determination using the mechanical-oscillator technique provides a method for measuring vascular fluid shifts continuously for assessing the density of the filtrate, and for quantifying movements of protein across microvascular walls. Equations for the calculation of volume and density of shifted fluid are presented. E.A.K.

FORWARD FIELD AUTOTRANSFUSION DEVICE Patent Application
E. I. SCHWEITZER and K. G. SWAN, inventors (to Army) 10 May 1985 12 p
(AD-D011763; US-PATENT-APPL-SN-732335) Avail: NTIS HC A02/MF A01 CSCL 06L

A typical embodiment of the invention enables blood to be drawn from the pleural cavity of an injured patient for autotransfusion purposes. A chest tube is connected to an inlet check valve within a resilient bulb suction pump. Blood, drawn into the bulb, is expelled therefrom by manipulating the bulb to cause the blood to flow out of the bulb through a filter and a discharge check valve to a blood collection bag. GRA

SUTURE NEEDLE HOLDER Patent Application
E. J. SCHWEITZER and J. R. BRESCH, inventors (to Army) 3 Jun. 1985 15 p
(AD-D011764; US-PATENT-APPL-SN-740610) Avail: NTIS HC A02/MF A01 CSCL 06L

A typical embodiment on the invention enables a surgeon to occupy only one hand in manipulating a suture needle. The instrument thumb handle has, on one end, a freely rotatable short

roller. The ring finger handle, moveover, has a long roller that is journalled within that handle. One end of the long roller bears against the short roller to form a nip that engages the suture needle. The other end of the long roller terminates near the ring finger handle grip to enable the surgeon to rotate the long roller with another finger of the same hand and thereby draw the needle through the nip, repositioning the needle for another stitch. ENERGY EXPENDITURE AND ACTIVITY PATTERNS OF CADETS AT THE UNITED STATES MILITARY ACADEMY, WEST POINT, NEW YORK Final Report, for Period Ending Oct. 1979
M. J. KRETSCH, M. O. OCONNOR, and H. E. SAUBERLICH Jun. 1985 42 p
(AD-A157857; LAIR-IR-200) Avail: NTIS HC A03/MF A01 CSCL 06P

A study was conducted in October, 1979, at the United States Military Academy, West Point, New York, to evaluate factors contributing to weight gain in cadets over the course of their academic career. This report presents the average daily energy expenditure (EE) and activity patterns of male and female cadets. A total of 136 male and 54 female cadets from the classes of 1980, 1981, 1982, and 1983 were studied. Five consecutive days (Wednesday through Sunday) of activity data were collected from each study participant by the factorial method. The average pattern of EE usage was similar between male and female cadets: about 20% at rest; 35 to 40% in very light activities; 5 to 10% in light activities; about 25% in moderate activities; and the remaining 5 to 15% in heavy or very heavy activities. Average energy expenditure when expressed as kcal/kg body weight was not significantly different between male and female cadets of the same class for weekdays or weekend days. There was a tendency for the cadets to become more sedentary with advance in class. This was more noticeable for the females than for the males. There was a significant decrease in weekday, but not weekend day, EE for the females with advance in class. This same decrease was not significant for the male cadets, but there was a weekday trend in that direction. For the females, the lower weekday EE for the 1980 and 1981 classes may be explained by the lower amount of energy and time spent in running and sports activities. Whether the decrease in weekday EE with advance in class is due to differences in program requirements should be examined. GRA

THE EFFECTS OF HYPOXIA INDUCED BY LOW ATMOSPHERIC PRESSURE ON SOFT CONTACT LENS WEAR Final Report, 1 Jun. 1983 - 1 Jan. 1985
W. J. FLYNN, R. E. MILLER, II, M. G. BLOCK, and T. J. TREDICI Jun. 1985 16 p
(Contract AF PROJ. 2729)
(AD-A158556; USAFSAM-TR-85-30) Avail: NTIS HC A02/MF A01 CSCL 06L

Contact lens use in aviation has long been a subject of debate and controversy. One of the major concerns for contact lens wear at altitude is the potential for corneal edema and subsequent visual degradation, due to the reduced levels of oxygen available for normal corneal metabolism. Four subjects were tested, wearing both high-and low-water content soft contact lenses, for visual changes and adverse corneal physiological responses due to hypoxia induced by an atmospheric pressure level equivalent to 10,000 ft. Results of this study indicate that, although the cornea is placed under higher levels of physiological stress at an altitude of 10,000 ft, the absence of visual degradation or significant symptoms suggests that lenses can be safely worn under the conditions of this study. (Contract DE85-AI08-78EV-01577)
Avail: NTIS HC A06/MF A01

Mortality, by cause of death, was studied on a cohort of 46,186 participants in one or more of five test series. The series studied were UPSHOT-KNOTHOLE (1953) and PLUMBBOB (1957) at the Nevada Test Site, and GREENHOUSE (1951), CASTLE (1954), and REDWING (1956) which were conducted at the Pacific Proving Ground at Enewetak and Bikini. The number of deaths attributed to particular causes was compared with the number expected to occur at US cause and age-specific mortality rates. A total of

5113 deaths from all causes was ascertained; this was 11.1% of the number of participants. The number was, however, only 83.5% of the number expected at US mortality rates. Mortality from leukemia among the 3554 participants at SMOKY - 10 deaths below age 85 - were 2.5 times the expected number. When the leukemia deaths are compared to other deaths in all six data sets, the differences among the series are not significant. No cancer other than leukemia was ascertained to have occurred in significant excess among SMOKY participants and the number of deaths from other cancers (67) was less than the number expected at population rates (83.8). The total body of evidence cannot convincingly affirm or deny that the higher than statistically expected incidence of leukemia among SMOKY participants (or of prostate cancer among REDWING participants) is the result of radiation exposure incident to the tests. ACCIDENTAL EXPOSURE TO AMERICIUM
K. R. HEID Apr. 1985 13 p refs Presented at the Health Phys. Summer School Conf., Evanston, Ill., 3 Jun. 1985
(Contract DE-AC06-76RL-01830)
(DE85-012794; PNL-SA-13155; CONF-8506136-1) Avail: NTIS HC A02/MF A01

An accident in which a 64 year old Hanford nuclear worker was exposed to high levels of americium while working in an americium recovery facility in 1976 is described. As a result of the accident, he was heavily externally contaminated with americium, sustained with a substantial internal deposition of this isotope, and was burned with concentrated nitric acid and injured by flying debris about the face and neck. The immediate and longer term treatment given the patient, including the decontamination efforts and clinical laboratory studies, are discussed. Special in vivo equipment and techniques were used to measure the americium deposited in the patient. These and subsequent in vivo measurements were used to estimate the dose rates and the accumulated doses to body organs. Urinary and fecal excreta were collected and analyzed for americium content. The interpretation of these data was complicated by the fact that the intake resulted both from inhalation and from solubilization of the americium embedded in facial tissues as a result of the accident. A total of 1100 (MU)Ci was excreted in urine and feces during the first 2 years following the accident. The long term use of diethylenetriaminepentaacetic acid (DTPA), used principally as the zinc salt, is discussed including the method, route of administration, and effectiveness. To date, the patient has apparently experienced no complications attributable to this extensive course of therapy, even though he was given approximately 560 g of DTPA. DOE

ENDOCRINE AND FLUID METABOLISM IN MALES AND FEMALES OF DIFFERENT AGES AFTER BEDREST, ACCELERATION AND LOWER BODY NEGATIVE PRESSURE
C. S. LEACH, J. VERNIKOS-DANELLIS (NASA. Ames Research Center), J. M. KRAUHS (Northrop Services, Inc., Houston, Tex.), and H. SANDLER (NASA. Ames Research Center) Nov. 1985 52 p refs
(NASA-TM-58270; S-550; NAS 1.15:58270) Avail: NTIS HC A04/MF A01 CSCL 06S

Space shuttle flight simulations were conducted to determine the effects of weightlessness, lower body negative pressure (LBNP), and acceleration of fluid and electrolyte excretion and the hormones that control it. Measurements were made on male and female subjects of different ages before and after bedrest. After admission to a controlled environment, groups of 6 to 14 subjects in the age ranges 25 to 35, 35 to 45, 45 to 55 to 65 years were exposed to +3 G sub z for 15 minutes (G1) and to LBNP (LBNP1) on different days. On 3 days during this prebedrest period, no tests were conducted. Six days of bedrest followed, and the G sub z (G2) and LBNP (LBNP2) tests were run again. Hormones, electrolytes, and other parameters were measured in 24-hour urine pools throughout the experiment. During bedrest, cortisol and aldosterone excretion increased. Urine volume decreased, and specific gravity and osmolality increased. Urinary electrolytes were statistically unchanged from levels during the non-stress control period. During G2, cortisol increased significantly over its control and bedrest levels. Urine volume, sodium, and chloride were significantly lower; specific gravity and osmolality were higher during the control period or bedrest. The retention of fluids and electrolytes after +G sub z may at least partially explain decreased urine volume and increased osmolality observed during bedrest in this study. There were some who indicated that space flight would not affect the fluid and electrolyte metabolism of females or older males any more severely than it has affected that of male astronauts. Author

THE EFFECT OF SPIRONOLACTONE ON THE CARDIOCIRCULATORY RESPONSES TO UPRIGHT TILT AT SEA LEVEL AND AT SIMULATED HIGH ALTITUDE
C. S. FULCO, R. LARSEN, P. B. ROCK, A. J. YOUNG, and A. CYMERMAN 19 Jun. 1985 18 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A157734; USARIEM-M33/85) Avail: NTIS HC A02/MF A01 CSCL 06O

The objective of this study was to determine if spironolactone (S) alters the cardiocirculatory responses to upright tilt at sea level (SL;50m) and during 44 hours of simulated altitude (HA;4600m). In a double-blind, crossover-designed study, 9 male subjects (age range: 18 to 25 years) received 25 mg orally, 4x/day of either S or an identically-appearing placebo (P) 2 days prior to and during HA. The crossover was separated by two weeks. Heart rate, stroke volume, cardiac output, calf blood flow, total peripheral resistance and system blood pressure were obtained during supine rest and after 10 minutes of 60 degree head-up tilt using an impedance monitor and an electro-sphygmomanometer. Twenty-four hour determinations of urinary volume, sodium and potassium, as well as venous plasma values for sodium, potassium and chloride were obtained daily. There were no statistically significant differences between P and S treatment periods for: caloric, electrolytes; of fluid ingestion; urinary volume or electrolytes; plasma electrolytes; or any of the cardiocirculatory parameters measured in the supine or upright position at SL or during HA. It was concluded that S did not induce a significant diuresis or significantly alter vascular responsiveness to negatively effect the normal cardiocirculatory responses to upright tilt at sea level or simulated high altitude. GRA

ENHANCING SENSITIVITY TO VISUAL MOTION AND ENHANCING VISUAL SENSITIVITY Interim Report, 1 Oct. 1981 - 30 Sep. 1983
R. SEKULER 4 Jun. 1985 28 p
(Contract AF-AFOSR-0246-80)
(AD-A158800; AFOSR-85-0668TR) Avail: NTIS HC A03/MF A01 CSCL 06P

This report describes progress made from October 1, 1981 to September 30, 1983. During this period work proceeded on three main lines of study: (1) various aspects of visual motion perception, (2) collaborative work on contrast sensitivity and pilots' performance in aircraft simulators, and 3) individual differences in responses to temporal transients. The most extensive of the three work-units dealt with motion perception by human observers. The main findings include the following: (1) Perceived speed of a moving target varies with that target's contrast and retinal eccentricity. In particular, many targets undergo illusory slowing when they appear in the periphery in the visual field, (2) detection of a moving target is often dissociated from the ability to identify the direction in which the target moves. In particular, the accuracy with which target direction can be judged, even for highly visible targets, seems to far less good than previously suspected, (3) relatively small amounts of training can significantly improve an observer's ability to discriminate between two highly similar directions of target motion. Moreover, this effect is well-restricted to the training direction and other, similar directions; the training effect is retained without decrement for at least two months. The results suggest that this improvement with training represents a genuine change in visual function. GRA

PILOT-ORIENTED PERFORMANCE MEASUREMENT Final Report, Jan. - Dec. 1983
J. DEMAIO, H. H. BELL, and J. BRUNDERMAN Aug. 1985 15 p
(Contract AF PROJ. 2313)
(AD-A158849; AFHRL-TP-85-18) Avail: NTIS HC A02/MF A01 CSCL 14B

Aircrew performance measurement is a critical problem in evaluating the quality of a visual simulation system and in determining the effectiveness of aircrew training devices. An effective performance measurement system must be able to separate performance into appropriate components and describe the relationship of these components. This paper describes a performance measurement system developed to analyze pilot performance in maintaining altitude in both straight and turning flight as a function of the object density of the simulated visual environment. The analysis indicates that pilot performance can be divided into perceptual and task difficulty factors and that the effect of the visual environment on each of these factors can be determined. A prototype performance measurement system was developed to describe pilot performance in a simulator. The pilot's task was to maintain altitude at 200 feet both in straight and in turning flight. Pilot performance was sensitive to task difficulty and to visual scene quality. The strength of this performance measurement system was that it analyzed performance in terms of overall task performance and also specific pilot control inputs. GRA

HEALTH HAZARD EVALUATION OF LIQUID MONOPROPELLANTS. PHASE 5: COMPARATIVE INHALATION TOXICITIES OF LGP 1776, LGP 1845, AND HAN (HYDROXYLAMMONIUM NITRATE) Final Report
H. L. SNODGRASS, JR. Jun. 1985 33 p
(AD-A159090; USAEHA-75-51-0132-85) Avail: NTIS HC A03/MF A01 CSCL 06T

A comparison of the inhalation toxicities of two liquid gun propellant (LGP) formulations, LGPs 1776 and 1845, was made using rats. Also assessed was the major chemical component of each, hydroxylammonium nitrate (HAN). Rats exposed to saturated vapors of the two LGPs for 8 hours were uneffected. Following single acute aerosol exposures, LGP 1845 was more toxic, with deaths occurring at concentrations of 1350 to 1603 mg/cu m. After 5 or 10 daily aerosol exposures to the three formulations, comparable dose-dependent effects were noted. These included hematological, organ-to-body weight ratio, and pathological changes, generally at the highest exposure level of 600 mg/cu m. It is concluded that acute exposures to LGP vapors should not be hazardous to man. Also inferred is that the effects of repeated, sublethal exposures to LGPs 1776 and 1845 are quantitatively similar to those observed with HAN, the major chemical component. GRA

MOURNING AND TRAUMATIC NEUROSES - CLINICAL ASPECTS AND AERONAUTICAL INCIDENTS FOR ONE HELICOPTER PILOT [DEUIL ET NEVROSE TRAUMATIQUE - ASPECTS CLINIQUES ET INCIDENCES AERONAUTIQUES CHEZ UN PILOTE D'HELICOPTERE]
J. C. DUBOUIS-BONNEFOND (Armee de l'Air, Centre Medical de Psychologie Clinique, Paris, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 155-158. In French. refs

The case history of the onset, progression, diagnosis and analysis of the traumatic neuroses which rendered a military helicopter pilot unable to continue flying are summarized in terms of general principles. The trauma was initiated by the deaths of several other pilots in the same squadron due to air accidents. The pilot eventually could not handle his own aircraft, had continuous nightmares about death and helicopters, and began expressing guilt for his friends' deaths. He became aggressive toward superiors and was relieved of flight duty, after which the anguish-driven behavior patterns diminished, followed by depression. The application of a number of personality profile tests supported previous speculation that a pilot's professional attitude and ignorance of death actually suppresses a continuous awareness of death. Life events, on or off duty, which expose the pilot to the reality of death remove the psychic barriers to the continuous perception of terminal hazards faced by pilots. The pilot may then need to be retrained for some other task. M.S.K.

PSYCHOLOGICAL STATES OF STUDENT PILOTS IN FLIGHT TRAINING
M. OKAUE and Z. TAKASHIMA Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, June 1985, p. 67-79. In Japanese, with abstract in English. refs

Questionnaire responses from 83 Japanese flight students were analyzed in order to evaluate the psychological state of the inexperienced pilot in flight. The distribution of flight experience in the class was: 33 primary level students; 26 students in the middle grades; and 24 advanced students. The effect of classroom performance on the prevalence of anxiety among the students is discussed. Attention is given to some of the psychological pressures contributing to pilot errors, including missed approaches; spin; and off runway landings. I.H.

CHANGES OF FLYING SKILLS DURING NON-FLIGHT PERIODS
Z. KATOH, A. KADOO, Y. NAGASAWA, T. OBATA, and N. IGUCHI Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, June 1985, p. 81-104. In Japanese, with abstract in English. refs

Flight data from 28 training pilots were analyzed with respect to changes in flying skill during non-flight periods. On board flight data recordings and questionnaries concerning the self-estimation of pilot skill were evaluated with respect to three maneuvers: vertical S-Alpha (VSA); a steep turn (STP); and a horizontal turn (HRZ). A brief summary of the results is provided. I.H.

THE PERCEPTION OF MOTION DURING COLINEAR EYE MOVEMENTS
H. WALLACH, D. NITZBERG (Swarthmore College, PA), and R. BECKLEN (Sarah Lawrence College, Bronxville, NY) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 1, July 1985, p. 18-22. refs
(Contract NSF BNS-83-18772)

When the eyes are engaged in pursuit movements, the image of a stationary object shifts on the retina, but such a target is either perceived as stationary or seems to move only little. This is the result of a compensation process called position constancy, which takes the eye movements into account. Becklen, Wallach, and Nitzberg (1984) reported that position constancy does not operate when the target undergoes a motion of its own, in a direction that differs from the direction of the eye movements. Other findings have indicated that position constancy has an effect when the target motion is colinear with the eye movements, but the accuracy with which it then operates has not been known. How correctly motions that were colinear with eye movements were perceived is measured and it is found that the extents of target motions were accurately perceived when they were in the same direction as the eye movement, but that position constancy showed a small, but distinct, lag when eye-movement and target motions were in opposite directions. PHYSIOLOGICAL REFLECTIONS OF MENTAL WORKLOAD
P. A. HANCOCK, N. MESHKATI, and M. M. ROBERTSON (Southern California, University, Los Angeles) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1110-1114. refs

Results of studies of the effect of mental workload on the major physiological responses (e.g., the auditory canal temperature, ACT; galvanic skin response, GSR; electrocardiogram, ECG; heart rate variability, HRV; event-related potentials, ERP; flicker and critical fusion frequencies, FFs; muscle tension, MT; respiration, R; body fluid responses, BF; etc.) are presented. The differing physiological measures were plotted in a two-dimensional space, the x-axis of which represented relevance to actual central nervous system (CNS) activity, while the y-axis, the measure, low or high of practical application (P). The measurements of HRV and ACT were the most practical parameters, whereas the ERP are rated as the most superior indices of CNS activity. ECG, GSR and FF rated lowest on the CNS axis. ACT is discussed as a potential optimal composite measure. I.S.

A STUDY OF THE PSYCHOPHYSICAL MEASUREMENT ON FLUCTUATING SOUND BY A STOCHASTIC APPROXIMATION METHOD
H. KADO Electrotechnical Laboratory, Researches (ISSN 0366-9106), no. 852, March 1985, 80 p. In Japanese, with abstract in English. refs

The loudness and perceived rate of fluctuating sound are studied. The psychophysical measurement of fluctuating sound is discussed, and an adaptive psychophysical measurement method is developed and evaluated theoretically. This method consists of an adaptive searching method applying stochastic approximation to obtain the response to the presented stimuli using a step-by-step procedure, and a numerical searching method in nonlinear problems to estimate unknown parameters numerically. The loudness of Gaussian fluctuating sound is measured, and the perceived rate of the fluctuating envelope is determined. The correlation of the fluctuating sound value to psychological effects is addressed. The results can be used to construct a loudness meter. C.D.

THE EFFECT OF HIGH SPATIAL FREQUENCIES ON VISUAL RECOGNITION PROCESSES [VLIIANIE VYSOKIKH PROSTRANSTVENNYKH CHASTOT NA PROTSESSY ZRITEL'NOGO RASPOZNAVANIIA]
E. D. BORISOVA and O. P. TAIROV (Leningradskii Gosudarstvennyi Universitet, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Sept. 1985, p. 1067-1071. In Russian. refs

The effect of optical filtering (OF) of the high-frequency component from the spatial-frequency spectra of numerical images on the probability of recognition was studied in healthy right-handed subjects. Exposition time was varied from 20 msec to 1000 msec, and recordings were made of the correctness of answers, the latency of the answer periods, and the changes in the time-amplitude characteristics of the visual evoked potential (EP) in the occipital 01 and 02 area leads. Defocussing of the images by OF led to a decrease in recognition probability and in the amplitudes of negative (N1) and positive (P2) waves of the late phases of EPs. As the extreme spatial frequency of the image increased, the spike latencies of the N1 wave increased, and those of the P2 wave decreased. It is suggested that the N1 wave reflects the activation of selectively set spatial frequency filters of the visual sensory system, while the P2 wave reflects decision-making processes in recognition. I.S.

THE VISUAL STRESS MODEL - A PSYCHO-PHYSIOLOGICAL METHOD FOR THE EVALUATION OF OPERATIONAL RELIABILITY OF PILOTS AND COSMONAUTS
H. HAASE and H. KAMMEL (Gesellschaft fuer Weltraumforschung und Raumfahrt, Berlin, East Germany) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 23 p.
(IAF PAPER 85-326)

A psychophysiological investigative method for evaluating visual-cognitive performance preconditions and operational reliability is presented. The method applies reafferent stress which expresses typical aspects of information processing in the cockpit. Changes in operational, psychological, and physiological parameters before, during, and after the test stress are recorded simultaneously. Psychological question blanks before and after the test are used to record stress-implicated changes in the state of subjective feelings. The test results are useful for the dynamic evaluation of operational performance, the physiological reaction profile, the dimensions of the experienced stress, and the efficiency of coping with test requirements. THE HELICOPTER TO FIXED WING CONVERSION PROGRAM: A CRITICAL REVIEW
L. T. MASSEY Apr. 1985 39 p
(AD-A156820; ACSC-85-1750) Avail: NTIS HC A03/MF A01 CSCL 05I

USAF helicopter pilots are initially trained by the U.S. Army through their undergraduate helicopter pilot training program. Four to seven years later, some of these pilots have the opportunity to convert to fixed wing aircraft via the fixed wing conversion program currently conducted by sending selected helicopter pilots through Air Force undergraduate pilot training. This study reviews these programs and assesses the impact this training philosophy has on career opportunities for helicopter pilots, both for those who convert to fixed wing systems, as well as for those who remain in helicopters. Two alternatives are presented which would resolve the problems identified. The study concludes that the USAF could provide better career opportunities for helicopter pilots, as well as improve experience levels in the helicopter force, by enacting changes to current training programs. STIMULUS STRUCTURES AND MENTAL REPRESENTATIONS IN EXPERT COMPREHENSION OF COMPUTER PROGRAMS Technical Report, Sep. 1982 - Jan. 1985
N. PENNINGTON Jan. 1985 110 p
(Contract N00014-82-K-0759)
(AD-A157520; TR-2-ONR) Avail: NTIS HC A06/MF A01 CSCL 05J

The difficulty of computer programming and other design tasks is a function of the multiple abstractions that combine to form a program's meaning. Thus, comprehension of the final form of a program design, the program text, involves retrieving multiple sets of relationships between parts. The research presented here addresses which, if any, abstraction is dominant psychologically in programmers' mental representation of programs, specifically whether procedural (control flow) or functional (goal hierarchy) abstractions dominate, and the relative ease or difficulty of inferring different kinds of information from the text. Eighty professional programmers were tested on comprehension and recognition of short program texts. The results, which suggest that procedural rather than functional units form the basis of expert programmers' mental representations, support work in other areas of test comprehension showing the importance of test structure knowledge in understanding. The results also raise questions concerning claims that chunking found in comprehension and memory tasks in skilled problem solving domains is due to pattern matching to schematic content knowledge rather than to knowledge of more abstract text or design structure units. The Cognitive Science Laboratory is a part of both the Institute for Cognitive Science and the Center for Human Information Processing at their University of California, San Diego. Work in the laboratory is aimed at developing a deeper understanding of the theory and applications of human information processing. The research aims of the laboratory are broad, but all the work follows a common theoretical view of cognition, providing a cohesion that binds the separate studies together, despite the apparent wide differences in content. All of the work can be characterized as being Studies of Human Cognition. This is the main focus of the laboratory's efforts, and over the years the work has covered in-depth problems within the areas of preception, attention, learning, memory, language, thought, and action. Special emphasis has been placed on knowledge representation, and one major contribution of the laboratory has been within the area: The representational structure known as Active Structural Networks. Work in this general area is always in process elaborated and modulated by the results and progress of work in the speciality areas. Three specialty areas can be talked about separately. GRA

A NEW HAZARD FUNCTION ESTIMATOR OF PERFORMANCE TIME Technical Report, Oct. 1983 - Jul. 1984
B. BLOXOM Nov. 1984 35 p
(AD-A157843; NPRDC-TR-85-10) Avail: NTIS HC A03/MF A01 CSCL 05J

The analysis of performance time is used to study a wide variety of manpower, training, and human factors problems in the Navy. The cumulative distribution of performance time provides some indication of the rate of performance, but it can lead to false conclusions as well. One method of measuring the rate of performance with a shifting residual basis of analysis, called hazard analysis, consists of estimating a hazard function, which shows the rate of performance as a function of time. Although various procedures have been developed for estimating a hazard function, none of the procedures has been shown to produce plausibly smooth and precise estimates under a variety of conditions. This research proposed a constrained quadratic spline as an estimator or the hazard function of performance time. A maximum penalized likelihood procedure was used to fit the estimator to a sample of psychological response times. The procedure was also used in a simulation study of the precision of the estimator. GRA

DIAGNOSING COGNITIVE ERRORS: STATISTICAL PATTERN CLASSIFICATION AND RECOGNITION APPROACH
K. K. TATSUOKA Jan. 1985 36 p
(Contract N00014-82-K-0604; RR0-4204)
(AD-A158108; IU-CERL-RR-85-1-ONR) Avail: NTIS HC A03/MF A01 CSCL 05J

This paper introduces a probabilistic model that is capable of diagnosing and classifying cognitive errors in a general problem-solving domain. The model is different from the usual deterministic strategies common in the area of artificial intelligence because the item response theory is utilized for handling the variability of response errors. As for illustrating the model, the dataset obtained form a 38-item fraction addition test is used, and the students' responses are classified into 34 groups of misconceptions. These groups are predetermined by the result of an error analysis previously done, and validated with the error diagnostic program written by a typical formal logic approach. GRA

EFFECTS OF DIGITAL ALTIMETRY ON PILOT WORKLOAD
R. L. HARRIS, SR. and B. J. GLOVER Nov. 1985 20 p refs
(NASA-TM-86424, L-15989; NAS 1.15:86424) Avail: NTIS HC A02/MF A01 CSCL 05H

A series of VOR-DME instrument landing approaches was flown in the DC-9 full-workload simulator to compare pilot performance, scan behavior, and workload when using a computer-drum-pointer altimeter (CDPA) and a digital altimeter (DA). Six pilots executed two sets of instrument landing approaches, with a CDPA on one set and a DA on the other set. Pilot scanning parameters, flight performance, and subjective opinion data were evaluated. It is found that the processes of gathering information from the CDPA and the DA are different. The DA requires a higher mental workload than the CDPA for a VOR-DME type landing approach. Mental processing of altitude information after transitioning back to the attitude indicator is more evident with the DA than with the CDPA. E.A.K.

HYPOTHESIZING AND REFINING CAUSAL MODELS
R. J. DOYLE Dec. 1984 109 p
(Contract N00014-80-C-0505; NR PROJ. RR0-1408)
(AD-A158165; AI-M-811) Avail: NTIS HC A06/MF A01 CSCL 06D

An important common sense competence is the ability to hypothesize causal relations. This paper presents a set of constraints which make the problem of formulating causal hypotheses about simple physical systems a tractable one. The constraints include: (1) a temporal and physical proximity requirement; (2) a set of abstract causal explanations for changes in physical systems in terms of dependences between quantities; and (3) a teleological assumption that dependences in designed physical systems are functions. These constraints were embedded in a learning system which was tested in two domains: a sink and a toaster. The learning system successfully generated and refined naive causal models of these simple physical systems. The causal models which emerge from the learning process support causal reasoning explanation, prediction, and planning. Inaccurate predictions and failed plans in turn indicate deficiencies in the causal models and the need to rehypothesize. Thus, learning supports reasoning which leads to further learning. The learning system makes use of standard inductive rules of inference, as well as the constraints of casual hypotheses to generalize its casual models. Finally, a simple example involving an analogy illustrates another way to repair incomplete causal models. GRA

GENERATING AND GENERALIZING MODELS OF VISUAL OBJECTS Memorandum Report
J. H. CONNELL and M. BRADY Jul. 1985 26 p
(Contract N00014-80-C-0505; N00014-77-C-0389)
(AD-A158197; AI-M-823) Avail: NTIS HC A03/MF A01 CSCL 06D

We report on initial experiments with an implemented learning system whose inputs are images of two-dimensional shapes. The system first builds semantic network descriptions of shapes based on Brady's smoothed local symmetry representation. It learns shape models from them using a substantially modified version of Winston's ANALOGY program. A generalization of Gray coding enables the representation to be extended and also allows a single operation, called ablation, to achieve the effects of many standard induction heuristics. The program can learn disjunctions, and can learn concepts using only positive examples. We discuss learnability and the pervasive importance of representational hierarchies. GRA

(Contract F49620-83-C-0059)
(AD-A158732; REPT-0059-85-1; AFOSR-85-0664TR; AR-2)
Avail: NTIS HC A03/MF A01 CSCL 05J

The experiment was concerned with the effects of varied cognitive and perceptual (i.e., monitoring) demands on patterns of physiological responding. Cognitive demands were varied by manipulating the number of letters (1, 3, or 5) comprising a briefly-presented set which the subject was instructed to encode, rehearse, and, 5 sec later, compare to a single test letter. Perceptual demands were varied by presenting the subject with a cue stimulus 5 sec prior to the set, informing him of the number of letters contained therein. Several physiological measures were recorded, including HR, EOG and probe evoked potentials sampled from the intervals preceding and following the letter set, and task evoked potentials and blinks elicited by the cue, letter set, and test stimuli. Performance data, i.e., RT and error rates, were also recorded. GRA

THE SPATIAL AND TEMPORAL PARAMETERS OF VELOCITY DISCRIMINATION Annual Report, 1 Apr. - 30 Sep. 1984
S. P. MCKEE 20 Dec. 1984 8 p
(Contract AF-AFOSR-0345-82)
(AD-A158735; AFOSR-85-0572TR) Avail: NTIS HC A02/MF A01 CSCL 06P

The target duration required for the precise discrimination of velocity is quite short, amounting to about 100 msec for a single moving dot or line target. While stroboscopic motion is an adequate substitute for continuous motion in velocity discrimination, optimal discrimination depends on the use of a strobe rate greater than 10 Hz. Generally, human observers have difficulty detecting acceleration in moving targets. Over small distances (0.5 to 1 deg), timing signals from adjacent targets presented in a sequence are pooled, so that information about their relative onset time is lost. For example, given three adjacent lines, separated spatially by 0.1 deg and presented in a sequence (apparent motion) observers are unable to discriminate between a sequence in which a 10 msec interval separates the second from the reverse order (30 msec followed by 10 msec). Velocity discrimination is not affected by blur. Sinusoidal grating targets of 3 cycles per degree or lower produce excellent discrimination. Sinusoidal gratings above 3 cycles per degree in spatial frequency are not adequate for fast velocities (> 1 deg/sec). GRA

We review a program of research designed to understand the event-related brain potential (ERP) so that it can be used as a tool in the study of cognitive function and in the assessment of man-machine systems. We have conducted a series of studies on the functional significance of ERPs and have demonstrated that the P300 component is related to memory processes. We have used measures of the same component to evaluate workload, to time mental processes, to study the reciprocity of processing resources, and to extend theories of human information processing. We have also made technical advances in the analysis of the distribution of electrical potentials across the scalp. GRA

ASPECTS OF OPERATOR INTERFACE DESIGN FOR AN AUTOMATIC TRACKING ANTENNA CONTROLLER
K. E. DEBRUNNER (Dyn-Opus, Inc., Simi Valley, CA) IN: ITC/USA/'84; Proceedings of the International Telemetering Conference, Las Vegas, NV, October 22-25, 1984 . Research Triangle Park, NC, Instrument Society of America, 1984, p. 315-326.

Features of the operator interface and automation of the ACU-6 Antenna Controller are described. Consideration was given to the man-machine interface as a first step, followed by the hardwiring behind the control panel. The human-factors approach accounted

for the panel ergonomics, the antenna control requirements, and the breakdown or combination of individual information displays and control input devices. The use of color was maximized and the degree of clutter was minimized, the latter partially by grouping related functions in horizontal rows for ease of learning and use. Attention and fatigue is aided by color, flash sequences and timing and multifunction switches. The software logic interface was made error-tolerant to offset inputs which conflict with operational functions. M.S.K.

HUMAN FACTORS IN AVIATION. III - SOME COMTEMPORARY ISSUES
E. EDWARDS Aerospace (UK) (ISSN 0305-0831), vol. 12, Oct. 1985, p. 14-19. refs

The balance between human and mechanical factors in aviation is studied. On the flight deck the tasks allocated to machines include flight guidance, changes in power settings, and routine communication functions. The crew is responsible for overall system management because of the human capabilities of strategic decision making. The training of the pilots, in order for them to be able to operate the modern equipment and to have basic control of the aircraft using simple techniques, is discussed. Advanced electronic devices which display information such as CRT, EL, LED, and LCD, and the creation of alphanumeric symbols using various character fonts such as dots, 7-bar characters, and 16-segment bars are described. The importance of luminance, contrast ratio, resolution, color, viewing distance, view angle, and lighting levels in improving legibility of the displayed data is analyzed. The need for continuing the study of aviation ergonomics is discussed. I.F.

INTERMEDIATE COLLIMATION: DESCRIPTION - GOALS - FIRST RESULTS [LA COLLIMATION INTERMEDIAIRE: DESCRIPTION - BUTS - PREMIERS RESULTATS]
J.-P. MENU, J.-M. SEIGNEUR, D. BATEJAT, S. PREDELLA, and B. BARRAULT (Centre d'Etudes et de Recherches de Medecine Aerospatiale, Laboratoire Central de Biologie Aerospatiale, Paris, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 158-161. In French.

Intermediate collimation refers to placing an image between 60 cm and infinity in the field of vision. For pilots, the image is projected beyond the HUD, and thereby at a position of fixed collimation. Vision is then fixed at infinity most of the time. The adaptation times for vision between the HUD and head-down displays and between the HUD and the exterior view are then significant. Accommodation is controlled by the action of the Zinn zonules in deforming the lens of the eye to place the image on the retina. The accommodation times can only be measured indirectly in terms of reaction times after switching views. When six subjects were given tasks which depended on view changes among infinite, 4 m and 1 m foci, an interaction was detected between accommodation and convergence. However, in order to be applicable to pilots, further tests are necessary which include the symbology of displays. M.S.K.

A86-13571
THERMAL STRESS IMPOSED ON PILOTS BY NBC PROTECTIVE CLOTHING [CONTRAINTE THERMIQUE IMPOSEE AU PERSONNEL NAVIGANT PAR LA PROTECTION N.B.C.]
C. BOUTELIER and M. LONCLE (Centre d'Essais en Vol, Bretigny-sur-Orge, France) Medecine Aeronautique et Spatiale, vol. 24, 3rd Quarter, 1985, p. 161-168. In French. refs

The results of experimental determinations of the effects of thermal stress imposed on pilots by NBC clothing and anti-g suits are reported. The NBC cowling provides protection from chemical weapons, is made of neoprene, and has an air supply, but is water vapor resistant. Subjects donned the NBC suits and anti-g equipment and were then strapped in a helicopter seat in a controlled environment. Cutaneous temperatures and heart rates were monitored during the 1-hr sessions at temperatures from 20-40 C. Moderate heating in the chamber was sufficient to induce severe thermal stresses on the subjects. The results imply a necessity exists for limiting flight duration in warm weather climates or seasons, particularly at low altitudes, if pilots wear the protective gear. The situation might be helped if the suits were actively cooled. M.S.K.

COLD WATER IMMERSION TEST OF PROTOTYPE ANTI-EXPOSURE SUITS FOR AIRCREWS
K. TAGAMI (Tsukuba, University, Sakura, Japan), K. SHIMIZU, and W. OGAWA Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, June 1985, p. 49-66. In Japanese, with abstract in English. refs

Different designs of flame resistant and vapor permeable anti-exposure suits were produced and tested in cold water using five male subjects and several thermal manikins. Each human subject was immersed in cold water (about O C) for a period of 60 minutes and rectal and skin temperatures were measured every minute. Measurements of the heat loss in the human subjects were compared with the heat losses of the thermal manikins. It is found that; (1) the rectal temperature of the human subjects showed a very slight decrease (0.4 C maximum) during the 60-minute exposure; (2) a double layered suit design had the highest protection level and (3), the measurements of heat loss in the thermal manikins were in agreement with the heat loss mesurements in the human subjects. The specific materials used in the construction of the suits are listed in a table. I.H.

COMPATIBLE ATMOSPHERES FOR A SPACE SUIT, SPACE STATION, AND SHUTTLE BASED ON PHYSIOLOGICAL PRINCIPLES
B. A. HILLS (Texas, University, Houston) Aviation, Space and Environmental Medicine (ISSN 0095-6562), vol. 56, Nov. 1985, p. 1052-1058. refs
(Contract NAG9-23)

Fundamental physiological principles have been invoked to design compatible environments for a space suit, Space Station and the spacecraft used to transport the astronauts from earth. These principles include the long-term memory of tissues for a bubble-provoking decompression, the intermittent nature of blood flow in the tight connective tissue(s) responsible for the bends whose incidence in aviators has been shown to be related to bubble volume by the Weibull distribution. In the overall design an astronaut breathing a mixture of 30 percent O2 in N2 for 4-5 h in a spacecraft at 11.9 psia can transfer to a Space Station filled with the same mix at 8.7 psia and, after a further 4-5 h, go EVA at any time without any oxygen prebreathing at any stage. The probable incidence of decompression sickness has been estimated as less than 0.5 percent using the present suit operating at 4.3 psia but the risk could be reduced to zero if the suit pressure were increased to 6.5 psia. (IAF PAPER 85-304)

Attention is given to the mission requirements and performance capabilities of ESA's Hermes orbiter Environmental Control and Life Support System (ECLSS), which must furnish a 'shirtsleeve' environment for crews. System design has entailed fundamental consideration of physiological oxygen delivery requirements and CO2 concentration limits, temperature and humidity tolerance, and maximum allowable concentration of contaminants. An 'open loop' system accomplishing CO2 reduction in a Sabatier reactor and oxygen generation by electrolysis is presented, together with air and humidity management features, in schematic form. O.C.

BASIC CONSIDERATION ON CELSS
K. NITTA (National Aerospace Laboratory, Tokyo, Japan), M. YAMASHITA (Tokyo University, Japan), and H. MATSUMIYA (Bio-System International, Tokyo, Japan) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 7 p.
(IAF PAPER 85-307)

The Controlled Ecological Life Support System (CELSS) is a Japanese research effort connected with the design of the NASA Space Station's Japanese Experiment Module. The definition of CELSS technology calls for interdisciplinary research embracing agricultural, chemical, and spacecraft systems engineering. A comprehensive account is presently given of the complex interactions to be found in photosynthetic processes, wet oxidation, and the relations between higher plant, algae, and animal components of the CELSS. O.C.

ARTIFICIAL CLOSED ECOSYSTEM 'MAN-PLANTS' WITH A FULL REGENERATION OF ATMOSPHERE, WATER AND RATION VEGETABLE PART
B. G. KOVROV, I. A. TERSKOV, I. I. GITELSON, G. M. LISOVSKI, I. M. PANKOVA (AN SSSR, Institut Biofiziki, Krasnoyarsk, USSR) et al. IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 4 p.
(IAF PAPER 85-308)

A configuration and performance evaluation is made of a closed manned spacecraft ecosystem using vegetable cultivation as the basis of oxygen and pure water regeneration from the crew's waste air and water. Wheat, peas, beets, onions, cucumbers, tomatoes and potatoes are grown hydroponically on an expanded clay substrate, using round-the-clock artificial illumination. Systems of this type are intended for long duration space travel. O.C.

ENSURING SPACE STATION HUMAN PRODUCTIVITY
K. H. MILLER (Boeing Aerospace Co., Seattle, WA) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 8 p. refs
(IAF PAPER 85-500)

The 'human productivity' aspect of the current NASA Space Station Program is discussed. The early development of the concept is reviewed, and its implications are considered. The approach and results of a recently completed study on human productivity are addressed. The elements that affect productivity are identified, and management plans to deal with them, including crew compcsition and organization, individual autonomy and privacy, and physical amenities of the station, are briefly addressed. CRITERIA FOR A STATE-OF-THE-ART VISION TEST SYSTEM Final Report
K. MOFFITT and L. V. GENCO May 1985 109 p
(Contract F33615-82-C-0511)
(AD-A157099; AFAMRL-TR-85-004) Avail: NTIS HC A06/MF A01 CSCL 06P

Many vision test/screening devices used in the Armed Services have not changed since the 1940's. The reduction in the size of the pool of qualified aircrew candidates has caused operational Commands to question the validity of these tests. Current objectives of vision testing have evolved from a means to eliminate pilot candidates to methods of predicting aircrew performance. The Naval Aerospace Medical Research Laboratory (NAMRL) is attempting to correlate the results of several vision tests with the visual abilities of pilot trainees as demonstrated during monitored training flights. This report describes status that could be considered as useful parameters for testing in the Armed Forces vision test battery of the future. One major conclusion is that the operational visual task(s) must be suitably described in order to select appropriate clinical and laboratory test measures. Correlations and validation studies can then be performed with cooperative efforts such as those between NAMRL and AFAMRL. GRA

LOW TEMPERATURE INFLATOR APPARATUS Patent Application
J. J. ESPOSITO, inventor (to Navy) 2 May 1985 9 p
(AD-D011810; US-PATENT-APPL-SN-729725) Avail: NTIS HC A02/MF A01 CSCL 06G

This invention relates to inflator apparatus for inflating emergency flotation gear such as life rafts and life jackets; and more particularly to an inflator for flotation gear which may be stored at, and operated in, extremely low temperatures. Liquid CO2 (carbon dioxide) cartridges have been used for many years as the main source of pressurized gas for inflating various types of inflatable life saving devices such as rafts, vests, and jackets. Emergency use of these devices by downed aircrewman has occurred mostly in temperate zones. However, these situations now occur more frequently in the arctic region where temperatures below -20 F are not uncommon. At these low temperatures, liquid CO2 changes too slowly to the gaseous phase to provide immediate buoyancy. A rapid change is especially needed in a life raft to enable a downed person in frigid water to board as soon as possible. The longer he or she remains exposed to the cold water awaiting the formation of a boardable raft, the more likely hypothermia will set in. Raft inflation time in excess of five minutes has been observed when CO2 cartridges were stored in an aircraft at sub-zero temperatures and then activated in water at 32 F. Consequently, lives have been needlessly lost. In lieu of liquid CO2 cartridges, solid pyrotechnic inflators have been tried which generate gas from a compacted solid material, but the gas of combustion does not attain the pressure level needed for buoyancy of inflatable gear. GRA

POWER AND SIGNAL TRANSMISSION FOR MOBILE TELEOPERATED SYSTEMS
A. C. MORRIS, JR. and W. R. HAMEL 1985 31 p Presented at the Japan/US Spec. Meeting on Remote Systems Technol., Oak Ridge, Tenn., 26 Apr. 1985
(Contract DE-AC05-84OR-21400)
(DE85-013994; CONF-8504132-1) Avail: NTIS HC A03/MF A01

Appropriate means must be furnished for supplying power and for sending controlling commands to mobile teleoperated systems. Because a sizable number of possibilities are available for such applications, methods used in designing both the power and communications systems built into mobile vehicles that serve in radiological emergencies must be carefully selected. This paper describes a number of umbilical, onboard, and wireless systems used in transmitting power that are available for mobile teleoperator services. The pros and cons of selecting appropriate methods

from a list of possible communication systems are also examined. Moreover, hybrid systems combining wireless power transmissions with command-information signals are also possible. DOE

FUTURE DIRECTIONS IN MOBILE TELEOPERATION
W. R. HAMEL 1985 22 p Presented at the Workshop on Requirements of Mobile Teleoperators for Radiol. Emergency Response and Recovery, Dallas, 23 Jun. 1985
(Contract DE-AC05-84OR-21400)
(DE85-014308; CONF-8506148-3) Avail: NTIS HC A02/MF A01

Mobile teleoperator systems are the subject of an increasing amount of research and development. This work is motivated by general problems of remote operations in hazardous environments, some of which are very similar to the challenges of radiological emergency response and recovery. Current work appears to fall into two broad economic classes, one in the $100 K range and the other in the $1000 K range. Both are believed to be important for technology development and deployment. Recent developments confirm that we are at the technical doorstep of next-generation mobile systems which integrate dexterous manipulation, high mobility, and telerobotic operation. DOE

DEVELOPMENT OF A CARBON FORMATION REACTOR FOR CARBON DIOXIDE REDUCTION Final Report
G. NOYES Sep. 1985 92 p refs
(Contract NAS9-16956)
(NASA-CR-171907; NAS 1.26:171907; SVHSER-9811) Avail: NTIS HC A05/MF A01 CSCL 06K

Applied research, engineering development, and performance evaluation were conducted on a process for formation of dense carbon by pyrolysis of methane. Experimental research showed that dense (0.7 to 1.6 g/cc bulk density and 1.6 to 2.2 g/cc solid density) carbon can be produced by methane pyrolysis in quartzwool-packed quartz tubes at temperatrues of 1100 to 1300 C. This result supports the condensation theory of pyrolytic carbon formation from gaseous hydrocarbons. A full-scale Breadboard Carbon Formation Reactor (CFR) was designed, fabricated, and tested at 1100 to 1200 C with 380 to 2280 sccm input flows of methane. Single-pass conversion of methane to carbon ranged from 60 to 100 percent, with 89 percent average conversion. Performance was projected for an Advanced Carbon Reactor Subsystem (ACRS) which indicated that the ACRS is a viable option for management of metabolic carbon on long-duration space missions. Author

MASS LOSS OF SHUTTLE SPACE SUIT ORTHOFABRIC UNDER SIMULATED IONOSPHERIC ATOMIC OXYGEN BOMBARDMENT
W. L. MILLER Nov. 1985 14 p refs
(NASA-TM-87149; E-2777; NAS 1.15:87149) Avail: NTIS HC A02/MF A01 CSCL 06K

Many polymeric materials used for thermal protection and insulation on spacecraft degrade significantly under prolonged bombardment by ionospheric atomic oxygen. The covering fabric of the multilayered shuttle space suit is composed of a loose weave of GORE-TEX fibers, Nomex and Kevlar-29, which are all polymeric materials. The complete evaluation of suit fabric degradation from ionospheric atomic oxygen is of importance in reevaluating suit lifetime and inspection procedures. The mass loss and visible physical changes of each test sample was determined. Kapton control samples and data from previous asher and flight tests were used to scale the results to reflect ionospheric conditions at about 220 km altitude. It is predicted that the orthofabric loses mass in the ionosphere at a rate of about 66% of the original orthofabric mass/yr. The outer layer of the two-layer orthofabric test samples shows few easily visible signs of degradation, even when observed at 440X. It is concluded that the orthofabric could suffer significant loss of performance after much less than a year of total exposure time, while the degradation might be undetectable in post flight visual examinations of space suits. E.A.K.

HUMAN FACTORS IN SPACE STATION ARCHITECTURE 1: SPACE STATION PROGRAM IMPLICATIONS FOR HUMAN FACTORS RESEARCH
M. M. COHEN Oct. 1985 13 p refs
(NASA-TM-86702; REPT-85167; NAS 1.15:86702) Avail: NTIS HC A02/MF A01 CSCL 05H

The space station program is based on a set of premises on mission requirements and the operational capabilities of the space shuttle. These premises will influence the human behavioral factors and conditions on board the space station. These include: launch in the STS Orbiter payload bay, orbital characteristics, power supply, microgravity environment, autonomy from the ground, crew make-up and organization, distributed command control, safety, and logistics resupply. The most immediate design impacts of these premises will be upon the architectural organization and internal environment of the space station. E.A.K.

INFORMATION REQUIREMENTS DETERMINATION: AN EMPIRICAL INVESTIGATION OF OBSTACLES WITHIN AN INDIVIDUAL Ph.D. Thesis
J. R. VALUSEK 1985 201 p
(AD-A158025; AFIT/CI/NR-85-73D) Avail: NTIS HC A10/MF A01 CSCL 05H

This research has suggested that the requirements process be divided into two phases: IRD and IRA. There appears to be sufficient evidence to warrant additional investigation of the IRD phase using the model of inconsistency portrayed in this effort. Inconsistency appears to be a matter of perspective. From an analyst's point of view, the variation in users' needs constitutes inconsistency. From a user's point of view, the variation may be a fact of life resulting from perceptions of need that arise from a dynamic environment. This research is an initial attempt to document the requirements process from a user's perspective and to provide the user some external assistance to attempt to reduce the variation in perceptions of needs. It may be that the perceptions of needs always constitute a requirement from the individual's perspective and that the sorting of requirements from wishes must remain the responsibility of the referee. Perhaps tools oriented to both those roles: That of the user and that of the referee, are necessary. The requirements formulation scratchpad (RFS), as a prototype tool to help the user in the problem formulation phase of information requirements determination, was too complex for the research environment of this study. Based on suggestions from this initial investigation, the second generation of the RFS will be much simpler in design. GRA

ALERTED MONITORS: HUMAN OPERATORS AIDED BY AUTOMATED DETECTORS Final Report
R. D. SORKIN and D. E. ROBINSON Dec. 1984 55 p
(Contract DTRS56-83-C-00047)
(PB85-222750; DOT/OST/P34-85/021) Avail: NTIS HC A04/MF A01 CSCL 05H

In an alerted monitor system, an automated detector assists a human operator in the detection and diagnosis of problems occurring in some monitored process. Air traffic control centers and the flight decks of commercial aircraft include many examples of such systems. This project developed a general model of the altered-monitor system and evaluated the effects on system performance of interactions between the human operator and automated detector. One of the types of interaction evaluated (contingent criterion strategy) yields optimal performance from the combined person-machine system. Two laboratory experiments were performed to evaluate the assumptions of the model and the interactions between the operator and automated components. GRA

SOLID WASTE TREATMENT PROCESSES FOR SPACE STATION Final Report
T. R. MARRERO *In* NASA. Johnson (Lyndon B.) Space Center The 1983 NASA/ASEE Summer Faculty Fellowship Research Program Research Reports 55 p Sep. 1983 refs
Avail: NTIS HC A18/MF A01 CSCL 06K

The purpose of this study was to evaluate the state-of-the-art of solid waste(s) treatment processes applicable to a Space Station. From the review of available information a source term model for solid wastes was determined. An overall system is proposed to treat solid wastes under constraints of zero-gravity and zero-leakage. This study contains discussion of more promising potential treatment processes, including supercritical water oxidation, wet air (oxygen) oxidation, and chemical oxidation. A low pressure, batch-type treament process is recommended. Processes needed for pretreatment and post-treatment are hardware already developed for space operations. The overall solid waste management system should minimize transfer of wastes from their collection point to treatment vessel. Author

A POSSIBLE ENERGETIC ROLE OF MINERAL SURFACES IN CHEMICAL EVOLUTION
L. M. COYNE (San Jose State University, Moffett Field, CA) Origins of Life (ISSN 0302-1688), vol. 15, no. 3, 1985, p. 161-206. refs

The role of the interaction of mineral surfaces (MSs) with such sources of energy (E) as ionizing radiation and mechanical stress in chemical evolution and the origin of life is discussed. The effect of MS-E interaction in terms of spectroscopic properties of minerals, catalysis, and interactions of E with condensed phases are considered, as well as some commonly accepted and novel means by which the MS activity may be enhanced by E inputs. The contribution of natural radioactive decay and triboelectric E is assessed, and is proposed to be potentially competitive with solar energy for systems of heterogeneous reactions. Studies of clays are presented that demonstrate novel luminescence properties, indicating energy storage and transfer processes in the MSs, which are interpreted so as to provide a basis for estimating the potential significance of MS-E interactions for driving clay surface chemistry. FACT AND ASSUMPTION IN STUDIES ON THE ORIGINS OF LIFE
N. W. PIRIE Origins of Life (ISSN 0302-1688), vol. 15, no. 3, 1985, p. 207-212. refs

The prevailing tendency in the current theories of the origins of life to assume the absolute necessity of preexisting proteins, nucleic acids, and other biochemical molecules for the process of biopoesis is critically assessed. It is suggested that the events which might take place in the course of few million years on moist mineral surfaces smeared with bituminous material and exposed to prebiotic physical and chemical environment should be considered for experiments on the origins of life. In such a system, transition elements, the orienting ability of silicates and other mineral crystals, the small molecules generated by light, and the reactive centers generated on sunlit oil and tar should be taken into account. I.S.

SUBMARINE HYDROTHERMAL VENTS AND ASSOCIATED GRADIENT ENVIRONMENTS AS SITES FOR THE ORIGIN AND EVOLUTION OF LIFE
J. A. BAROSS (Washington, University, Seattle) and S. E. HOFFMAN (Oregon State University, Corvallis) Origins of Life (ISSN 0302-1688), vol. 15, no. 4, 1985, p. 327-345. refs
(Contract N00014-79-C-004; NSF DEB-81-11307; NSF DPP-81-20473)

The hypothesis of the submarine hydrothermal environment providing the conditions for abiotic synthesis of organic compounds, macromolecules, and precells, leading to the evolution of living organisms is proposed. The geological, chemical, and biological changes in the Archean ocean and atmosphere are studied and compared with the characteristics of a present-day hydrothermal environment. The geological and geochemical features of the hydrothermal circulation system, which provides the energy for converting inorganic precursors to organic compounds, are discussed. The hot vents and cool Galopagos-type vents that result from large and small fractures are described. The changes which have produced differences in the Archean and present-day oceanic environments are analyzed. Examples of bacteria which support vent communities are presented. The influence of temperature and O2 gradient on the evolution of the ecosystem is investigated. A comparison of present-day volcanic environments to ancient microbial habitats based on fossil records is provided. I.F.

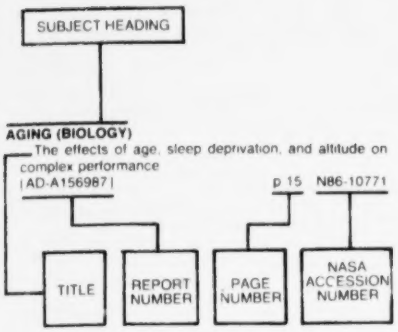
THE EVOLUTION OF COMPLEX LIFE
J. BILLINGHAM (NASA, Ames Research Center, Moffett Field, CA) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 15 p. refs
(IAF PAPER 85-465)

The emergence of complex living organisms in the context of evolutionary biology, planetary environments, and space events is investigated. The application of data on biological evolution, climatology, and the chemical and physical environments of the earth's surface, to explain the development of extraterrestrial life is described and an example is provided. The possibility of extraplanetary disturbances such as, meteorite and comet bombardments, and supernova explosions, causing the elimination of preexisting life and allowing advanced life development is analyzed. The possible existence of different life cycles (genetic and reproductive strategies) on other planets is studied. The GAIA hypothesis (Lovelock, 1979) which states living things modify the global environment to their own advantage is examined. The improved identification of habitable planetary environments and the possible existence of a form of extraterrestrial intelligent life is discussed. I.F.

A86-15921#
THE ANTHROPIC PRINCIPLE - PROBABILITY AND THE POSSIBILITY OF EXTRATERRESTRIAL LIFE
P. J. HALL (Newcastle-upon-Tyne, University, England) IAF, International Astronautical Congress, 36th, Stockholm, Sweden, Oct. 7-12, 1985. 6 p. refs
(IAF PAPER 85-468)

The influence of the Anthropic Principle (AP) on conventional hypotheses for the existence of extraterrestrial life and on strategies in search for extraterrestrial life is discussed. Three relationships between local and general cosmological laws, the Copernican relationship, the Mach relationship, and the Anthropic relationship, are defined. Two assumptions, which are there must be absolute uniformity in the universe, and the degree of fine tuning varies from law to law and constant to constant, are analyzed in the study of the AP and the probability of the existence of extraterrestrial intelligence (ETI). The search for the existence of ETI, which is based on Anthropic and Copernican ideas, is described. It is hypothesized that electromagnetic beam signals are emitted by ETI for detection and interpretation by other ETI. The relationship between communication with electromagnetic beams and quantum mechanics and relativity is studied. I.F.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

[IAF PAPER 85-313] p 35 A86-15824
Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827
Development of countermeasures for use in space missions --- to adaptive response to space flight
[IAF PAPER 85-327] p 36 A86-15832
USSR Space Life Sciences Digest, Issue 2
[NASA-CR-3922(02)] p 28 N86-12949
Aerospace Medicine and Biology Continuing Bibliograph: A continuing bibliography with indexes
[NASA-SP-7011(276)] p 37 N86-12954
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879

AGRICULTURE
Artificial closed ecosystem 'man-plants' with a full regeneration of atmosphere, water and ration vegetable part
[IAF PAPER 85-308] p 45 A86-15820

AIR TRAFFIC CONTROL
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906

AIR TRAFFIC CONTROLLERS (PERSONNEL)
Blood pressure levels of active pilots compared with those of air traffic controllers p 33 A86-14318

AIRCRAFT CONFIGURATIONS
The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12968

AIRCRAFT CONTROL
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics p 44 A86-14238

AIRCRAFT DESIGN
Human factors in aviation. III - Some comtemporary issues p 44 A86-13263

ALTIMETERS
Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892

ALTITUDE ACCLIMATIZATION
Prediction of the functional state of the body during adaptation to high altitudes p 31 A86-13298
The environment and the heart --- Russian book p 25 A86-13460
Aldosterone, cortisol, and electrolyte responses to hypobaric hypoxia in moderate-altitude natives p 32 A86-14316
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523

ALTITUDE CONTROL
Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890

ALTITUDE SICKNESS
The bends at high altitude p 32 A86-13573
Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053

ALTITUDE SIMULATION
Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572

ALTITUDE TOLERANCE
Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572
Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518

AMERICIUM
Accidental exposure to americium
[DE85-012794] p 39 N86-12965

AMINO ACIDS
Study of toxic and antigenic structures of botulinum neurotoxins
[AD-A156642] p 29 N86-13880

ANTENNAS
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223

APPENDAGES
Mode of neural control mediating rat tail vasodilation during heating p 28 A86-16055

ARCTIC REGIONS
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974

ARMED FORCES (UNITED STATES)
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12968

ARTERIES
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827

ARTIFICIAL INTELLIGENCE
Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894

ASTRONAUT PERFORMANCE
Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944

ASYMMETRY
Determination of vestibular asymmetry with application to aviation medicine p 31 A86-13299

ATMOSPHERIC PRESSURE
Investigation of Eustachianal function in JASDF pilots by new apparatus. I - On the pressural regulation of the Eustachian tube in normal human p 32 A86-13941
Human hemodynamic change under high atmospheric pressure p 37 N86-12458

ATOMIC RECOMBINATION
Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13899

AUDITORY PERCEPTION
A study of the psychophysical measurement on fluctuating sound by a stochastic approximation method p 41 A86-14575

SUBJECT

AUTOMATIC CONTROL
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223
AUTOMATION
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906
AXONS
Effects of cation ions in nerve excitation
p 37 N86-12377

B

BACTERIA
Raman activity in synchronously dividing bacteria
[DE85-015672] p 28 N86-12951
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
BACTERIOLOGY
Extremely thermophilic bacteria living at temperatures above 100 C p 25 A86-13648
BAGS
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
BARORECEPTORS
Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827
BEARING (DIRECTION)
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
BEHAVIOR
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE85-011992] p 30 N86-13885
BESS (SATELLITE)
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879
BIBLIOGRAPHIES
Biomedical and Environmental Sciences Program publications 1984
[DE85-015070] p 28 N86-12953
Aerospace Medicine and Biology Continuing Bibliograph: A continuing bibliography with indexes
[NASA-SP-7011(276)] p 37 N86-12954
BIFURCATION (BIOLOGY)
Effects of cation ions in nerve excitation
p 37 N86-12377
BIOASTRONAUTICS
Physiologic adaptation to space - Space adaptation syndrome
[IAF PAPER 85-313] p 35 A86-15824
The human cardiovascular system in the absence of gravity
[IAF PAPER 85-315] p 35 A86-15825
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
BIOCHEMISTRY
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883
BIOINSTRUMENTATION
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
BIOLOGICAL EFFECTS
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952
Biomedical and Environmental Sciences Program publications 1984
[DE85-015070] p 28 N86-12953
Aerospace Medicine and Biology Continuing Bibliograph: A continuing bibliography with indexes
[NASA-SP-7011(276)] p 37 N86-12954
Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE85-011992] p 30 N86-13885
BIOLOGICAL EVOLUTION
The oldest traces of life (according to papers presented at the 27th session of the International Geological Congress) p 47 A86-13974
Fact and assumption in studies on the origins of life
p 48 A86-14115
Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast
p 25 A86-14119
Submarine hydrothermal vents and associated gradient environments as sites for the origin and evolution of life
p 48 A86-14123
The evolution of complex life
[IAF PAPER 85-465] p 48 A86-15919
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879
BIOLOGICAL MODELS (MATHEMATICS)
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
BIOMEDICAL DATA
Biomedical and Environmental Sciences Program publications 1984
[DE85-015070] p 28 N86-12953
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879
BIOMETRICS
Investigation of Eustachianal function in JASDF pilots by new apparatus. I - On the pressural regulation of the Eustachian tube in normal human p 32 A86-13941
BIOPHYSICS
Biophysical basis of the two-component analysis of biosignals of the pulsed filling of the blood vessels
p 34 A86-15517
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524
BIOSPHERE
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879
BLOCKING
Complete right branch blocking and the flight fitness of pilots p 31 A86-13567
BLOOD
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
BLOOD CIRCULATION
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
The effect of spironolactone on the cardiocirculatory responses to upright tilt at sea level and at simulated high altitude
[AD-A157734] p 39 N86-13887
BLOOD FLOW
Unsteady blood flow in humans under artificial conditions --- Russian book p 33 A86-15443
Biophysical basis of the two-component analysis of biosignals of the pulsed filling of the blood vessels
p 34 A86-15517
BLOOD PLASMA
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-16052
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956
BLOOD PRESSURE
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
Blood pressure levels of active pilots compared with those of air traffic controllers p 33 A86-14318
Human hemodynamic change under high atmospheric pressure p 37 N86-12458
BLOOD VOLUME
Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956
BODY FLUIDS
Dermal substance collection device
[AD-D011848] p 38 N86-12962
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
BODY TEMPERATURE
Thermal stress imposed on pilots by NBC protective clothing --- Nuclear-Biological-Chemical
p 44 A86-13571
BODY WEIGHT
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
BRAIN
Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
BUOYANCY
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974

C

CARBOHYDRATE METABOLISM
Muscle metabolism during exercise in the heat in unacclimatized and acclimatized humans
p 36 A86-16051
CARBON
Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898
CARBON DIOXIDE
Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898
CARBON DIOXIDE CONCENTRATION
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
CARBON ISOTOPES
Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast
p 25 A86-14119
CARBON MONOXIDE
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
CARDIAC VENTRICLES
Complete right branch blocking and the flight fitness of pilots p 31 A86-13567
CARDIOLOGY
The environment and the heart --- Russian book
p 25 A86-13460
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine
p 32 A86-14317
Unsteady blood flow in humans under artificial conditions --- Russian book p 33 A86-15443
CARDIOVASCULAR SYSTEM
The human cardiovascular system in the absence of gravity
[IAF PAPER 85-315] p 35 A86-15825
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
The effect of spironolactone on the cardiocirculatory responses to upright tilt at sea level and at simulated high altitude
[AD-A157734] p 39 N86-13887
CAROTID SINUS BODY
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
CARTRIDGES
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
CASE HISTORIES
Mourning and traumatic neuroses - Clinical aspects and aeronautical incidents for one helicopter pilot
p 40 A86-13569
CATECHOLAMINE
Comparative analysis of corticosteroid and catecholamine levels excreted in urine of persons with different occupations p 34 A86-15520
CATIONS
Effects of cation ions in nerve excitation
p 37 N86-12377
CAVITIES
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
CELL DIVISION
Raman activity in synchronously dividing bacteria
[DE85-015672] p 28 N86-12951
CELLS (BIOLOGY)
Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474

New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881

CEMENTS
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966

CEREBRAL CORTEX
Encoding of spatial location by posterior parietal neurons p 27 A86-14714
Electroencephalograms and the read-out of information in the visual cortex during image recognition p 33 A86-15512
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

CHEMICAL ANALYSIS
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883

CHEMICAL COMPOSITION
Dermal substance collection device
[AD-D011848] p 38 N86-12962
Molecular mechanisms of mutagenesis determined by the recombinant DNA technology
[DE85-016353] p 30 N86-13884

CHEMICAL ENGINEERING
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966

CHEMICAL EVOLUTION
A possible energetic role of mineral surfaces in chemical evolution p 48 A86-14114
Fact and assumption in studies on the origins of life p 48 A86-14115
Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis p 25 A86-14117
A note on self-replicating information yielding the chemical origin of life p 48 A86-14774

CHOLINE
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

CIRCADIAN RHYTHMS
Types of work capacity and the frequency of the development of ischemic heart disease and hypertonic disease p 34 A86-15516
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952

CLINICAL MEDICINE
Unsteady blood flow in humans under artificial conditions --- Russian book p 33 A86-15443
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515
Protection of eyes against laser damage studied p 39 N86-12967
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973

CLOSED ECOLOGICAL SYSTEMS
Basic consideration on CELSS
[IAF PAPER 85-307] p 45 A86-15819
Artificial closed ecosystem 'man-plants' with a full regeneration of atmosphere, water and ration vegetable part
[IAF PAPER 85-308] p 45 A86-15820
Comparative effect of lunar fines and terrestrtrial ash on the growth of a blue-green alga and germinating radish seeds p 30 N86-14097
Biological life-support systems for long-duration space flights p 47 N86-14160

COGNITION
Human cognition and performance
[AD-A157665] p 42 N86-12970
Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972
A psychophysiological mapping of cognitive processes
[AD-A158732] p 43 N86-13895
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901

COLD ACCLIMATIZATION
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523

COLD WATER
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974

COLD WEATHER
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974

COLLECTION
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
Dermal substance collection device
[AD-D011848] p 38 N86-12962

COLLIMATION
Intermediate collimation: Description - Goals - First results p 44 A86-13570

COLOR VISION
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973

COMPATIBILITY
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles p 44 A86-14311

COMPUTER PROGRAMS
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969

COMPUTER TECHNIQUES
Human hemodynamic change under high atmospheric pressure p 37 N86-12458

COMPUTERIZED SIMULATION
Encoding of spatial location by posterior parietal neurons p 27 A86-14714
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888

CONSTRUCTION INDUSTRY
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966

CONTACT LENSES
The effects of hypoxia induced by low atmospheric pressure on soft contact lens wear
[AD-A158556] p 38 N86-12963

CONTAMINATION
Accidental exposure to americium
[DE85-012794] p 39 N86-12965

CONTRAST
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889

CONTROL
Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976

CONTROL SIMULATION
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics p 44 A86-14238

CONTROL SYSTEMS DESIGN
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223

CONTROLLED ATMOSPHERES
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles p 44 A86-14311

CONTROLLERS
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223

CORONARY CIRCULATION
Types of work capacity and the frequency of the development of ischemic heart disease and hypertonic disease p 34 A86-15516

CORTICOSTEROIDS
Comparative analysis of corticosteroid and catecholamine levels excreted in urine of persons with different occupations p 34 A86-15520
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883

COSMOLOGY
The anthropic principle - Probability and the possibility of extraterrestrial life
[IAF PAPER 85-468] p 48 A86-15921

CROPS
Artificial closed ecosystem 'man-plants' with a full regeneration of atmosphere, water and ration vegetable part
[IAF PAPER 85-308] p 45 A86-15820

CYTOLOGY
Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474
Red blood cell decreases of microgravity
[IAF PAPER 85-324] p 36 A86-15829

D

DATA PROCESSING
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897

DATA TRANSMISSION
Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975

DEATH
Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474

DECISION MAKING
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906

DECOMPRESSION SICKNESS
The bends at high altitude p 32 A86-13573
Decompression outcome following saturation dives with multiple inert gases in rats p 28 A86-16054

DECONTAMINATION
Accidental exposure to americium
[DE85-012794] p 39 N86-12965

DEGRADATION
Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13899

DEHYDRATION
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-16052

DENSITY (MASS/VOLUME)
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956

DEOXYRIBONUCLEIC ACID
Molecular mechanisms of mutagenesis determined by the recombinant DNA technology
[DE85-016353] p 30 N86-13884

DETECTION
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889

DIFFRACTION PATTERNS
Small X-ray diffraction of immunoglobulin-membrane complexes
[AD-A158252] p 29 N86-13882

DIGITAL NAVIGATION
Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892

DIGITALIS
Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892

DIRECT CURRENT
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883

DISTRIBUTED PROCESSING
Human cognition and performance
[AD-A157665] p 42 N86-12970

DIURETICS
The effect of spironolactone on the cardiocirculatory responses to upright tilt at sea level and at simulated high altitude
[AD-A157734] p 39 N86-13887

DOSIMETERS
A handbook of radiation dosimetry and hygiene --- Russian book p 25 A86-13457

DRUGS
Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518

E

EARTH (PLANET)
Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis p 25 A86-14117

EARTH ORBITAL ENVIRONMENTS
Utilization of space stations in the field of life sciences
[IAF PAPER 85-51] p 35 A86-15637

ECOSYSTEMS
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
Interaction between Escherichia coli and lunar fines p 30 N86-14088

EDUCATION
The helicopter to fixed wing conversion program. A critical review
[AD-A156820] p 42 N86-12968

ELECTRIC FIELDS
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE85-011992] p 30 N86-13885
ELECTRIC STIMULI
The use of reflex therapy in the prophylaxis and treatment of motion sickness p 31 A86-13300
Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595
ELECTROENCEPHALOGRAPHY
Electroencephalograms and the read-out of information in the visual cortex during image recognition p 33 A86-15512
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
ELECTROLYTE METABOLISM
Aldosterone, cortisol, and electrolyte responses to hypobaric hypoxia in moderate-altitude natives p 32 A86-14316
ELECTROLYTES
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
ELECTRON MICROSCOPY
The scanning electron microscope as a tool in space biology p 30 N86-14080
ELECTROPHORESIS
Molecular mechanisms of mutagenesis determined by the recombinant DNA technology
[DE85-016353] p 30 N86-13884
EMERGENCY BREATHING TECHNIQUES
Positive pressure respiration, a means of protecting against +Gz accelerations - A theoretical approach p 31 A86-13568
ENCLOSURE
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883
ENDOCRINE GLANDS
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
ENERGY CONSUMPTION
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
ENERGY TRANSFER
Energy exchange of plants under weightlessness conditions p 30 N86-14162
ENVIRONMENTAL MONITORING
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
ENVIRONMENTAL SURVEYS
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
ENZYME ACTIVITY
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
EPIDEMIOLOGY
Studies of participants in nuclear tests p 38 N86-12964
ERYTHROCYTES
Red blood cell decreases of microgravity
[IAF PAPER 85-324] p 36 A86-15829
The scanning electron microscope as a tool in space biology p 30 N86-14080
ESCHERICHIA
Interaction between Escherichia coli and lunar fines p 30 N86-14088
ESTIMATES
A new hazard function estimator of performance time
[AD-A157843] p 42 N86-12971
EUROPEAN SPACE PROGRAMS
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15317
EUSTACHIAN TUBES
Investigation of Eustachianal function in JASDF pilots by new apparatus. I - On the pressural regulation of the Eustachian tube in normal human p 32 A86-13941
EVENTS
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
EXCRETION
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
EXERCISE PHYSIOLOGY
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine p 32 A86-14317
Muscle metabolism during exercise in the heat in unacclimatized and acclimatized humans p 36 A86-16051
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-16052
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
EXOBIOLOGY
Utilization of space stations in the field of life sciences
[IAF PAPER 85-51] p 35 A86-15637
Aerospace Medicine and Biology Continuing Bibliograph: A continuing bibliography with indexes
[NASA-SP-7011(276)] p 37 N86-12954
The scanning electron microscope as a tool in space biology p 30 N86-14080
EXPOSURE
Accidental exposure to americium
[DE85-012794] p 39 N86-12965
EXTRATERRESTRIAL INTELLIGENCE
The anthropic principle - Probability and the possibility of extraterrestrial life
[IAF PAPER 85-466] p 48 A86-15921
EXTRATERRESTRIAL LIFE
The evolution of complex life
[IAF PAPER 85-465] p 48 A86-15919
The anthropic principle - Probability and the possibility of extraterrestrial life
[IAF PAPER 85-466] p 48 A86-15921
EYE (ANATOMY)
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961
Protection of eyes against laser damage studied p 39 N86-12967
EYE DOMINANCE
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961
EYE MOVEMENTS
The perception of motion during colinear eye movements p 41 A86-14143
EYE PROTECTION
Protection of eyes against laser damage studied p 39 N86-12967

F

FALLOUT
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888
FIBER OPTICS
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
FINGERS
Suture needle holder
[AD-D011764] p 37 N86-12958
FIXED WINGS
The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12966
FLIGHT CREWS
Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
FLIGHT FITNESS
Complete right branch blocking and the flight fitness of pilots p 31 A86-13567
FLIGHT PATHS
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888
FLIGHT SIMULATORS
Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822
FLIGHT TRAINING
Psychological states of student pilots in flight training p 41 A86-13943
FLOTATION
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
FOSSILS
Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast p 25 A86-14119

G

GAMMA RAYS
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888
GAS ANALYSIS
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
GAS COMPOSITION
Pulmonary function in microgravity - Spacelab 4 and beyond
[IAF PAPER 85-322] p 36 A86-15828
GAS GENERATORS
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
GAS MIXTURES
Decompression outcome following saturation dives with multiple inert gases in rats p 28 A86-16054
GAS SPECTROSCOPY
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
GAS TRANSPORT
Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053
GASTROINTESTINAL SYSTEM
Tachygastria and motion sickness p 32 A86-14315
GLOBULINS
Small X-ray diffraction of immunoglobulin-membrane complexes
[AD-A158252] p 29 N86-13882
GRAVITATIONAL PHYSIOLOGY
Positive pressure respiration, a means of protecting against +Gz accelerations - A theoretical approach p 31 A86-13568
Psychomotor performance after forward-facing impact p 32 A86-14310
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822
The human cardiovascular system in the absence of gravity
[IAF PAPER 85-315] p 35 A86-15825
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827
Red blood cell decreases of microgravity
[IAF PAPER 85-324] p 36 A86-15829
GROUP DYNAMICS
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900

H

HABITABILITY
Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis p 25 A86-14117
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
HAZARDS
A new hazard function estimator of performance time
[AD-A157843] p 42 N86-12971
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
HEAD (ANATOMY)
Effects of head and body restraint on experimental motion-induced sickness in squirrel monkeys p 26 A86-14314
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897

HEALTH
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
HEART FUNCTION
The environment and the heart --- Russian book p 25 A86-13460
HEART RATE
Biophysical basis of the two-component analysis of biosignals of the pulsed filling of the blood vessels p 34 A86-15517
HEAT ACCLIMATIZATION
Heat sensitivity of the medial preoptic region of the hypothalamus during seasonal adaptation and acclimatization to high ambient temperature p 26 A86-14594
Muscle metabolism during exercise in the heat in unacclimatized and acclimatized humans p 36 A86-16051
HEAT TOLERANCE
Heat sensitivity of the medial preoptic region of the hypothalamus during seasonal adaptation and acclimatization to high ambient temperature p 26 A86-14594
HELICOPTERS
The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12968
HEMATOCRIT RATIO
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956
HEMATOLOGY
Leukocytic reactions caused by emotional stress p 34 A86-15519
Red blood cell decreases of microgravity
[IAF PAPER 85-324] p 36 A86-15829
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
HEMODYNAMIC RESPONSES
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
Hemodynamics during short-term application of lower body negative pressure p 33 A86-15514
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515
Human hemodynamic change under high atmospheric pressure p 37 N86-12458
HEMOGLOBIN
Plasma volume methodology: Evans blue, hemoglobin-hematocrit, and mass density transformations
[NASA-TM-86834] p 37 N86-12956
HERMES MANNED SPACEPLANE
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15817
HEURISTIC METHODS
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894
HIBERNATION
Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593
HIERARCHIES
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969
HIGH ALTITUDE
The bends at high altitude p 32 A86-13573
HIGH ALTITUDE BREATHING
Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518
HIGH ALTITUDE ENVIRONMENTS
The environment and the heart --- Russian book p 25 A86-13460
HIGH TEMPERATURE ENVIRONMENTS
Extremely thermophilic bacteria living at temperatures above 100 C p 25 A86-13648
Heat sensitivity of the medial preoptic region of the hypothalamus during seasonal adaptation and acclimatization to high ambient temperature p 26 A86-14594
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522
HOLDERS
Suture needle holder
[AD-D011764] p 37 N86-12958
HUMAN BEHAVIOR
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900
HUMAN FACTORS ENGINEERING
Human factors in aviation. III - Some contemporary issues p 44 A86-13263
Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906
Architect discusses space habitat designs p 47 N86-14161
HUMAN PERFORMANCE
Human cognition and performance
[AD-A157665] p 42 N86-12970
A new hazard function estimator of performance time
[AD-A157843] p 42 N86-12971
The spatial and temporal parameters of velocity discrimination
[AD-A158735] p 43 N86-13896
HUMAN REACTIONS
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
HUMAN TOLERANCES
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522
HUMAN WASTES
Solid waste treatment processes for space station p 47 N86-14091
HYGIENE
A handbook of radiation dosimetry and hygiene --- Russian book p 25 A86-13457
HYPERTENSION
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515
Types of work capacity and the frequency of the development of ischemic heart disease and hypertonic disease p 34 A86-15516
HYPERTHERMIA
Thermal stress imposed on pilots by NBC protective clothing --- Nuclear-Biological-Chemical p 44 A86-13571
Effect of exposure to heat, hypoxia, cold, acceleration, and vibration stress on the total blood sulfhydryl groups in human subjects p 33 A86-14319
Mode of neural control mediating rat tail vasodilation during heating p 28 A86-16055
HYPOBARIC ATMOSPHERES
Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572
Aldosterone, cortisol, and electrolyte responses to hypobaric hypoxia in moderate-altitude natives p 32 A86-14316
HYPODYNAMIA
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
HYPOKINESIA
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
HYPOMETABOLISM
Neurochemical basis of chemical thermoregulation and artificial hypobiosis p 27 A86-15521
HYPOTENSION
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
HYPOTHALAMUS
Heat sensitivity of the medial preoptic region of the hypothalamus during seasonal adaptation and acclimatization to high ambient temperature p 26 A86-14594
HYPOTHERMIA
Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942
Effect of exposure to heat, hypoxia, cold, acceleration, and vibration stress on the total blood sulfhydryl groups in human subjects p 33 A86-14319
Neurochemical basis of chemical thermoregulation and artificial hypobiosis p 27 A86-15521
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525
HYPOTHESES
Hypothesizing and refining causal models
[AD-A158165] p 43 N86-13893
HYPOVOLEMIA
Development of countermeasures for use in space missions --- to adaptive response to space flight
[IAF PAPER 85-327] p 36 A86-15832
HYPOXIA
Aldosterone, cortisol, and electrolyte responses to hypobaric hypoxia in moderate-altitude natives p 32 A86-14316
Effect of exposure to heat, hypoxia, cold, acceleration, and vibration stress on the total blood sulfhydryl groups in human subjects p 33 A86-14319
Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518

I

IMAGE CONTRAST
Visual-contrast measurement - Measurement of the spatial transfer functions of the visual system --- Russian book p 27 A86-15467
IMAGE PROCESSING
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894
IMAGES
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894
IMMOBILIZATION
Effects of head and body restraint on experimental motion-induced sickness in squirrel monkeys p 26 A86-14314
IMMUNOLOGY
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
Study of toxic and antigenic structures of botulinum neurotoxins
[AD-A156642] p 29 N86-13880
IMPACT ACCELERATION
Psychomotor performance after forward-facing impact p 32 A86-14310
IMPACT RESISTANCE
Psychomotor performance after forward-facing impact p 32 A86-14310
INDEXES (RATIOS)
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
INDUSTRIAL SAFETY
Accidental exposure to americium
[DE85-012794] p 39 N86-12965
INFLATABLE STRUCTURES
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
INFLATING
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
INFRARED LASERS
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
INFRARED SPECTRA
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
INFRARED SPECTROSCOPY
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
INJURIES
Accidental exposure to americium
[DE85-012794] p 39 N86-12965
INTAKE SYSTEMS
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
INTERFERON
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
IONIZING RADIATION
A possible energetic role of mineral surfaces in chemical evolution p 48 A86-14114
IONOSPHERE
Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13898
ISCHEMIA
Types of work capacity and the frequency of the development of ischemic heart disease and hypertonic disease p 34 A86-15516

JACKETS
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
JAPANESE SPACE PROGRAM
Basic consideration on CELSS
[IAF PAPER 85-307] p 45 A86-15819

L

LAGOONS
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124
LASER APPLICATIONS
A note on self-replicating information yielding the chemical origin of life p 48 A86-14774
LASER DAMAGE
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
Protection of eyes against laser damage studied
p 39 N86-12967
LEAKAGE
The effect of leakage on the insulation provided by immersion-protection clothing p 44 A86-14320
LEARNING
Human cognition and performance
[AD-A157665] p 42 N86-12970
Hypothesizing and refining causal models
[AD-A158165] p 43 N86-13893
LEARNING MACHINES
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894
LEUKEMIAS
Studies of participants in nuclear tests
p 38 N86-12964
LEUKOCYTES
Leukocytic reactions caused by emotional stress
p 34 A86-15519
LIFE RAFTS
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
LIFE SCIENCES
Extremely thermophilic bacteria living at temperatures above 100 C p 25 A86-13648
Fact and assumption in studies on the origins of life
p 48 A86-14115
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525
Utilization of space stations in the field of life sciences
[IAF PAPER 85-51] p 35 A86-15637
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
The evolution of complex life
[IAF PAPER 85-465] p 48 A86-15919
USSR Space Life Sciences Digest, Issue 2
[NASA-CR-3922(02)] p 28 N86-12949
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
Protection of eyes against laser damage studied
p 39 N86-12967
Life sciences accomplishments
[NASA-TM-88177] p 29 N86-13879
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE85-011992] p 30 N86-13885
LIFE SUPPORT SYSTEMS
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15817
Basic consideration on CELSS
[IAF PAPER 85-307] p 45 A86-15819
Artificial closed ecosystem 'man-plants' with a full regeneration of atmosphere, water and ration vegetable part
[IAF PAPER 85-308] p 45 A86-15820
LIGHT SCATTERING
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
LINGUISTICS
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523
LIQUID FUELS
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
LONG DURATION SPACE FLIGHT
Biological life-support systems for long-duration space flights p 47 N86-14160
Architect discusses space habitat designs
p 47 N86-14161
LONG TERM EFFECTS
Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959
LOWER BODY NEGATIVE PRESSURE
Hemodynamics during short-term application of lower body negative pressure p 33 A86-15514
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
LUNAR ATMOSPHERE
Interaction between Escherichia coli and lunar fines
p 30 N86-14088
LUNAR BASES
Comparative effect of lunar fines and terrestrtrial ash on the growth of a blue-green alga and germinating radish seeds p 30 N86-14097
LUNAR ENVIRONMENT
Comparative effect of lunar fines and terrestrtrial ash on the growth of a blue-green alga and germinating radish seeds p 30 N86-14097
LUNAR LOGISTICS
Comparative effect of lunar fines and terrestrtrial ash on the growth of a blue-green alga and germinating radish seeds p 30 N86-14097
LUNAR SOIL
Interaction between Escherichia coli and lunar fines
p 30 N86-14088

M

MAGNETIC FIELDS
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952
MAN ENVIRONMENT INTERACTIONS
The environment and the heart --- Russian book
p 25 A86-13460
MAN MACHINE SYSTEMS
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics
p 44 A86-14238
Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944
Human cognition and performance
[AD-A157665] p 42 N86-12970
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901
MANIPULATORS
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905
MANNED SPACE FLIGHT
Understanding metabolic alterations in space flight using quantitative models - Fluid and energy balance
[IAF PAPER 85-325] p 36 A86-15830
MANUAL CONTROL
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics
p 44 A86-14238
MARINE ENVIRONMENTS
Submarine hydrothermal vents and associated gradient environments as sites for the origin and evolution of life
p 48 A86-14123
MASS SPECTROSCOPY
New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881
MATHEMATICAL MODELS
Effects of cation ions in nerve excitation
p 37 N86-12377
MEASURING INSTRUMENTS
Investigation of Eustachianal function in JASDF pilots by new apparatus. I - On the pressural regulation of the Eustachian tube in normal human p 32 A86-13941
MEDICAL EQUIPMENT
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
Suture needle holder
[AD-D011764] p 37 N86-12958
MEDICAL SCIENCE
Studies of participants in nuclear tests
p 38 N86-12964
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
MEMORY
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
MENTAL PERFORMANCE
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine
p 32 A86-14317
Physiological reflections of mental workload
p 41 A86-14321
Leukocytic reactions caused by emotional stress
p 34 A86-15519
Comparative analysis of corticosteroid and catecholamine levels excreted in urine of persons with different occupations p 34 A86-15520
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523
The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969
Human cognition and performance
[AD-A157665] p 42 N86-12970
Hypothesizing and refining causal models
[AD-A158165] p 43 N86-13893
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897
METABOLISM
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525
Understanding metabolic alterations in space flight using quantitative models - Fluid and energy balance
[IAF PAPER 85-325] p 36 A86-15830
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
METHANE
Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898
MICE
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
MICROBIOLOGY
Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast
p 25 A86-14119
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124
Microbiological management of Spacelab 3 rodents
[AIAA PAPER 85-6090] p 26 A86-14386
MICROCOMPUTERS
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
MICROORGANISMS
The scanning electron microscope as a tool in space biology p 30 N86-14080
MICROPROCESSORS
Aspects of operator interface design for an automatic tracking antenna controller p 43 A86-13223
MINERALS
A possible energetic role of mineral surfaces in chemical evolution p 48 A86-14114
MOBILITY
Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975

Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976

MODELS
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
Hypothesizing and refining causal models
[AD-A158165] p 43 N86-13893

MOLECULAR BIOLOGY
Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474

MOLECULES
Small X-ray diffraction of immunoglobulin-membrane complexes
[AD-A158252] p 29 N86-13882

MONITORS
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906

MONOPROPELLANTS
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891

MORTALITY
Studies of participants in nuclear tests
p 38 N86-12964

MOTION PERCEPTION
The perception of motion during colinear eye movements p 41 A86-14143
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889

MOTION SICKNESS
The use of reflex therapy in the prophylaxis and treatment of motion sickness p 31 A86-13300
Effects of head and body restraint on experimental motion-induced sickness in squirrel monkeys
p 26 A86-14314
Tachygastria and motion sickness p 32 A86-14315
Space motion sickness preflight adaptation training Proliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822
Spacelab experiments on space motion sickness
[IAF PAPER 85-312] p 35 A86-15823

MOVING TARGET INDICATORS
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889

MUSCULAR FUNCTION
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
Muscle metabolism during exercise in the heat in unacclimatized and acclimatized humans
p 36 A86-16051

MUTATIONS
Molecular mechanisms of mutagenesis determined by the recombinant DNA technology
[DE85-016353] p 30 N86-13884

N

NECK (ANATOMY)
Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595

NEEDLES
Suture needle holder
[AD-D011764] p 37 N86-12958

NEURAL NETS
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

NEUROGLIA
Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593

NEUROLOGY
Mode of neural control mediating rat tail vasodilation during heating p 28 A86-16055
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973

NEUROMUSCULAR TRANSMISSION
Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595
Study of toxic and antigenic structures of botulinum neurotoxins
[AD-A156642] p 29 N86-13880

NEURONS
Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593
Encoding of spatial location by posterior parietal neurons p 27 A86-14714

NEUROPHYSIOLOGY
Neurochemical basis of chemical thermoregulation and artificial hypobiosis p 27 A86-15521
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525

NEUROSES
Mourning and traumatic neuroses - Clinical aspects and aeronautical incidents for one helicopter pilot
p 40 A86-13569

NITROGENATION
Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis
p 25 A86-14117

NOISE POLLUTION
A study of the psychophysical measurement on fluctuating sound by a stochastic approximation method
p 41 A86-14575

NOREPINEPHRINE
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

NUCLEAR EXPLOSION EFFECT
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888

NUCLEAR EXPLOSIONS
Studies of participants in nuclear tests
p 38 N86-12964

O

OCULOMOTOR NERVES
Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595

OPERATIONAL HAZARDS
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976

OPTICAL MEASUREMENT
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955

OPTOMETRY
Visual-contrast measurement - Measurement of the spatial transfer functions of the visual system --- Russian book p 27 A86-15467
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973

ORBITAL SPACE STATIONS
Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944

ORGANISMS
Comparative effect of lunar fines and terrestrtrial ash on the growth of a blue-green alga and germinating radish seeds p 30 N86-14097

ORTHOSTATIC TOLERANCE
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
Blood circulation changes in the carotid arteries pool caused by antiorthostasis and antiorthostatic hypokinesia p 27 A86-15513
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826

OXYGEN
Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13899

OXYGEN CONSUMPTION
Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053

P

PACIFIC OCEAN
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124

PATENT APPLICATIONS
Suture needle holder
[AD-D011764] p 37 N86-12958

PATENTS
Forward field autotransfusion device
[AD-D011765] p 37 N86-12957

PATTERN RECOGNITION
Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894

PATTERN REGISTRATION
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969

PENINSULAS
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124

PERCEPTION
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901

PERFORMANCE TESTS
Thermal stress imposed on pilots by NBC protective clothing --- Nuclear-Biological-Chemical
p 44 A86-13571

PERIPHERAL CIRCULATION
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515

PERIPHERAL VISION
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889

PERSONNEL SELECTION
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523

PHOTOSYNTHESIS
Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis
p 25 A86-14117

PHYSICAL FITNESS
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine
p 32 A86-14317

PHYSICAL WORK
Comparative analysis of corticosteroid and catecholamine levels excreted in urine of persons with different occupations p 34 A86-15520
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522

PHYSIOCHEMISTRY
Neurochemical basis of chemical thermoregulation and artificial hypobiosis p 27 A86-15521
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525

PHYSIOLOGICAL EFFECTS
Effects of head and body restraint on experimental motion-induced sickness in squirrel monkeys
p 26 A86-14314
Effect of exposure to heat, hypoxia, cold, acceleration, and vibration stress on the total blood sulfhydryl groups in human subjects p 33 A86-14319
Leukocytic reactions caused by emotional stress
p 34 A86-15519
Development of countermeasures for use in space missions --- to adaptive response to space flight
[IAF PAPER 85-327] p 36 A86-15832
Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053
The effect of spironolactone on the cardiocirculatory responses to upright tilt at sea level and at simulated high altitude
[AD-A157734] p 39 N86-13887

PHYSIOLOGICAL RESPONSES
Prediction of the functional state of the body during adaptation to high altitudes p 31 A86-13298
Determination of vestibular asymmetry with application to aviation medicine p 31 A86-13299
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
Aldosterone, cortisol, and electrolyte responses to hypobaric hypoxia in moderate-altitude natives
p 32 A86-14316
Blood pressure levels of active pilots compared with those of air traffic controllers p 33 A86-14318
Physiological reflections of mental workload
p 41 A86-14321
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522
Physiologic adaptation to space - Space adaptation syndrome
[IAF PAPER 85-313] p 35 A86-15824
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-15852
The effects of hypoxia induced by low atmospheric pressure on soft contact lens wear
[AD-A158556] p 38 N86-12963

PHYSIOLOGICAL TESTS

A psychophysiological mapping of cognitive processes
[AD-A158732] p 43 N86-13895

PHYSIOLOGICAL TESTS

Tachygastria and motion sickness p 32 A86-14315

PILOT PERFORMANCE

Determination of vestibular asymmetry with application to aviation medicine p 31 A86-13299

Complete right branch blocking and the flight fitness of pilots p 31 A86-13567

Positive pressure respiration, a means of protecting against +Gz accelerations - A theoretical approach p 31 A86-13568

Mourning and traumatic neuroses - Clinical aspects and aeronautical incidents for one helicopter pilot p 40 A86-13569

Intermediate collimation: Description - Goals - First results p 44 A86-13570

Thermal stress imposed on pilots by NBC protective clothing --- Nuclear-Biological-Chemical p 44 A86-13571

Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572

Investigation of Eustachianal function in JASDF pilots by new apparatus. I - On the pressural regulation of the Eustachian tube in normal human p 32 A86-13941

Psychological states of student pilots in flight training p 41 A86-13943

Changes of flying skills during non-flight periods p 41 A86-13944

Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics p 44 A86-14238

Blood pressure levels of active pilots compared with those of air traffic controllers p 33 A86-14318

The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831

Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890

Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892

PILOT TRAINING

Psychological states of student pilots in flight training p 41 A86-13943

Changes of flying skills during non-flight periods p 41 A86-13944

The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12968

PIPES (TUBES)

Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898

PLANETARY EVOLUTION

Habitability of the early earth - Clues from the physiology of nitrogen fixation and photosynthesis p 25 A86-14117

PLANTS (BOTANY)

Artificial closed ecosystem 'man-plants' with a full regeneration of atmosphere, water and ration vegetable part
[IAF PAPER 85-308] p 45 A86-15820

Energy exchange of plants under weightlessness conditions p 30 N86-14162

PLASTIC PROPERTIES

Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

PLEURAE

Forward field autotransfusion device
[AD-D011763] p 37 N86-12957

POLYCYTHEMIA

Effects of hemodilution on O2 transport in high-altitude polycythemia p 37 A86-16053

POLYMER MATRIX COMPOSITES

Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13899

POLYMERIZATION

A note on self-replicating information yielding the chemical origin of life p 48 A86-14774

POWER TRANSMISSION

Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975

PRECAMBRIAN PERIOD

The oldest traces of life (according to papers presented at the 27th session of the International Geological Congress) p 47 A86-13974

Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast p 25 A86-14119

Submarine hydrothermal vents and associated gradient environments as sites for the origin and evolution of life p 48 A86-14123

PRESSURE CHAMBERS

Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572

Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518

PRESSURE EFFECTS

The effects of hypoxia induced by low atmospheric pressure on soft contact lens wear
[AD-A158556] p 38 N86-12963

PRIMATES

Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE85-011992] p 30 N86-13885

PROBLEM SOLVING

Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901

PRODUCTIVITY

Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944

PROPHYLAXIS

The use of reflex therapy in the prophylaxis and treatment of motion sickness p 31 A86-13300

PROTECTIVE CLOTHING

Thermal stress imposed on pilots by NBC protective clothing --- Nuclear-Biological-Chemical p 44 A86-13571

Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942

The effect of leakage on the insulation provided by immersion-protection clothing p 44 A86-14320

PROTEIN METABOLISM

Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593

PROTOTYPES

Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942

Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822

PSYCHOACOUSTICS

A study of the psychophysical measurement on fluctuating sound by a stochastic approximation method p 41 A86-14575

PSYCHOLOGICAL FACTORS

Mourning and traumatic neuroses - Clinical aspects and aeronautical incidents for one helicopter pilot p 40 A86-13569

A study of the psychophysical measurement on fluctuating sound by a stochastic approximation method p 41 A86-14575

PSYCHOLOGICAL TESTS

The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831

PSYCHOMOTOR PERFORMANCE

Psychomotor performance after forward-facing impact p 32 A86-14310

PSYCHOPHYSIOLOGY

Leukocytic reactions caused by emotional stress p 34 A86-15519

Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523

The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831

A psychophysiological mapping of cognitive processes
[AD-A158732] p 43 N86-13895

The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897

PULMONARY FUNCTIONS

Pulmonary function in microgravity - Spacelab 4 and beyond
[IAF PAPER 85-322] p 36 A86-15828

PYROLYSIS

New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881

Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898

Q

QUARTZ

Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898

R

RADIATION DAMAGE

Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474

RADIATION DOSAGE

A handbook of radiation dosimetry and hygiene --- Russian book p 25 A86-13457

Accidental exposure to americium
[DE85-012794] p 39 N86-12965

RADIATION EFFECTS

Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959

Studies of participants in nuclear tests p 38 N86-12964

RADIATION HAZARDS

China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966

RADIATION PROTECTION

Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959

RADIATION SICKNESS

Radiation-sickness mechanisms --- Russian book p 27 A86-15444

RADIO FREQUENCIES

Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959

RADIOACTIVITY

Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds
[AD-A158741] p 40 N86-13888

RADIOBIOLOGY

A handbook of radiation dosimetry and hygiene --- Russian book p 25 A86-13457

Molecular mechanisms of cell death induced by radiation --- Russian book p 27 A86-15474

Biomedical and Environmental Sciences Program publications 1984
[DE85-015070] p 28 N86-12953

RADIOPATHOLOGY

Radiation-sickness mechanisms --- Russian book p 27 A86-15444

RAMAN SPECTROSCOPY

Raman activity in synchronously dividing bacteria
[DE85-015672] p 28 N86-12951

New physical methods for biological aerosol detection
[AD-A158218] p 29 N86-13881

RARE GASES

Decompression outcome following saturation dives with multiple inert gases in rats p 26 A86-16054

REACTION KINETICS

The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897

RECOGNITION

Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972

REDUCED GRAVITY

Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826

Pulmonary function in microgravity - Spacelab 4 and beyond
[IAF PAPER 85-322] p 36 A86-15828

The scanning electron microscope as a tool in space biology p 30 N86-14080

Solid waste treatment processes for space station p 47 N86-14091

REFLEXES

The use of reflex therapy in the prophylaxis and treatment of motion sickness p 31 A86-13300

Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595

Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827

REMOTE CONTROL
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976
RENAL FUNCTION
Blood pressure and plasma renin activity as predictors of orthostatic intolerance p 32 A86-14312
REQUIREMENTS
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901
RESEARCH MANAGEMENT
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950
RESPIRATION
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
RESPIRATORY PHYSIOLOGY
Positive pressure respiration, a means of protecting against +Gz accelerations - A theoretical approach
p 31 A86-13568
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles
p 44 A86-14311
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine
p 32 A86-14317
Comparison between the antihypoxic effectiveness of drugs and pressure-chamber training p 34 A86-15518
Decompression outcome following saturation dives with multiple inert gases in rats p 28 A86-16054
RETINA
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
RHYTHM (BIOLOGY)
Tachygastria and motion sickness p 32 A86-14315
RIBONUCLEIC ACIDS
Proteins and RNA in the neuron-neuroglia system of n. raphe dorsalis neurons of the ground squirrel brain during hibernation p 26 A86-14593
ROBOTICS
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905
ROBOTS
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905
RODENTS
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952

S

SAFETY MANAGEMENT
Proceedings of a workshop on Radiofrequency Radiation bioeffects held at Wachtberg-Werthhoven, West Germany on 11-13 September 1984
[AD-A157090] p 38 N86-12959
SALICYLATES
Interaction between Escherichia coli and lunar fines
p 30 N86-14088
SALINITY
Carbon isotope discrepancy between Precambrian stromatolites and their modern analogs - Inferences from hypersaline microbial mats of the Sinai Coast
p 25 A86-14119
SCANNING
Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892
SEMICIRCULAR CANALS
Neck and oculomotor reflexes induced by electrical stimulation of the semicircular canal ampullae in the pigeon p 26 A86-14595
SENSITIVITY
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
SHAPES
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894
SIGNAL ANALYSIS
Electroencephalograms and the read-out of information in the visual cortex during image recognition
p 33 A86-15512
Biophysical basis of the two-component analysis of biosignals of the pulsed filling of the blood vessels
p 34 A86-15517
SIGNAL TRANSMISSION
Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975
SIGNS AND SYMPTOMS
Tachygastria and motion sickness p 32 A86-14315
SITES
Submarine hydrothermal vents and associated gradient environments as sites for the origin and evolution of life
p 48 A86-14123
SKIN (ANATOMY)
Dermal substance collection device
[AD-D011848] p 38 N86-12962
SKYLAB PROGRAM
Understanding metabolic alterations in space flight using quantitative models - Fluid and energy balance
[IAF PAPER 85-325] p 36 A86-15830
SLEEP
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
SOLID WASTES
Solid waste treatment processes for space station
p 47 N86-14091
SPACE ADAPTATION SYNDROME
Physiologic adaptation to space - Space adaptation syndrome
[IAF PAPER 85-313] p 35 A86-15824
Development of countermeasures for use in space missions --- to adaptive response to space flight
[IAF PAPER 85-327] p 36 A86-15832
SPACE FLIGHT TRAINING
Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822
SPACE MAINTENANCE
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905
SPACE MISSIONS
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15817
SPACE PERCEPTION
Encoding of spatial location by posterior parietal neurons p 27 A86-14714
Visual-contrast measurement - Measurement of the spatial transfer functions of the visual system --- Russian book p 27 A86-15467
SPACE PROCESSING
Energy exchange of plants under weightlessness conditions p 30 N86-14162
SPACE SHUTTLES
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles
p 44 A86-14311
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
SPACE SIMULATORS
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
SPACE STATIONS
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles
p 44 A86-14311
Utilization of space stations in the field of life sciences
[IAF PAPER 85-51] p 35 A86-15637
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905
Solid waste treatment processes for space station
p 47 N86-14091
SPACE SUITS
Compatible atmospheres for a space suit, Space Station, and Shuttle based on physiological principles
p 44 A86-14311
Mass loss of shuttle space suit orthofabric under simulated ionospheric atomic oxygen bombardment
[NASA-TM-87149] p 46 N86-13899
SPACEBORNE EXPERIMENTS
Microbiological management of Spacelab 3 rodents
[AIAA PAPER 85-6090] p 26 A86-14386
Utilization of space stations in the field of life sciences
[IAF PAPER 85-51] p 35 A86-15637
Spacelab experiments on space motion sickness
[IAF PAPER 85-312] p 35 A86-15823
USSR Space Life Sciences Digest, Issue 2
[NASA-CR-3922(02)] p 28 N86-12949
Energy exchange of plants under weightlessness conditions p 30 N86-14162
SPACECRAFT CABINS
Architect discusses space habitat designs
p 47 N86-14161
SPACECRAFT DESIGN
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15817
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900
Architect discusses space habitat designs
p 47 N86-14161
SPACECRAFT ENVIRONMENTS
Development of countermeasures for use in space missions --- to adaptive response to space flight
[IAF PAPER 85-327] p 36 A86-15832
Ensuring Space Station human productivity
[IAF PAPER 85-500] p 45 A86-15944
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
Human factors in space station architecture 1: Space station program implications for human factors research
[NASA-TM-86702] p 46 N86-13900
Biological life-support systems for long-duration space flights p 47 N86-14160
SPACECREWS
Hermes ECLSS - Review of general requirements and application to the spaceplane definition
[IAF PAPER 85-304] p 45 A86-15817
SPACELAB
Spacelab experiments on space motion sickness
[IAF PAPER 85-312] p 35 A86-15823
Spacelab life sciences flight experiments - An integrated approach to the study of cardiovascular deconditioning and orthostatic hypotension
[IAF PAPER 85-316] p 36 A86-15826
Pulmonary function in microgravity - Spacelab 4 and beyond
[IAF PAPER 85-322] p 36 A86-15828
SPACELAB PAYLOADS
Microbiological management of Spacelab 3 rodents
[AIAA PAPER 85-6090] p 26 A86-14386
SPATIAL FILTERING
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524
SPHYGMOGRAPHY
Human hemodynamic change under high atmospheric pressure p 37 N86-12455
STABILIZATION
A note on self-replicating information yielding the chemical origin of life p 48 A86-14774

STATISTICAL ANALYSIS
Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972
STRESS (PHYSIOLOGY)
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-16052
STRESS (PSYCHOLOGY)
Psychological states of student pilots in flight training p 41 A86-13943
Leukocytic reactions caused by emotional stress p 34 A86-15519
The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831
STRESS CONCENTRATION
A possible energetic role of mineral surfaces in chemical evolution p 48 A86-14114
STUDENTS
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
SUBMARINES
Cardiorespiratory fitness and cognitive performance before and after confinement in a nuclear submarine p 32 A86-14317
SUBMERGING
The effect of leakage on the insulation provided by immersion-protection clothing p 44 A86-14320
SURFACE REACTIONS
A possible energetic role of mineral surfaces in chemical evolution p 48 A86-14114
SURGEONS
Suture needle holder
[AD-D011764] p 37 N86-12958
SURGERY
Unsteady blood flow in humans under artificial conditions --- Russian book p 33 A86-15443
SURVIVAL EQUIPMENT
Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974
SUSPENDING (HANGING)
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle p 26 A86-14313
SYNCOPE
Nonhypoxic syncopes at high altitude - The results of two observational trials in a hypobaric chamber p 31 A86-13572
SYSTEMS ENGINEERING
Study on design techniques for robots (space applications). Volume 1, part A: Technical results
[FOK-TR-R-84-110-VOL-1-PT-A] p 46 N86-13902
Study on design techniques for robots (space applications). Volume 1, part B: Technical results
[FOK-TR-R-84-110-VOL-1-PT-B] p 47 N86-13903
Study on design techniques for robots (space applications). Volume 2: Technical appendices
[FOK-TR-R-84-110-VOL-2] p 47 N86-13904
Study on design techniques for robots (space applications). Volume 3: Executive summary
[FOK-TR-R-84-110-VOL-3] p 47 N86-13905

T

TARGET RECOGNITION
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
TASK COMPLEXITY
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524
TELECOMMUNICATION
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
Power and signal transmission for mobile teleoperated systems
[DE85-013994] p 45 N86-12975
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976
TELEOPERATORS
Future directions in mobile teleoperation
[DE85-014308] p 46 N86-12976
TEST EQUIPMENT
Pulmonary function in microgravity - Spacelab 4 and beyond
[IAF PAPER 85-322] p 36 A86-15828
THERAPY
The use of reflex therapy in the prophylaxis and treatment of motion sickness p 31 A86-13300
THERMAL INSULATION
The effect of leakage on the insulation provided by immersion-protection clothing p 44 A86-14320
THERMOPHILES
Extremely thermophilic bacteria living at temperatures above 100 C p 25 A86-13648
THERMOREGULATION
Heat sensitivity of the medial preoptic region of the hypothalamus during seasonal adaptation and acclimatization to high ambient temperature p 26 A86-14594
Neurochemical basis of chemical thermoregulation and artificial hypobiosis p 27 A86-15521
Neurochemical mechanisms of artificial hypobiosis and chemical thermoregulation p 27 A86-15525
Thermoregulatory and blood responses during exercise at graded hypohydration levels p 36 A86-16052
Mode of neural control mediating rat tail vasodilation during heating p 28 A86-16055
TIME
A new hazard function estimator of performance time
[AD-A157843] p 42 N86-12971
TIME DEPENDENCE
Changes of flying skills during non-flight periods p 41 A86-13944
TIME LAG
Studies of participants in nuclear tests p 38 N86-12964
TIME SERIES ANALYSIS
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics p 44 A86-14238
TOLERANCES (PHYSIOLOGY)
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
TORSO
Effects of head and body restraint on experimental motion-induced sickness in squirrel monkeys p 26 A86-14314
TOXICITY
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
TOXINS AND ANTITOXINS
Study of toxic and antigenic structures of botulinum neurotoxins
[AD-A156642] p 29 N86-13880
TRANSFER FUNCTIONS
Visual-contrast measurement - Measurement of the spatial transfer functions of the visual system --- Russian book p 27 A86-15467
TRANSFUSION
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
TRANSPORT AIRCRAFT
Alerted monitors: Human operators aided by automated detectors
[PB85-222750] p 47 N86-13906
TURNING FLIGHT
Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890

U

UNIVERSITIES
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
UNSTEADY FLOW
Unsteady blood flow in humans under artificial conditions --- Russian book p 33 A86-15443
URINALYSIS
Comparative analysis of corticosteroid and catecholamine levels excreted in urine of persons with different occupations p 34 A86-15520
USER REQUIREMENTS
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901

V

VALVES
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
VAPORS
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891
VASODILATION
Mode of neural control mediating rat tail vasodilation during heating p 28 A86-16055
VELOCITY
The spatial and temporal parameters of velocity discrimination
[AD-A158735] p 43 N86-13896
VESTIBULES
Determination of vestibular asymmetry with application to aviation medicine p 31 A86-13299
VIBRATIONAL STRESS
Effect of exposure to heat, hypoxia, cold, acceleration, and vibration stress on the total blood sulfhydryl groups in human subjects p 33 A86-14319
VISION
The effects of hypoxia induced by low atmospheric pressure on soft contact lens wear
[AD-A158556] p 38 N86-12963
VISUAL ACCOMMODATION
Intermediate collimation: Description - Goals - First results p 44 A86-13570
VISUAL ACUITY
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973
VISUAL DISCRIMINATION
Visual-contrast measurement - Measurement of the spatial transfer functions of the visual system --- Russian book p 27 A86-15467
Electroencephalograms and the read-out of information in the visual cortex during image recognition p 33 A86-15512
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
VISUAL FIELDS
Encoding of spatial location by posterior parietal neurons p 27 A86-14714
VISUAL PERCEPTION
Intermediate collimation: Description - Goals - First results p 44 A86-13570
The visual stress model - A psycho-physiological method for the evaluation of operational reliability of pilots and cosmonauts
[IAF PAPER 85-326] p 41 A86-15831
Criteria for a state-of-the-art vision test system
[AD-A157099] p 45 N86-12973
Enhancing sensitivity to visual motion and enhancing visual sensitivity
[AD-A158800] p 40 N86-13889
Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890
A psychophysiological mapping of cognitive processes
[AD-A158732] p 43 N86-13895
The spatial and temporal parameters of velocity discrimination
[AD-A158735] p 43 N86-13896
VISUAL STIMULI
The effect of high spatial frequencies on visual recognition processes p 41 A86-15524

W

WASTE TREATMENT
Solid waste treatment processes for space station p 47 N86-14091
WATER IMMERSION
Cold water immersion test of prototype anti-exposure suits for aircrews p 44 A86-13942
WAVEFORMS
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952
WEAR
The effects of hypoxia induced by low atmospheric pressure on soft contact lens wear
[AD-A158556] p 38 N86-12963
WEIGHT (MASS)
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960
WEIGHTLESSNESS
The human cardiovascular system in the absence of gravity
[IAF PAPER 85-315] p 35 A86-15825
Quantitative evaluation of human arterial baroreceptor reflexes
[IAF PAPER 85-317] p 36 A86-15827
Red blood cell decreases of microgravity
[IAF PAPER 85-324] p 36 A86-15829
Understanding metabolic alterations in space flight using quantitative models - Fluid and energy balance
[IAF PAPER 85-325] p 36 A86-15830

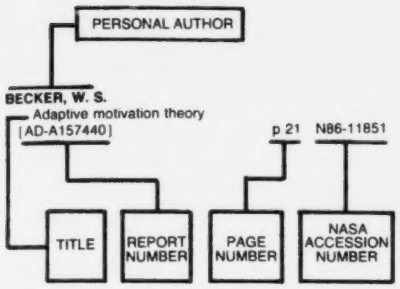
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878
Energy exchange of plants under weightlessness conditions p 30 N86-14162
WEIGHTLESSNESS SIMULATION
Endocrine and fluid metabolism in males and females of different ages after bedrest, acceleration and lower body negative pressure
[NASA-TM-58270] p 39 N86-13886
WILDLIFE
Environmental impact research program. Status and source of habitat models and literature reviews, December 1984
[AD-A156809] p 28 N86-12950
WORK CAPACITY
Types of work capacity and the frequency of the development of ischemic heart disease and hypertonic disease p 34 A86-15516
Prediction of human physical work capacity in high-temperature environments p 34 A86-15522
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969
WORKLOADS (PSYCHOPHYSIOLOGY)
Physiological reflections of mental workload p 41 A86-14321
Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890
Effects of digital altimetry on pilot workload
[NASA-TM-86424] p 42 N86-13892

X

X RAY DIFFRACTION
Small X-ray diffraction of immunoglobulin-membrane complexes
[AD-A158252] p 29 N86-13882

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

AIDARALIEV, A. A.
Use of a linguistic test in the course of large-scale physiological selection of men for work in an adverse environment p 35 A86-15523
AIHARA, K.
Effects of cation ions in nerve excitation p 37 N86-12377
ALLAN, J. R.
The effect of leakage on the insulation provided by immersion-protection clothing p 44 A86-14320
ANDERSEN, R. A.
Encoding of spatial location by posterior parietal neurons p 27 A86-14714
ANDREYEV, I.
Biological life-support systems for long-duration space flights p 47 N86-14160
AZHIMAMATOV, T. A.
Hemodynamics during short-term application of lower body negative pressure p 33 A86-15514

B

BALTABAEV, T. B.
Hemodynamics during short-term application of lower body negative pressure p 33 A86-15514
BAROSS, J. A.
Submarine hydrothermal vents and associated gradient environments as sites for the origin and evolution of life p 48 A86-14123
BARRAULT, B.
Intermediate collimation: Description - Goals - First results p 44 A86-13570
BARRETT, R. A.
The scanning electron microscope as a tool in space biology p 30 N86-14080
BASEIA, B.
A note on self-replicating information yielding the chemical origin of life p 48 A86-14774
BATEJAT, D.
Intermediate collimation: Description - Goals - First results p 44 A86-13570
BAUER, L.
A psychophysiological mapping of cognitive processes [AD-A158732] p 43 N86-13895
BECKLEN, R.
The perception of motion during colinear eye movements p 41 A86-14143
BELKANIIA, G. S.
Typological analysis of central and peripheral hemodynamics during orthostasis in normal subjects and in patients with arterial hypertonia p 33 A86-15515
BELL, E. L.
Interactive scenario computer model for dose rates to aircrews in flight through nuclear debris clouds [AD-A158741] p 40 N86-13888
BELL, H. H.
Pilot-oriented performance measurement [AD-A158849] p 40 N86-13890
BELOVA, E. V.

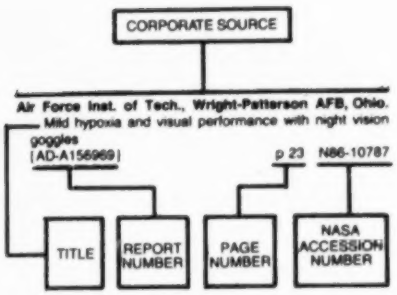
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Air Command and Staff Coll., Maxwell AFB, Ala.
The helicopter to fixed wing conversion program: A critical review
[AD-A156820] p 42 N86-12968

Air Force Human Resources Lab., Brooks AFB, Tex.
Pilot-oriented performance measurement
[AD-A158849] p 40 N86-13890

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
Normalized predictive deconvolution - A time series algorithm for modeling human operator dynamics
p 44 A86-14238
Information requirements determination: An empirical investigation of obstacles within an individual
[AD-A158025] p 46 N86-13901

Air Force Systems Command, Wright-Patterson AFB, Ohio.
Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822

Army Engineer Waterways Experiment Station, Vicksburg, Miss.
Environmental impact research program: Status and source of habitat models and literature reviews, December 1984
[AD-A156899] p 28 N86-12950

Army Environmental Hygiene Agency, Aberdeen Proving Ground, Md.
Health hazard evaluation of liquid monopropellants. Phase 5: Comparative inhalation toxicities of LGP 1776, LGP 1845, and HAN (hydroxylammonium nitrate)
[AD-A159090] p 40 N86-13891

Army Research Inst. of Environmental Medicine, Natick, Mass.
The effect of spironolactone on the cardiocirculatory responses to upright tilt at sea level and at simulated high altitude
[AD-A157734] p 39 N86-13887

B

Battelle Northwest Labs., Richland, Wash.
Design, construction and testing of a dc bioeffects enclosure for small animals
[DE05-016798] p 29 N86-13883

Boston Univ., Mass.
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124

Brown Univ., Providence, R. I.
Cortical plasticity: Theoretical analysis, experimental results
[AD-A157965] p 38 N86-12961

C

California Univ., Berkeley. Lawrence Berkeley Lab.
Monitoring of circadian waveforms in rodents exposed to high-intensity static magnetic fields
[DE85-015225] p 28 N86-12952

California Univ., San Diego, La Jolla.
Human cognition and performance
[AD-A157665] p 42 N86-12970

Chicago Univ., Ill.
Stimulus structures and mental representations in expert comprehension of computer programs
[AD-A157520] p 42 N86-12969

D

Department of the Army, Washington, D. C.
Forward field autotransfusion device
[AD-D011763] p 37 N86-12957
Suture needle holder
[AD-D011764] p 37 N86-12958
Dermal substance collection device
[AD-D011848] p 38 N86-12962

Department of the Navy, Washington, D. C.
Infrared optical measurement of blood gas concentrations and fiber optic catheter
[AD-D011836] p 37 N86-12955
Low temperature inflator apparatus
[AD-D011810] p 45 N86-12974

F

Fayetteville State Univ., N.C.
The scanning electron microscope as a tool in space biology
p 30 N86-14080

H

Hamilton Standard, Windsor Locks, Conn.
Development of a carbon formation reactor for carbon dioxide reduction
[NASA-CR-171907] p 46 N86-13898

I

Illinois Univ., Champaign.
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-A159118] p 43 N86-13897

Illinois Univ., Urbana.
Diagnosing cognitive errors: Statistical pattern classification and recognition approach
[AD-A158108] p 42 N86-12972

J

Jet Propulsion Lab., California Inst. of Tech., Pasadena.
The microbial community at Laguna Figueroa, Baja California Mexico - From miles to microns
p 26 A86-14124

Joint Publications Research Service, Arlington, Va.
Human hemodynamic change under high atmospheric pressure
p 37 N86-12458
China report: Science and technology
[JPRS-CST-85-019] p 39 N86-12966
Protection of eyes against laser damage studied
p 39 N86-12967
Biological life-support systems for long-duration space flights
p 47 N86-14160
Architect discusses space habitat designs
p 47 N86-14161
Energy exchange of plants under weightlessness conditions
p 30 N86-14162

L

Letterman Army Inst. of Research, San Francisco, Calif.
Energy expenditure and activity patterns of cadets at the United States Military Academy, West Point, New York
[AD-A157857] p 38 N86-12960

Los Alamos National Lab., N. Mex.
Raman activity in synchronously dividing bacteria
[DE85-015872] p 28 N86-12951

Louisville Univ., Ky.
Development and testing of a mouse simulated space flight model
[NASA-CR-176359] p 29 N86-13878

M

Management and Technical Services Co., Washington, D.C.
Understanding metabolic alterations in space flight using quantitative models - Fluid and energy balance
[IAF PAPER 85-325] p 36 A86-15830
USSR Space Life Sciences Digest, Issue 2
[NASA-CR-3922(02)] p 28 N86-12949

Maryland Univ., Baltimore.
Effects of suspension hypokinesia/hypodynamia on rat skeletal muscle
p 26 A86-14313

Massachusetts Inst. of Tech., Cambridge.
Spacelab experiments on space motion sickness
[IAF PAPER 85-312] p 35 A86-15823
Hypothesizing and refining causal models
[AD-A158165] p 43 N86-13893
Generating and generalizing models of visual objects
[AD-A158197] p 43 N86-13894

Miami Univ., Oxford, Ohio.
Space motion sickness preflight adaptation training Preliminary studies with prototype trainers
[IAF PAPER 85-311] p 35 A86-15822

Missouri Univ., Columbia.
Solid waste treatment processes for space station
p 47 N86-14091

Morgan State Univ., Baltimore, Md.
Comparative effect of lunar fines and terrestrial ash on the growth of a blue-green alga and germinating radish seeds
p 30 N86-14097

N

National Academy of Sciences - National Research Council, Washington, D. C.
Studies of participants in nuclear tests
p 38 N86-12964

National Aeronautics and Space Administration, Washington, D.C.
Development of countermeasures for use in space missions
[IAF PAPER 85-327] p 36 A86-15832

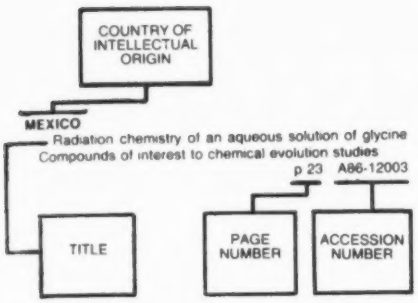
Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

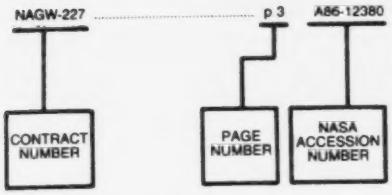
Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

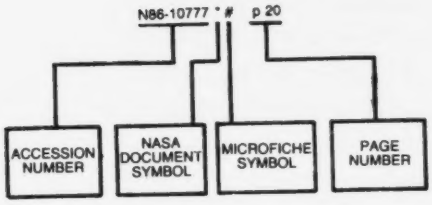
Typical Accession Number Index Listing



Listings in this index are arranged alpha-numerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page vii.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

AVAILABILITY SOURCE
The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A04.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 184 reports, articles and other documents announced during March 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 49
Includes genetics.

Category 52 Aerospace Medicine 58
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 69
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 73
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 76
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1

A86-16751
THE EFFECT OF KALLIKREIN ON THE DEVELOPMENT OF A GENERAL ADAPTATION SYNDROME [VLIIANIE KALLIKREINA NA RAZVITIE OBSHCHEGO ADAPTATSIONNOGO SINDROMA]
IU. V. KOLENDA, S. V. VOVCHUK, and A. P. LEVITSKII (Gorodskaia Klinicheskaia Bol'nitsa No. 2, Odessa, Ukrainian SSR) Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia (ISSN 0031-2991), July-Aug. 1985, p. 52-54. In Russian. refs

The effect of kallikrein on the resistance of rats to immobilization stress has been investigated, experimentally. It is shown that intravenous injection of kallikrein increased the peripheral blood concentration of aldosterone, a steroid hormone regulating sodium and potassium metabolism. It is suggested that the adaptogenic effect of kallikrein may be mediated by the adrenal cortex. I.H.

A86-16752
THE EFFECT OF AURICULAR ELECTRIC STIMULATION ON MYELOPEPTIDE PRODUCTION AND EARLY REACTIONS OF BLOOD SYSTEMS CELL POPULATIONS IN THE PRESENCE OF IMMOBILIZATION STRESS [VLIIANIE AURIKULIARNOI ELEKTROSTIMULIATSII NA PRODUKTSIIU MIELOPEPTIDOV I RANNIE REAKTSII KLETOCHNYKH POPULIATSII SISTEMY KROVI PRI IMMOBILIZATSIONNOM STRESSE]
A. M. VASILENKO, L. A. ZAKHAROVA, and O. I. BELOUSOVA (Tsentral'nyi Nauchno-Issledovatel'skii Institut Refleksoterapii; Institut Immunologii, Moscow, USSR) Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia (ISSN 0031-2991), Sept.-Oct. 1985, p. 26-30. In Russian. refs

A86-16754
SOME RESULTS OF A STUDY OF THE BIOENERGETICS OF RAT MUSCLE IN WEIGHTLESSNESS [NEKOTORYE ITOGI IZUCHENIIA BIOENERGETIKI MYSHTS V NEVESOMOSTI]
E. S. MAILIAN, E. A. KOVALENKO, and L. B. BURAVKOVA Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia (ISSN 0031-2991), Sept.-Oct. 1985, p. 69-73. In Russian. refs

Oxidative phosphorylation and the activity of cytochrome oxidase and lactate dehydrogenase were studied in the skeletal muscles of rats exposed to weightlessness on board three different Cosmos biosatellites. It is found that exposure to weightlessness for a period of 18-22 days was accompanied by a marked inhibition of oxidative metabolism and glycolysis in skeletal muscles having different morphofunctional specializations. Disorders of oxidative phosphorylation and reduced enzyme activity were also found. Muscular tissue was restored by the end of the first month of a readaptation period. I.H.

A86-16783
THE GEROPROTECTIVE ACTIVITY OF 2,6-DIMETHYL 3,5-DIETHOXYCARBONYL 1,4-DIHYDROPYRIDINE [GEROPROTEKTORNAIA AKTIVNOST' 2,6-DIMETIL 3,5-DIETOKSIKARBONIL 1,4-DIGIDROPIRIDINA]
L. K. OBUKHOVA, G. IA DUBUR, G. D. TIRZIT, IA. R. ULDRIKIS (AN SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR; AN LSSR, Institut Organicheskogo Sinteza, Riga, Latvian SSR), and N. M. EMANUEL Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 284, no. 5, 1985, p. 1271-1274. In Russian. refs

A86-16800
MODERN CONCEPTS REGARDING SOME NONTRADITIONAL NEUROENDOCRINE MECHANISMS OF STRESS [SOVREMENNYE PREDSTAVLENIIA O NEKOTORYKH NETRADITSIONNYKH NEIROEN DOKRINNYKH MEKHANIZMAKH STRESSA]
V. D. SLEPUSHKIN, IU. B. LISHMANOV, G. K. ZOLOEV, and I. A. PRUM (Vsesoiuznyi Kardiologicheskii Nauchnyi Tsentr, Tomsk, USSR) Uspekhi Fiziologicheskikh Nauk (ISSN 0301-1798), vol. 16, Oct.-Dec. 1985, p. 106-118. In Russian. refs

The mechanisms involved in stress reaction (SR) were studied by analyzing humoral changes that follow application of stress (in man and animals). It is shown that, besides the stimulation of the hypothalamus-hypopheseal-adrenal system (HHAS), the SR syndrome includes activation of the parathyroid (PS) and epipyseal (ES) systems, as well as the release of opioid neuropeptides. The PS is seen to play the key role during the initial anxiety, phase (AP) of the SR, with an almost immediate increase of blood parathormone accompanied by an increase of blood Ca and, consequently, eventual activation of the HHAS. The ES activity effects the transmission from the AP to the resistance phase of the SR, by further stimulating the HHAS and intracellular cyclic AMP/cyclic GMP systems. The opioids, particularly endorphins and enkephalins, contribute to the SR as neurotransmitters. I.S.

DICYCLOHEXYLCARBODIIMIDE-SENSITIVE ATPASE IN HALOBACTERIUM SACCHAROVORUM
H. KRISTJANSSON and L. I. HOCHSTEIN (NASA, Ames Research Center, Moffett Field, CA) Archives of Biochemistry and Biophysics (ISSN 0003-9861), vol. 241, Sept. 1985, p. 590-595. refs

Membranes from Halobacterium saccharovorum contained a cryptic ATPase which required Mg(2+) or Mn(2+) and was activated by Triton X-100. The optimal pH for ATP hydrolysis was 9-10. ATP or GTP were hydrolyzed at the same rate while ITP, CTP, and UTP were hydrolyzed at about half that rate. The products of ATP hydrolysis were ADP and phosphate. The ATPase required high concentrations (3.5 M) of NaCl for maximum activity. ADP

was a competitive inhibitor of the activity, with an apparent Ki of 50 micro-M. Dicyclohexylcarbodiimide (DCCD) inhibited ATP hydrolysis. The inhibition was marginal at the optimum pH of the enzyme. When the ATPase was preincubated with DCCD at varying pH values, but assayed at the optimal pH for activity, DCCD inhibition was observed to increase with increasing acidity of the preincubation medium. DCCD inhibition was also dependent on time of preincubation, and protein and DCCD concentrations. When preincubated at pH 6.0 for 4 h at a protein:DCCD ratio of 40 (w/w), ATPase activity was inhibited 90 percent. Author

THE ROLE OF REABSORPTION IN THE SPECTRAL DISTRIBUTION OF PHYTOPLANKTON FLUORESCENCE EMISSION
D. J. COLLINS, I. S. MCDERMID (California Institute of Technology, Jet Propulsion Laboratory, Pasadena), D. A. KIEFER, and J. B. SOOHOO (Southern California, University, Los Angeles) Deep-Sea Research (ISSN 0198-0149), vol. 32, 1985, p. 983-1003. NASA-supported research. refs

A theoretical model has been developed to describe an experimentally observed spectral shift in the fluorescence emission from phytoplankton as a result of the internal reabsorption of that emission. This model accounts for both the absorption of the primary excitation and the modification of the fluorescence through the reabsorption of the emitted light by the chloroplast and by the surrounding medium. Comparisons are made between the results of the theoretical model and data derived from experiments using a number of different phytoplankton species, each adapted to varying light conditions. The details of the model are discussed, and the consequences of its interpretation on the spectral distribution of the fluorescence emission from phytoplankton are examined. Author

A86-17467
BRAIN ASYMMETRY IN ANIMALS [ASIMMETRIIA MOZGA ZHIVOTNYKH]
V. L. BIANKI Leningrad, Izdatel'stvo Nauka, 1985, 295 p. In Russian. refs

Laboratory studies on the morphological and functional lateral specialization of the large hemispheres of the animal brain are presented. Special consideration is given to aspects of individual and species-related asymmetry, the biological and environmental factors involved in its development, and the phenomenon of lateralization in the analysis of physical stimuli by the animal brain. Lateral specialization of the vertebrate brain is discussed in the framework of the induction-deduction hypothesis (Bianki, 1982 and 1983), and its role in the processes of adaptation and biological evolution is considered. I.S.

A86-17607*# National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
AMES RESEARCH CENTER LIFE SCIENCES PAYLOAD - OVERVIEW OF RESULTS OF A SPACEFLIGHT OF 24 RATS AND 2 MONKEYS
P. X. CALLAHAN, C. SCHATTE, R. E. GRINDELAND, G. BOWMAN (NASA, Ames Research Center, Moffett Field, CA), W. A. LENCKI (GE Management and Technical Services Co., Moffett Field, CA) et al. AIAA, Shuttle Environment and Operations Conference, 2nd, Houston, TX, Nov. 13-15, 1985. 11 p.
(AIAA PAPER 85-6092)

Engineering and biological data gathered with the research animal holding facilities (RAHFs) used on the Spacelab 3 mission are summarized. The animals totaled 24 rats and two squirrel monkeys. The RAHFs included biotelemetry, cameras and environmental monitoring equipment. The primary mission goal was engineering evaluation of the RAHFs and ancillary equipment. Tightly-fitted seals were found to be a necessity for keeping waste and food particles from contaminating the Spacelab equipment. All the rats returned with little muscle tone and suppressed immune systems. The monkeys displayed highly individual responses to spaceflight. Both species exhibited reduced abilities to maintain meticulously clean furs in weightlessness. Details of several physiological changes detected during post-flight autopsies are provided. M.S.K.

A86-17679* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
THE EFFECT OF HIGH ENERGY (HZE) PARTICLE RADIATION (AR-40) ON AGING PARAMETERS OF MOUSE HIPPOCAMPUS AND RETINA
D. E. PHILPOTT, K. KATO, R. CORBETT, J. STEVENSON, S. BLACK (NASA, Ames Research Center, Moffett Field, CA), W. SAPP (Tuskegee Institute, AL), J. MIQUEL, K. A. LINDSETH (San Jose State University, CA), and E. V. BENTON (San Francisco, University, CA) Scanning Electron Microscopy, vol. 3, 1985, p. 1177-1182. refs

Eight month old C57BL6 mice were exposed (head only) to 0.5 rad or 50 rads of Argon particles at the Lawrence Berkeley Radiation Facility, CA. Neuromotor performance was assessed monthly for six months beginning twelve weeks post-irradiation using a 'string test'. The decline in motor performance was dose-related and none of the animals was able to complete the task after four months of testing. Morphological changes were monitored six and twelve months post-irradiation by light and electron microscopy. The synaptic density in the CA-1 area of the hippocampus decreased six and twelve months after irradiation. The decrease after twelve months was less than after six months. The width of the outer nuclear layer (ONL) of the retina increased with increasing dose. The number of blood vessels between the ONL and the ganglion layer decreased twelve months after irradiation and this area did not show significant accumulation of age pigment. Author

A86-17808
THE UNIQUENESS OF ARCHAEBACTERIA
R. A. GARRETT (Aarhus Universitet, Denmark) Nature (ISSN 0028-0836), vol. 318, Nov. 21, 1985, p. 233-235.

Recent advances in understanding the molecular biology of the archaebacteria, which demonstrate the uniqueness of this kingdom, are reviewed. Findings on the characteristics of nucleotide sequences, genome instability, virus-host systems, the regulation of gene expression, and the presence of introns in the genome of archaebacteria are summarized. Disputes concerning the origin of archaebacteria are briefly reviewed. C.D.

A86-18026* Saskatchewan Univ., Saskatoon.
PLANETARY ECOLOGY; PROCEEDINGS OF THE SIXTH INTERNATIONAL SYMPOSIUM ON ENVIRONMENTAL BIOGEOCHEMISTRY, SANTA FE, NM, OCTOBER 10-14, 1983
D. E. CALDWELL, ED. (Saskatchewan, University, Saskatoon, Canada), J. A. BRIERLEY, ED., and C. L. BRIERLEY, ED. Symposium supported by USGS, DOE, NASA, et al.;. New York, Van Nostrand Reinhold Co., 1985, 604 p. For individual items see A86-18027 to A86-18034.
(Contract NGW-378)

Topics presented include biological evolution and planetary chemistry; C-1 compounds; transport, deposition, and weathering; sulfur transformations; ground water; transformation processes for nitrogen oxides; and soils. Papers are presented on immunological studies on the organic matrix of recent and fossil invertebrate shells; biogenic gases in sediments deposited since Miocene times on the Walvis Ridge, South Atlantic Ocean; aspects of the biogeochemistry of Big Soda Lake, NV; mesophilic manganese-oxidizing bacteria from hydrothermal discharge areas at 21 deg North on the East Pacific Rise; and autotrophic growth and iron oxidation and inhibition kinetics of Leptospirillum ferrooxidans. Consideration is also given to thermophilic archaebacteria occurring in submarine hydrothermal areas; fate of sulfate in a soft-water, acidic lake; geochemical conditions in the ground water environment; microbial transformations as sources and sinks for nitrogen oxides; and the biogeochemistry of soil phosphorus. I.S.

MICROBIAL MATS AND MODERN STROMATOLITES IN SHARK BAY, WESTERN AUSTRALIA
S. GOLUBIC (Boston University, MA) IN: Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 . New York, Van Nostrand Reinhold Co., 1985, p. 3-16. Research supported by the Bureau of Mineral Resources, Baas Becking Institute, and Roche Pharmaceutical Co. refs
(Contract NSF GA-43391; NSF OCE-12999; NSF EAR-76-84233; NSF EAR-79-11200; NSF EAR-81-07686; NSG-7588; NAGW-141)

Distribution, external morphology, texture, and microbial composition of microbial mats in Hamelin Pool, Shark Bay, Western Australia, have been studied and reviewed along a composite representative profile starting from the permanently submerged zone, across the zones of periodic flooding, toward permanently emerged land and coastal dunes. The following nine types of algal mats have been recognized: colloform, gelatinous, smooth, pincushion, tufted, mamillate, film, reticulate, and blister. Solar ponds represent a particular environment. The mat types represent microbial communities that are characterized by one or more dominant microorganisms. The colonization and stabilization of loose sediment is carried out by a microbial assemblage of generalists that prepare the ground for later replacement and succession by specialized microflora. Lithification of microbial mats takes place periodically, mainly during the austral summer. This process is destructive for the microbial community but increases the preservation potential of the stromatolitic structures. Author

PEPTIDOGLYCAN ENVELOPE IN THE CYANELLES OF GLAUCOCYSTIS NOSTOCHINEARUM
O. T. SCOTT (Fort Lewis College, Durango, CO) IN: Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 . New York, Van Nostrand Reinhold Co., 1985, p. 27-40. Research supported by the Ford Foundation and Navajo Nation. refs

The cyanelles found in Glaucocystis have been investigated in several ultrastructural and biochemical studies in unsuccessful attempts to detect the presence of a peptidoglycan envelope, a basal layer of non-Archaebacterial prokaryotic cell walls. Disruption of intact Glaucocystis cells with a glass tissue homogenizer permitted the isolation of the uniquely shaped cyanelles. Preservation of intactness and shape of the cyanelles in a hypotonic isolation medium was terminated by lysozyme at final concentrations of less than 50 micrograms g/ml. At 5 micrograms g/ml, lysozyme achieves lysis within a few seconds, and this was found to be the optimal concentration. Lysozyme-mediated lysis was inhibited by N-acetyl-glucosamine-2, a known competitive inhibitor. Diaminopimelic acid was detected by standard amino acid-analysis methods, prompting the conclusion that the cyanelles of Glaucocystis are cyanobacterial endosymbionts. Author

ASPECTS OF THE BIOGEOCHEMISTRY OF BIG SODA LAKE, NEVADA
R. S. OREMLAND, R. L. SMITH, and C. W. CULBERTSON (USGS, Menlo Park, CA) IN: Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 . New York, Van Nostrand Reinhold Co., 1985, p. 81-88. refs

Characteristics of Big Soda Lake, NV, including its pelagic productivity, rates of anaerobic mineralization (sulfate reduction, methane oxidation and methanogenesis), inorganic chemistry, seasonality, and littoral-zone processes, are presented on the basis of results from ongoing studies begun in 1980. The chemical analysis showed high S (5600 mg/l) and low Fe (less than 0.1 mg/l) contents. Annual water column productivity was found to be 500 gC/sq m, of which 60 percent is due to phytoplankton; 10 percent to purple photosynthetic bacteria, Ectothiorhodospira vacuolata (at a depth of 21 m); and 30 percent to bacterial chemocutotropy occurring within the photosynthetic bacterial plate. The methanogenic activity was maximal at pH 9.7 (the pH of the Big Soda Lake waters) and was found to be supported noncompetitively by methanol, methylamines, and methionine (but not by H2, acetate, or formate). No detectable N2 fixation or denitrification was found in water columns of the upper 30 m, although in the littoral zone an N-fixing cyanobacterium colonizes the plant (Ruppia sp.) beds in midsummer. Extremely thermophilic anaerobic archaebacteria have been isolated from submarine solfatara fields in Italy. They are sulfur-hydrogen autotrophs, sulfur respirers, methanogens, and fermentative organisms. The most extremely thermophilic isolates grow between 80 and 110 C, with an optimum around 105 C. INCREASED GLUCONEOGENESIS IN RATS EXPOSED TO HYPER-G STRESS
B. C. DALIGCON, J. OYAMA, and K. HANNAK (NASA, Ames Research Center, Moffett Field, CA) Life Sciences (ISSN 0024-3205), vol. 37, no. 3, 1985, p. 235-241. refs

The effect of glucogenesis on the plasma glucose and liver glycogen of rats exposed to hyper-G stress is investigated. Twelve male Sprague-Dawley rats are injected with C-14 lactate, alanine, of glycerol, and six of the rats are exposed to 3.1 G for 0.25, 0.50, and 1.0 hr. The plasma glucose and liver glycogen of the centrifuged and noncentrifuged rats are analyzed. A significant increase in the C-14 incorporation of the substrate into the plasma glucose and liver glycogen is observed in the centrifuged rats. The injection of 5-methoxyindole-2-carboxylic acid, a gluconeogenesis inhibitor, results in a blocked increase in plasma glucose and liver glycogen. The role of epinephrine on the hyperglycemic and liver glycogen responses of centrifuged rats is studied. It is concluded that the initial increase in plasma glucose and liver glycogen in rats exposed to hyper-G stress is the result of an increased rate of gluconeogenesis. I.F.

VISUAL PERCEPTION AND MEMORY: INFORMATION PROCESSES AND NEURON MECHANISMS [ZRITEL'NOE VOSPRIIATIE I PAMIAT': INFORMATSIONNYE PROTSESSY I NEIRONNYE MEKHANIZMY]
K. N. DUDKIN Leningrad, Izdatel'stvo Nauka, 1985, 208 p. In Russian. refs

The process of visual perception (VP) is based on sensorial information, but cannot take place without the participation of memory. The physiological mechanisms involved in three types of visual memory (iconic, short-term, and long-term memory) and their role in VP is examined. Theories of detector-mediated VP (through detectors of edge, contour, brightness, and other features of the object) and spatial frequency filtering are discussed, and results of psychophysical, electrophysiological, and behavioral experiments are presented in support of the theoretical models. It is concluded that the concepts of spatial frequency filters and features detectors supplement each other and must be both invoked to explain the experimental observations. I.S.

EFFECT OF FASTING ON HYPOXIA TOLERANCE OF MICE IN RELATION TO OXYGEN CONSUMPTION AND HEART RATE
T. SUZUKI (Tokyo, University, Japan) and C. WATANABE Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1198-1202. refs

Mice more than 8 weeks old were fasted for 1 or 2 d and challenged by severe acute hypoxia. The hypoxia survival times (ST) were compared to the body weight, oxygen consumption, or heart rate (HR) of each animal. The duration of fasting was found to be important in determining ST. Oxygen consumption or HR was negatively correlated with ST, whether mice were fasted or not. The regression line (lnST on HR) in the fed (control) group did not significantly differ from that of 2-d fasted groups, but those of fed and 1-d fasted groups differed. These results suggest that, in fasting for 2 d, the reduction in energy consumption was a major determining factor of hypoxia survival; in 1-d fasting, other factors might operate to determine the tolerance. FURTHER STUDIES ON THE APPLICATION OF THE COMPARTMENTALIZATION/AIRLOCK CONCEPT TO AIRCRAFT AND SPACECRAFT
H. S. FANG, M. L. TSAI, and I. T. LEA (National Taiwan University, Taipei, Republic of China) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1209-1212. Sponsorship: National Science Council of the Republic of China. refs
(Contract NSC-72-0412-B002-22)

The effect of the application of the compartmentalization/airlock on accidental decompression was studied in conscious rats, mice, and guinea pigs. It was observed that in unprotected rats and mice, 78 of 102 middle ears (76.5 percent) exhibited hemorrhages with their eardrums intact; and in unprotected guinea pigs, 37 of 50 eardrums (74 percent) revealed rupture associated with hemorrhages of all middle ears (100 percent). Seven cases of malleus fractures (14 percent) were also found in unprotected guinea pigs. On the other hand, none of the protected animals showed signs of middle ear barotrauma. The protective effect on the tolerance of middle ears in the present study showed the same tendency as that on the tolerance of lungs in a previous study. These findings indicate that the application of the compartmentalization/airlock would be of great value in protection against accidental rapid decompression of pressurized aircraft and spacecraft. The recording and subsequent analysis of evoked potential activity has proven useful for the evaluation of neutral dysfunction resulting from impact acceleration injury involving the head and neck. In animal impact acceleration experiments involving Rhesus monkeys, somatosensory evoked potentials showed an increase in latency following nonlethal experiments. In order to assess quantitatively and objectively the amplitude and duration of the latency effect following impact acceleration, a nonlinear mathematical model has been proposed. This technical report describes a nonlinear regression procedure for fitting the proposed model directly to empirical latency data. A FORTRAN computer program listing is provided. Author (GRA)

West Germany is one of the leading countries in Europe for research in biomaterials. Researchers have developed a number of new techniques and methods utilizing a wide range of synthetic and natural materials for use in medicine. Exotic ceramics, metals, and plastics are being used both in animals and in humans for such things as tissue repair, wound coverings, drug delivery, and prostheses. The West German scientists, bioengineers, and clinicians are very aggressive in attacking new problems related to the use of biomaterials in therapy. GRA

This work details the conditions necessary to achieve routinely the complete photoactivation of virtually totally inactive water oxidizing complexes in NH2OH extracted leaf segments. The photoactivation process per se proved entirely similar to the process previously described for Mn deficient algae, Mn sufficient algae cultured heterotrophically, and NH2OH extracted algae. Further studies showed that without dark preincubation of NH2OH extracted leaf segments PS 2, but not PS 1, was susceptible to weak light photoinhibition (t1/2 approx. 2.5 min). Also reported are studies which kinetically characterize the photoinhibition process using NH2OH or Tris extracted isolated chloroplasts, prove the site affected resides on the oxidant side of PS 2, and give preliminary identification of the polypeptide which must be synthesized on chloroplast 70S ribosomes for the recovery from photoinhibition and for recovery of the capacity of PS 2 to carry-out photoactivation of the Mn-S-state enzyme. QUANTITATIVE MODELS DESCRIBING THE KINETICS OF TUMOR CELL PROLIFERATION: A COMPARISON TO EXPERIMENTAL DATA
J. ATEN (Amsterdam Univ.) and J. GRASMAN Dec. 1984 9 p refs
(CWI-AM-R8418; B8565125; AD-B093143L) Avail: NTIS HC A02/MF A01

Pedigrees of cells from a mouse osteosarcoma line are analyzed. The generation time data of cells of 12 pedigrees is used to estimate the parameters in two transition probability models of the cell cycle. In cultures perturbed by a change of culture medium, generation times are shorter than in control cultures. In the control cultures, seven cells with anomalously large division delays were deleted in the process of estimating the parameters in the transition probability models. In the data of pedigrees of irradiated cells such cases occur more frequently. This is a strong indication that a quiescent state must be introduced in the model of the cell cycle and that a delay due to DNA repair must be taken into account. In a test of the model of Brooks, Bennett and Smith (1980) the data of sister-sister correlations contained the necessary information to reject this model for cells a mouse osteosarcoma line. RADIOSENSITIVITY OF ANIMALS IRRADIATED IN MODIFIED GAS MEDIUM: MODIFICATION OF CEREBRAL SYNDROME IN MICE BY HYPOXIC HYPOXIA AND HYPEROXIA DURING IRRADIATION
I. B. USHAKOV and M. M. ABRAMOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-85-004) p 110-115 29 Jan. 1985 Transl. into ENGLISH from Radiobiologiya (Moscow), v. 24, no. 5, Sep.-Oct. 1984 p 693-697
Avail: NTIS HC A06

The effect of breathing pure normobaric oxygen on the radiosensitivity of hemopoietic tissue and the small intestine was studied previously. The possible modifying action of hyperoxia and hypoxic gas mixtures (HGM) on the course of the cerebral syndrome was evaluated. Thus the authors who studied rabbits that succumbed to radiation, diagnosed a higher oxygen demand in the irradiated animals and recommended the use of oxygen therapy in X-ray treatment of head tumors. Irradiation of the heads of mice with 8 meV electrons in doses greater than 350 Gr produced what the authors believe to be a paradoxical result: Pure normobaric oxygen had a protective effect, as is true for anoxia, though the effect was significantly less pronounced. Presence of an oxygen effect (aggraviation by oxygen and protection by HGM) was demonstrated with radiation doses of 0.052-0.258 KI (expansion unknown)/kg and 47-123 Gr 6. In the latter case, however, the modifying effect was absent with radiation doses of 123-213.8 Gr. This paper evaluates possible modification of the cerebral syndrome in mice by a modified gas medium during gamma-irradiation of the head and torso. B.W.

ROENTGENOLOGICAL AND PATHOMORPHOLOGICAL CHANGES IN HEART OF DOGS SUBMITTED TO HYPOKINESIA FOR SIX MONTHS
I. G. KRASNYKH, N. A. GAYDAMAKIN, and V. G. PETRUKHIN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 54-59 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 41-46
Avail: NTIS HC A07

The effect of 6-month hypokinesia on the cardiac function and pathomorphological changes in dogs was investigated. The heart size during systolic and diastolic contractions, stroke volume and contractile function were measured once a month using an X-ray unit and a kymograph. After the hypokinetic exposure six dogs were sacrificed and their hearts were examined morphologically and histochemically. The recovery processes were investigated on two other dogs that were allowed to survive for 30 days after exposure. The 6-month hypokinesia led to a significant decrease in the heart size, stroke volume, cardiac index and the contractile function. Morphological examinations revealed atrophic changes in the myocardium. Electron-microscopy investigations demonstrated focal destructive changes in myofibers and in mitochondria, some of them were dense while others had a more transparent matrix and degraded cristae. Histochemical data also suggest atrophic and destructive changes in the myocardium.

CHANGES IN PHYSICAL CONDITION, VESTIBULAR FUNCTION AND BONE SYSTEM OF RATS SUBMITTED TO LONG-TERM ROTATION
A. A. SHIPOV, V. N. SHVETS, L. A. TABAKOVA, and O. Y. KABITSKAYA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 60-69 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 46-53
Avail: NTIS HC A07

Unrestrained rats were rotated for 21 and 30 days at 1.1 and 2.0 G. The exposure did not deteriorate their equilibrium function or physical condition, however, the exposure decreased the reactivity and sensitivity of the semicircular canals. Bone parameters, longitudinal and transverse bone growth, metaepiphysis morphometry, indicated that the rats developed an acute stress reaction accompanied by an inhibited growth of limb bones during the first 7 days of rotation. By experimental day 30 the animals became adapted to the new environment. E.A.K.

CONTRACTILE PROPERTIES OF RAT MUSCLE FIBERS DURING LONG-TERM EXPOSURE TO +2 GX ACCELERATIONS
V. S. OGANOV, S. A. SHURATOVA, and M. A. SHIRVINSKAYA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 70-74 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 53-56
Avail: NTIS HC A07

The effect of 21-day exposure to +2 Gx and +1.1 Gx on the contractile properties of different muscle groups of rate fore- and hindlimbs was examined, using glycerinated myofibers in the ATP+Ca sq solution. It was found that the isometric contraction strength and velocity increased, the performance of the postural extensors also grew; that of the soleus m. in the +2 Gx rats and that of the triceps brachii m. in the +2 Gx and +1.1 Gx rats. The contractile changes of the flexors of fore- and hindlambs were insignificant and sometimes oppositely directed. The different responses of the muscles to acceleration were associated with the differences in their function, metabolism and biomechanics.

DRUGS AND SURFACTANTS USED TO PREVENT CAISSON DISEASE IN RATS
V. V. VLASOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 123-126 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 86-87
Avail: NTIS HC A07

Changes in the blood-clotting system and vascular reactions have a substantial effect on rate of gas production, rate of escape of gas through the lungs, size of bubbles and their stability in development of decompression sickness. These reactions are an important factor that determines tolerance to decompression. By altering the body's reaction to the free gas phase that appears in

tissues one can deliberately influence tolerance to decompression. Drugs medication capable of enhancing tolerance to decompression were investigated and the effects of some surfactants (SF) on the course of caisson disease are examined. E.A.K.

Avail: NTIS HC A07

A 30-day restriction of motor activity of animals against the background of diets differing in calcium and phosphorus content led to decline of amino acid pool of blood, and excessive uptake of phosphorus aggravated the effect of hypokinesia. The effect of 24,25-dihydroxycholecalciferol--24,25(OH0 2D3 -- on amino acid metabolism of animals, are discussed and the use of this compound together with other agents for prevention and treatment of mineral metabolism under hypokinetic conditions is outlined. The possibility of normalizing amino acid metabolism under hypokinetic conditions with use of diets with a specific proportion of calcium and phosphorus and supplemental administration to animals of an active metabolite of vitamin D3--24,25(OH)2D3 is explored. BIOCIDAL SYNTHETIC COATINGS BASED ON HIGH-MOLECULAR METALOORGANIC COMPOUNDS
V. F. MISHCHENKO, V. A. ZUBOV, and Y. G. YEREMENKO *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 130-134 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 89-92
Avail: NTIS HC A07

Long-term stays of man and animals in closed life-support systems lead to contamination of the room and objects in it by various microorganisms. Traditional sterilization methods was found to be either ineffective or extremely difficult and unsafe. Use of biologically active paint and varnish is an effective means of preventing development of microorganisms in closed life-support systems when they contain as biocidal supplements low-molecular organic compounds, organic derivatives of arsenic, mercury and copper. However, these materials are often highly toxic for man and animals. The low-molecular compounds used as biocidal additives in paint and varnish do not yield the desired result, since this biocidal agents usually do not have a broad spectrum of protective action. Due to constant exudation, the biocidal agents are utilized unwisely, which ultimately leads to reduction of efficacy and duration of protective action of the coating. E.A.K.

POTENCY OF PHOTOFLASH-PRODUCED RETROGRADE AMNESIA IN RATS Final Technical Paper, Dec. 1983 - Mar. 1984
K. R. PAGE and T. G. WHEELER Jul. 1985 12 p
(Contract AF PROJ. 7757)
(AD-A159149; USAFSAM-TP-85-1) Avail: NTIS HC A02/MF A01 CSCL 05I

A photoflash has been shown to be an effective amnesiac under certain conditions. The objective of this study was to evaluate the effectiveness of a photoflash in relation to the potency of the preceding event, a foot shock of varying intensities. The task was a single avoidance-trial paradigm. The subject was placed in a small aversive chamber with a door that allowed the subject to enter a large, preferred chamber. Once inside the preferred chamber, the subject received a 1-s foot shock followed by a photoflash. On the avoidance trail, the subject was again placed in the aversive chamber and the time required to enter the preferred chamber was measured. If the photoflash had produced retrograde amnesia (RA), the time required to enter would be small. Retrograde amnesia was demonstrated for the 80-, 85-, and 100-V foot-shock test trials. At 40 V the voltage may not have been great enough to be felt by the subject. For groups examined at shock levels above 100 V, the foot shock was so potent that a photoflash was ineffective in producing RA. Our conclusion was that the photoflash was an effective amnesiac until the intensity of the foot shock became more potent than the photoflash; this is consistent with the recency theory generated in serial learning and memory tasks. Our pulse-conductivity studies of electrons in nonpolar liquids and reversed-micellar solutions in which electron mobilitis, (MU) sub e 's, that range from 10 to the power -3 to 1000 sq cm/Vs and electron-attachment rate constants, k sub e 's, that range from 10 to the 8th power to 10 to the 14th power MM to the - 1 s to the - 1 will be briefly described as well as the mechanisms of electron transport and attachment that are consistent with this millionfold range of (MU) sub e's and k sub e 's. Included among the electron-attachment results presented will be the K sub e's of 150 chemicals that have been classified using animal tests as being carcinogens or noncarcinogens. The k sub e-carcinogenicity correlation will be compared with the bacterial mutagenicity-carcinogenicity correlation which is the basis of the Ames Salmonella bioassay, the short-term test that is most widely used to screen potentially carcinogenic chemicals. Finally, our use of the Ames Salmonella tester strains as a biological detector of electrophilic carcinogens will be discussed. DOE

It can be calculated that a living cell will survive more than 5000 years at -196 C. This ability to essentially stop biological time has important implications in medicine and agriculture, and in biological research. In medicine the chief implications are in the banking of transplantable tissues and organs and in vitro fertilization. In agriculture the applications stem in part from the role of frozen embryos in amplifying the number of calves produced by high quality cows. The problem is how can cells survive both the cooling to such very low temperatures and the return to normal temperatures. The answers involve fundamental characteristics of

cells such as the permeability of their surface membranes to water and solutes. These characteristics determine whether or not cells undergo lethal internal ice formation and other response during freezing and thawing. DOE

INVESTIGATIONS OF THE EFFECTS OF GRAVITY ON PARAMECIUM CAUDATUM STRUCTURE AND BEHAVIOR Thesis - Bonn Univ.
R. HEMMERSBACH Jul. 1985 70 p refs In GERMAN; ENGLISH summary Report will also announced as translation (ESA-TT-963)
(DFVLR-FB-85-40; ISSN-0171-1342) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 27

Paramecium caudatum was used to study the behavior of the contractile vacuolar system, the nutrient uptake, cyclose, multiplication rate, and ultrastructure under simulated weightlessness using a fast-running clinostat and a modified agar method. In comparing 0 and 1 g behavior, no modification is detected, except for the vacuolar system. The slowed and irregular functioning behavior of the contractile vacuolar system due to an inner timing modification is influenced by gravity. Negative geotaxis of Paramecium caudatum is not confirmed. The effects of gravity on vacuole formation, situation, and number cannot be determined. Author (ESA)

ON THE EFFECTS OF X IRRADIATION ON THE BACILLUS SUBTILIS SPORES IN A DAY AND WET SYSTEM Thesis - Fachhochschule, Giessen, West Germany
E. WOIZENKO Apr. 1985 82 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-968)
(DFVLR-FB-85-44; ISSN-0171-1342) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 29

Bacillus subtilis spores were irradiated to study the influence of intracellular water and to explain the modulating role of water in the development of biological radiation damage. The effects of repair deficiency in mutants regarding sensitivity to radiation in dry and wet systems were studied to explain the damage process in correlation with cell water content. The experiments were verified in multiplication rate and lag phase curves. Wild and mutant species are more sensible to ionizing radiation in a dry medium than in a wet medium. The water content used as a radiation protective substance reduces inactivation. Rec+ species (wild species) is more sensitive to ionizing radiation under extremely dry conditions and in a vacuum than Rec- species (mutants) due to a reduced repair ability. Rec- species deficient in the Rec A gene develop other repair processes to compensate for damage. The results show the variety of the cell repair processes. Author (ESA)

INTENSITY OF LIPID PEROXIDATION IN HYPOKINETIC RAT TISSUES
T. Y. SHIDLOVSKAYA *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 65-69 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 45-48
Avail: NTIS HC A08

The intensity of lipid peroxidation in the homogenates and mitochondria of the liver, heart and skeletal muscle of hypokinetic rats was measured. The primary products of lipid peroxidation, i.e., diene conjugates, were accumulated in all tissues on hypokinesia days 3, 15 and 30. The content of the final product--malonic dialdehyde--in the mitochondria increased on hypokinesia days 15 and 30. The low level of NADPH, an ascrobate-dependent lipid peroxidation, in the mitochondria at early stages of hypokinesia (up to 15 days) and diene conjugates in homogenates on hypokinesia day 7 can be attributed to an activation of the protective systems of the organism against the immobilization stress. It is suggested that at early stages of hypokinesia the process of lipid peroxidation, or to be more precise, lipid hydroperoxidation can be blocked. Author

The experiments were carried out on Wistar SPF rats that were immobilized for 35 days. By heterotopic marrow cell transplantation under the kidney capsule to the normal rates and by cloning these cells in vitro it was found that osteogenetic potentials were significantly inhibited and the amount of osteogenetic precursor cells was reduced. The addition of 24,25(OH)2D3 vitamin (at a dose of 1.25 micrograms per day) to the animal die led to the normalization of the above parameters. It is assumed that immobilization-associated osteoporosis develops via, among other mechanisms, inhibition of histogenesis of stromal precursor cells. The beneficial role of vitamin D3 is actually the activation of histogenesis of these cells which results in the recovery of bone remodelling during immobilization. Author

Rats housed as a group per cage were centrifuged for 21 and 30 days at 1.1. and 2.0 G. The following parameters were measured: (1) motor activity, body mass, static and dynamic endurance, acceleration (+Gz) tolerance, vestibular function, equilibrium function, skeletal muscle contractility, bone dynamics, gas exchange, blood biochemistry, weight of adrenals, thymus and thyroid gland; (2) morphology of adrenals, thyroid gland, and cortex of the cerebellum nodulus; and (3) biochemistry of blood hormones, energy metabolism enzymes in the liver, bone phosphatase, myosin Ca-Mg-ATPase in the myocardium, protein sulfhydryl groups in the cerebellar motor cortex. It was demonstrated that prolonged (1/50 of their life time) centrifugation of unrestrained rats causes no deterioration of many physiological functions, i.e., rotation produces no adverse effects on the animal body. Avail: NTIS HC A08

This paper presents the results of a microbiological experiment carried out by the Soviet and GDR scientists onboard SALYUT-6. The experiment was performed using a Bacillus subtilis suspension in the Jena unit. The purpose of the experiment was to study the time-course variations of the cell biomass increase in zero-g. The cell culture development was measured with respect to the utilization rate of glucose or casein hydrolysate in the nutrient medium and the rate of protein accumulation in cells. It has been shown that the rate of biomass increment in zero-g lags behind the 1 g level. It can be concluded that the decreased metabolic activity of bacterial cells in zero-g is associated with changes in the cell population distribution and physiochemical parameters of the nutrient medium. INVESTIGATION OF MICROFLORA OF CHUFA, A POTENTIAL HIGHER PLANT COMPONENT OF BIOLOGICAL LIFE-SUPPORT SYSTEMS FOR MAN
L. S. YUNUSOVA and N. A. DRUGOVA *In its* USSR Report: Space Biology and Aerospace Medicine Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 96-100 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 65-68
Avail: NTIS HC A08

The microbiological characteristics of the chufa plant grown alone or in combination with wheat and vegetables were investigated. The results showed that the bacterial flora of chufa plants did not change significantly. The bacterial count decreased during nodule formation. The number of actinomycetes increased when chufa and wheat plants were grown together. By the end of vegetation fungi were accumulated in the chufa rhizosphere. Among the physiological groups involved in the transformation of nitrogen-containing compounds ammonifiers were predominant. At the germination stage ammonification and denitrification processes increased, cellulose-decomposing bacteria appeared, oligonitrophilic forms occurred. From the microbiological point of view chufa plants can be used in the higher plant component of the biological life support system. Author

INVESTIGATION OF DISTINCTIONS REFERABLE TO GROWTH, DEVELOPMENT AND METABOLISM OF CLOSTERIOPSIS ACICULARIS ALGAE WHEN CELLS ARE LIMITED IN NITROGEN AS RELATED TO BIOLOGICAL LIFE-SUPPORT SYSTEMS FOR MAN
A. A. ANTONYAN, M. A. LEVINSKIKH, and N. I. SUKHOVA *In its* USSR Report: Space Biology and Aerospace Medicine Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 101-108 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 69-73
Avail: NTIS HC A08

The growth, development and metabolism of a new form of green unicellular algae Closteriopsis acicularis were investigated from the point of view of their potential use in the biological life support system (BLSS). Their growth and biochemical characteristics were studied as a function of nitrogen supply. During the nitrogen-deficiency cultivation the growth rate remained unchanged, cell division and biomass increment was uncoupled, and carbohydrate formation was predominant. The content of carbohydrates increased at the expense of assimilable fractions, particularly starch. These data can be used in the selection of an optimum nitrogen level for the case of algal continuous cultivation, in the development of diets that can be provided by a BLSS incorporating Closteriopsis acicularis. INVESTIGATION OF MINERAL NUTRITION OF A NEW, FORM OF MICROALGAE TO BE USED IN BIOLOGICAL LIFE-SUPPORT SYSTEMS
M. A. LEVINSKIKH and O. G. LIVANSKAYA *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 149-151 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 95-96
Avail: NTIS HC A08

Closteriopsis acicularis var. africana Hind unicellular green algae attracted the attention of researchers because, unlike Chlorella, it has a readily broken down cell membrane and, according to preliminary data, its biomass contains considerable amounts of readily assimilated carbohydrates. It is felt that inclusion of this alga in the photoautotrophic part of a biological life-support system (BLSS) for man could optimize its features considerably. One of the main questions in studying unicellular algae as applied to human BLSS is their biogenic element requirements. Such knowledge is necessary in order to provide optimum mineral nutrition for algae and high productivity, but mainly to maintain these conditions on a specific level during continuous cultivation in the mode of medium recirculation, which requires constant replenishment of biogenic elements in strict accordance with their removal with the collected harvest. Data was obtained on biogenic element requirements of algae during accumulating cultivation under different cultivation conditions. B.W.

ADVANCES IN RADIOBIOLOGICAL RESEARCH: HYPOXIC IRRADIATION EFFECTS
A. M. DANCEWICZ and M. M. JELENSKA *In its* East Europe Report: Science and Technology (JPRS-ESA-85-031) p 7-13 9 Oct. 1985 refs Transl. into ENGLISH from Nukleonika (Warsaw, Poland), no. 7-8, 1982 p 377-386
Avail: NTIS HC A04/MF A01

The effect of hypoxic conditions during irradiation of rats with 9.0 Gy dose of X-rays determined in lung homogenate concentration of DNA, protein and collagen and the activity of cathepsin, beta-glucuronidase, acid phosphatase and plasminogen activator was studied. It was found that regardless of hypoxic conditions of irradiation, collagen content in rat lungs was increased with time after exposure. Thypoxic conditions resulted in partial decrease during later periods after exposure to other biochemical indices of irradiation. It is evident in the case of the fibrinolytic activity which in hypoxic rats is increased during first several days while in rats irradiated under normal conditions this increase persist for more than 1 year after exposure. E.A.K.

HYPOXIC AND HYPERCAPNIC SENSITIVITY AS A REFLECTION OF INDIVIDUAL HUMAN REACTIVITY [CHUVSTVITEL'NOST' K GIPOKSICHESKOMU I GIPERKAPNICHESKOMU STIMULU KAK OTRAZHENIE INDIVIDUAL'NOI REAKTIVNOSTI ORGANIZMA CHELOVEKA]
T. V. SEREBROVSKAIA (AN USSR, Institut Fiziologii, Kiev, Ukrainian SSR) Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia (ISSN 0031-2991), Sept.-Oct. 1985, p. 65-69. In Russian. refs

Examinations of 64 boys aged 15 to 17 years showed that individuals having a lower threshold sensitivity to a hypercapnic stimulus and a larger ventilatory response also exhibited higher levels of ventilation and gas exchange at rest. The reaction of the respiratory system to a hypoxic gas mixture at an altitude of 3000 m was also found to be greater in individuals displaying high hypercapnic sensitivity. In addition, hypercapnic sensitivity was positively correlated with muscular exertion, skin sensitivity, and nervous mobility at high altitude. Correlative connections between hypoxic sensitivity and the above reactivity parameters were less marked. It is concluded that sensitivity to a hypercapnic stimulus, being a genetically fixed trait, can be used as a criterion for evaluating the individual reactivity of an organism. I.H.

PRECISION AND ACCURACY OF OCULOCENTRIC DIRECTION FOR TARGETS OF DIFFERENT LUMINANCES
H. E. BEDELL, M. H. JOHNSON, and R. BARBEITO (Houston, University, TX) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 2, Aug. 1985, p. 135-140. refs
(Contract NIH-EY-03694)

The precision and accuracy of specifying oculocentric directions were assessed by successively partitioning an 8.3 deg space in the right field into a series of perceptually equal fractional spaces and then matching each partitioning target's direction in the left field. Three observers performed this task for four target luminances, ranging from 0.04 to 43 cd/sq m. The results show that luminance has virtually no effect on either the precision or accuracy of spatial partitioning; essentially no effect was obtained even when, for one observer, target luminance was reduced to nearly the absolute threshold. These data are interpreted in terms of the role of oculocentric direction in mediating visual behaviors. Author

THE EFFECT OF +GZ ACCELERATION ON CARDIAC VOLUMES DETERMINED BY TWO-DIMENSIONAL ECHOCARDIOGRAPHY
T. JENNINGS (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH), J. SEAWORTH, D. RATINO, L. TRIPP, L. HOWELL (USAF, Wright-Patterson Medical Center, Wright-Patterson AFB, OH) et al. SAFE Journal, vol. 15, Winter 1985, p. 4-9. refs

A 3.5 MHz transducer and a real-time, two-dimensional scanner are used to record four-chamber apical echocardiographs before, during, and after exposure to +Gz acceleration. Seven subjects were exposed to two acceleration profiles, +Gz ramp with a +1 Gz/10 second onset rate, and +3 Gz for 3 minutes, with and without G-suit inflation. Graphs displaying the hemodynamic changes for the two test conditions are presented. In both test conditions the heart position remains unchanged. At +1 Gz acceleration in the uninflated G-suit a decrease in end-diastolic volume and stroke volume is observed. The inflated G-suit countered this hemodynamic change; however, after 30 sec of +3 Gz acceleration the protective effect of the suit is no longer detected. I.F.

INFLIGHT LOSS OF CONSCIOUSNESS. II
D. C. JOHANSON (U.S. Naval Weapons Center, China Lake, CA) SAFE Journal, vol. 15, Winter 1985, p. 24-27. refs

An aviator's physiological responses to acceleration, which include cardiovascular reflexes maintaining sufficient blood flow, visual impairment, and loss of consciousness, are described; a graph depicting these responses is provided. The training of an aviator, by exposure, to handle the problems of acceleration is examined; the advantages and disadvantages of using an aircraft or a centrifuge are discussed. Centrifuge training permits the determination of a resting tolerance, multiple exposure, videotaping of training, and biofeedback; it proves to be more beneficial than actual aircraft exposure. I.F.

A86-18831
ADDITIONAL PRESSURISATION FOR TREATING NONRESPONDING CASES OF SERIOUS AIR DECOMPRESSION SICKNESS
D. R. LEITCH and R. D. GREEN (Institute of Naval Medicine, Gosport, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1139-1143. refs

Twenty years of decompression sickness (DCS) treatment records are reviewed in order to assess the treatment value of additional oxygen compression to 50 m (6.0 bar) or higher for cases which failed to respond satisfactorily to standard 5-h treatment of oxygen breathing at 18 m (2.8 bar). For cases with continuing strong symptoms of DCS, further compression to 50 m did not alter recovery. Similarly, compression beyond 50 m (to as deep as 76 m) failed to provide a benefit. Hemorrhage, thrombosis, or edema are suspected to be the cause of continuing deterioration in the nonresponding cases. Therefore, the need for maintenance of constant blood volume during hyperbaric oxygen treatment is emphasized. I.S.

A86-18832
THE DESENSITISATION OF CHRONICALLY MOTION SICK AIRCREW IN THE ROYAL AIR FORCE
M. BAGSHAW and J. R. R. STOTT (RAF, Institute of Aviation Medicine, Farnborough, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1144-1151. refs

The Royal Air Force Motion Sickness (MS) Desensitization Program (DP), in operation since 1966, consists of a ground phase (GPh) and an airborne phase (APh) of treatment. In the GPh, a vertical vibrating platform, operating at 0.3 Hz and 0.4 Hz, has been introduced in 1981 in addition to the standard cross-coupled, sinusoidal linear Gz and angular oscillation. In the APh of the DP, the basic jet trainer has been replaced by a Hunter T7 jet which allows a graded build-up of MS stimuli from straight flight to advanced aerobatics and high-speed, low-level navigation. Both changes have improved the overall success rate, with the flying phase shown to be the most important component of the treatment. Tolerance might be partially lost after a long break in flying, but is regained after a short period of the therapy, indicating that adaptation may be retained for longer periods than was previously suspected. ENDOCRINE CORRELATES OF SUSCEPTIBILITY TO MOTION SICKNESS
R. L. KOHL (NASA, Johnson Space Center; Universities Space Research Association, Houston, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1158-1165. refs

Motion sickness releases ACTH, epinerphrine, and norepinephrine. The endocrine responses to motion sickness, adaptive responses leading to the resolution of the syndrome, and the way in which antimotion-sickness drugs influence the endocrine responses were studied. Susceptible or insusceptible subjects were administered antimotion-sickness drugs prior to stressful stimulation. Insusceptible subjects displayed more pronounced elevations of ACTH, epinephrine, and norepinephrine after stressful motion. Predrug levels of ACTH were higher in insusceptible subjects (p less than 0.01). Acute blockade of hormone responses to stressful motion or alteration of levels of ACTH by drugs were not correlated with individual susceptibility. No correlation was apparent between epinephrine and ACTH release. These endocrine differences may represent neurochemical markers for susceptibility to motion, stress, or general adaptability, and it may be that the chronic modulation of their levels might be more effective in preventing motion sickness than the acute blockage or stimulation of specific receptors. PLASMA NOREPINEPHRINE, BLOOD PRESSURE AND HEART RATE RESPONSE TO GRADED CHANGE IN BODY POSITION
V. FIORICA (USVA, Medical Center, Muskogee; Tulsa Medical College, OK) and D. C. KEM (Oklahoma, University, Oklahoma City) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1166-1171. refs

The effect of either an abrupt orthostatic postural change (supine to stand) or a graded change in a head-up body position on a tilt table (0, 20, 40, and 80 deg) on the levels of systolic (SBP) and mean (MBP) blood pressure, the heart rate (HR), and plasma norepinephrine (NE) concentrations was studied on 44 human subjects aged 21-41. Neither postular maneuver caused a significant change in either SBP or MBP. On the other hand, both the HR and NE showed significant increases due to the orthostatic maneuver, and both of these parameters responded with linear proportionality to the increasing degree of tilt. A significant correlation between plasma NE and HR was observed during both positional change maneuvers (orthostatic, $r = 0.50$; graded tilt table, $r = 0.80$), indicating that in the conditions of postural change, plasma NE concentrations reflect the activation level of the sympathetic nervous system. I.S.

HEMODYNAMIC RESPONSES TO UPRIGHT TILT AT SEA LEVEL AND HIGH ALTITUDE
C. S. FULCO, A. CYMERMAN, P. B. ROCK, and G. FARESE (U.S. Army, Research Institute of Environmental Medicine, Natick, MA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1172-1176. refs

The effect of a head-up tilt (HUT) (13 min at 60 deg, following 16 min in the supine position) was studied in 8 men (age 21.6 yr) at sea level (SL); after 1 h at 4300 m simulated altitude; and at 18, 66, and 114 h during residence at 4300 m altitude (HA). Changes in heart rate (HR), stroke volume (SV), cardiac output (CO), calf blood flow (CBF), blood pressure (BP), total peripheral resistance (TPR), and plasma norepinephrine (NE) were measured to monitor the effects of positional and altitude changes. After transfer from the SL to HA, the supine values of HR, TPR, BP and NE were increased, while the values of SV, CO, and CBF were reduced. The HUT values of HR and mean BP have also increased after 18 h at HA, but the levels of other parameters measured in the HUT position showed little change from the SL values. Thus, with prolonged exposure to HA (66 to 114 h), the SV, CO, TPR, and CBF responses to tilt were reduced. I.S.

A86-18837
IMMERSION COOLING - EFFECT OF CLOTHING AND SKINFOLD THICKNESS
S. A. NUNNELEY (USAF, School of Aerospace Medicine, Brooks AFB, TX), E. H. WISSLER (Texas, University, Austin), and J. R. ALLAN (Institute of Aviation Medicine, Farnborough, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1177-1182. refs

Accidental immersion often involves the threat of death due to hypothermia. Clothing to control heat loss in water is generally selected to minimize bulk while providing the necessary protection. While water temperature, T(W), and possible immersion time are often considered, another relevant variable is the insulation provided by subcutaneous fat. This paper describes the use of a sophisticated computer model to explore the interactions among skinfold thickness (6-20 mm mean weighted value), clothing insulation (0.06-0.23 immersed), and T(W) (0-20 C), in producing critical hypothermia (arterial temperature equal to or less than 34 C). Results indicate that subcutaneous fat strongly affects heat loss even with heavy clothing. Discussion includes examples of the possible use of skinfold data to improve specification of protective clothing for groups and allow special clothing prescription for individuals. Author

EFFECTS OF PSYCHOTROPIC DRUGS ON THERMAL RESPONSES TO RADIOFREQUENCY RADIATION
J. R. JAUCHEM, M. R. FREI, and F. HEINMETS (Technology, Inc., Life Sciences Div.; Trinity University, San Antonio, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1183-1188. refs
(Contract F33615-80-C-0614)

The effect of chiorpromazine (C), amitriptyline (A), and haloperidol (H) on thermal responses in anesthetized rats during three cycles of exposure to 2.8 GHz radiofrequency radiation was investigated by measuring the time required for the colonic temperature to rise from 38.5 to 39.5 C (rise time) during the exposure and return to 38.5 C (recovery time) after exposure was discontinued. In comparison with the untreated and saline-treated animals, the rats injected with C (5 mg/kg) exhibited increased rise time during the radiation exposure and a faster recovery (decreased recovery time). Neither A (10 mg/kg) or H (0.1 mg/kg) affected thermal response. The results indicate that acute adminstration of C can counteract mild hyperthemia during intermittent exposure to radiofrequency radiation. I.S.

HYPOXIA-INDUCED VASOPRESSIN RELEASE AND COAGULOPATHY IN A NORMAL SUBJECT
M. ANDREW, H. OBRODOVICH, G. COATES (McMaster University, Hamilton, Canada), G. L. ROBERTSON (Chicago, University, IL), and G. W. GRAY (Defence and Civil Institute of Environmental Medicine, Downsview, Canada) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1220-1223. Sponsorship: Medical Research Council of Canada. refs
(Contract MRC-MA-7595)

This case report describes an apparently normal subject who developed marked qualitative and quantitative changes in all components of the factor VIII complex while inhaling an 11 percent oxygen/balance nitrogen gas mixture for 2 h. Blood from fresh venepunctures was drawn at baseline, during and after exposure to hypoxia for the following: a partial thromboplastin time, a prothrombin time, fibrin monomer, factor VIII:C, VIII procoagulant antigen (VIII:CAg); ristocetin cofactor activity (VIIIR:Co); VIII von Willebrand factor (VIII:vWF) multimer pattern; and arginine vasopressin. During hypoxia VIII:C, VIII:CAg, VIIIR:Ag and VIIIR:Co increased 4 to 5 fold; the VIII:vWF multimer pattern showed increasing low molecular weight complexes, fibrin monomer appeared and arginine vasopressin (AVP) levels increased from 5.5 pg/ml to 73.8 pg/ml. These changes are compatible with both the release of the VIIIR:Ag by AVP and protease induced fragmentation of the VIII complex. Author

WEARING CONTACT LENSES IN SPACE SHUTTLE OPERATIONS
L. G. HART Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1224, 1225. refs

More and more mission specialists are being trained to operate in the Space Shuttle and to eventually maintain a permanent station in space. Since up to 48 percent of the general population wears a visual correction of some sort, it is logical to assume that this percentage will also be found in the astronaut population. This paper proposes that the soft contact lens can be worn successfully in the space environment. The contact lens of choice is the continuous-wear soft contact lens which is proving to be quite successful for the general public. These lenses must be fitted at least 6 months before space flight in order to make sure they can be worn successfully. Author

HYGENIC ASPECTS OF REGULAR DIET OF FLIGHT PERSONNEL
I. G. POPOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 1-21 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 4-19
Avail: NTIS HC A07

The nutritional approaches to daily meals for the flying personnel while on the ground are discussed from a historical point of view. It is indicated that the nutrition requirements for the chemical composition of the daily diet are related to the physiological norms accepted by the food science in the USSR and other countries at various stages of its development. It is shown that the present-day diets for the flying personnel have a high caloric value. The basic physiological and nutritional requirements for the daily diets are given. E.A.K.

HUMAN BODY BIOMECHANICS AND MOVEMENTS AFTER 120-DAY ANTIORTHOSTATIC HYPOKINESIA
V. M. ZATSIORSKIY, M. G. SIROTA, B. I. PRILUTSKIY, L. M. RAYTSIN, V. N. SELUYANOV, and L. G. CHUGUNOVA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 27-32 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 23-27
Avail: NTIS HC A07

Data on body parameters (weight and circumference) and walking biomechanics after 120-day head-down tilt are presented. The exposure leads to changes in the antigravitational muscles which are assumed to be caused by relative changes in the fat and muscle components. Head-down tilt produces changes in the kinematic parameters of the walking process, the shape of support reactions, and losses in the walking efficiency. E.A.K.

FUNCTIONAL ACTIVITY OF HUMAN SEROTONINERGIC AND HISTAMINERGIC SYSTEMS DURING LONG-TERM ANTIORTHOSTATIC HYPOKINESIA
N. A. DAVYDOVA, Y. Y. GALKINA, and A. S. USHAKOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 33-37 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 27-30
Avail: NTIS HC A07

The functional activity of serotonin and histaminergic systems was investigated during 120-day head-down tilt. Serotonin excretion was increased until test day 70 and histamine excretion throughout the entire study. At the final stage of exposure the serotonin content decreased. Return to the normal motor activity stimulated the function of serotonin and histaminergic systems. E.A.K.

BODY POSITION DURING HYPOKINESIA, AND FLUID-ELECTROLYTE METABOLISM
V. B. NOSKOV, G. I. KOZYREVSKAYA, B. V. MORUKOV, Y. M. ARTAMASOVA, and L. A. RUSTAMYAN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 38-43 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 31-34
Avail: NTIS HC A07

Two groups of five healthy volunteers each were exposed for 7 days to: (1) group 1 to horizontal bed rest and (2) group 2 to head-down tilt at -6 deg. The effect of body position on fluid-electrolyte metabolism and renal function was determined. During the control period, bed rest and the recovery period the consumption f fluids and mineral substances and their renal

excretion were measured. The typical changes in fluid-electrolyte metabolism during head-down tilt developed faster than during horizontal bed rest. The fluid-electrolyte balance became negative in the course of the exposure and returned to normal during the recovery period. The group 2 subjects showed greater body weight losses due to both fluid and muscle mass losses. E.A.K.

MICROCIRCULATION AND CELLULAR HEMOSTASIS IN MEN WITH BORDERLINE ARTERIAL HYPERTENSION SUBMITTED TO NEUTRAL-TEMPERATURE DRY IMMERSION IN WATER
L. L. KIRICHENKO, V. V. SMIRNOV, and A. G. YEVDOKIMOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 44-49 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 35-38
Avail: NTIS HC A07

Platelet hemostasis, microcirculation, blood viscosity and lipid metabolism were examined in 18 men with borderline hypertension and 8 healthy men before, during and after 7-day immersion. The exposure to thermoneutral dry water immersion produced hypercoagulopathic changes of platelet hemostasis in the healthy and hypertensive subjects. Platelet hemostasis returned to the pretest level in the subjects in 2 days and in the hypertensive subjects in 5 days after exposure. Prior to immersion the hypertensive subjects showed signs of capillarotrophic insufficiency which increased after exposure. On immersion day 3 the hypertensive subjects exhibited a higher blood viscosity and a larger content of total lipids and free fatty acids. E.A.K.

EFFECT OF POSITIVE PRESSURE BREATHING ON HEMODYNAMICS IN PATIENTS WITH BORDERLINE HYPERTENSION SUBMITTED TO WATER IMMERSION
V. N. ORLOV, I. O. FOMIN, A. E. RADZEVICH, and G. S. LESKIN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 50-53 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 39-41
Avail: NTIS HC A07

Patients with borderline hypertension were exposed, during immersion, to positive pressure breathing. During exposure cardiac output (CO), heart rate (HR), mean arterial pressure (MAP), total peripheral resistance (TPR), left ventricle work (W), blood content of head vessels (Qh), upper and lower lung lobes (Qul and Qll), liver (Ql) were measured. During immersion, CO and MAP decreased, HR and TPR increased slightly, and W diminished. Simultaneously, Qh, Qul and Qll increased significantly while Ql decreased considerably, indicating blood centralization during simulated microgravity. Courses of positive pressure breathing led to decreases in Qh, Qul, Qll and increase in Ql, i.e., they caused blood to be displaced from the head and lungs to the liver. It is concluded that the liver plays the role of a physiological pool which accumulates blood removed from the upper body by positive pressure. E.A.K.

HEMODYNAMIC PARAMETERS AS RELATED TO DIFFERENT TOLERANCE TO HEAD-PELVIS ACCELERATIONS
N. I. KOKOVA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 75-80 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 56-60
Avail: NTIS HC A07

Hemodynamic parameters in the subjects with various resistance to +Gz acceleration were investigated. The acceleration value was increased slowly. During centrifugation ECG, systolic pressure in the ear lobe, stroke volume and cardiac output were measured. In the resistant subjects stroke volume remained stable and cardiac output was close to or higher than the initial level. In the nonresistant subjects both parameters decreased although their heartrate was significantly higher than in the resistant subjects. Various visual disorders developed when cardiac output decreased by 50 to 70% as compared to the initial level. It is concluded that in the nonresistant peopel the compensatory mechanisms responsible for the stability of cardiac output include primarily HR increase, whereas in the resistant people they involve a high level of venous return and stroke volume. E.A.K.

CHANGES IN PHYSICOCHEMICAL PROPERTIES OF CONTRACTILE AND REGULATORY PROTEINS IN DIFFERENT TYPES OF MUSCLES DURING AND AFTER EXPOSURE TO ACCELERATIONS
B. A. TIKUNOV, M. A. KAYFADZHYAN, and S. S. OGANESYAN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 81-86 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 60-64
Avail: NTIS HC A07

After 15-day exposure to +5 Gx the rate of superprecipitation, Mg2+-ATPase activity and actomyosin ATPase of slow muscles of white rats increased greatly. In actomyosin of fast muscles the exposure induced weaker and opposite changes in the superprecipitation rate and Mg+2-ATPase activity. The changes in actomyosin of the fast muscles were associated with shifts only in regulatory components while those of the slow muscle were produced by shifts in contractile proteins as well. This provided for a better recovery of the initial value of the superprecipitation rate and Mg+2-ATPase activity of actomyosin of the fast muscles a month after exposure. E.A.K.

INDIVIDUAL DIFFERENCES IN MAXIMUM OXYGEN UPTAKE REGULATION AND LEVEL
V. S. GOROZHANIN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 99-105 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 72-77
Avail: NTIS HC A07

Neuronal and hormonal mechanisms responsible for the differences in the maximum oxygen consumption are discussed. The subjects with electroencephalographic and sensory signs of stimulating reticular-hypothalamic-amugdalic effects balanced with inhibitory cortical-striatic-septic-hippocampal-epiphyseal effects showed a high oxygen consumption, moderate excretion of epinephrine and norepinephrine, moderate plasma concentrations of ACTH, cortisol, total and free 11-OHCS and insulin, relatively high concentrations of STH, and specific dynamics of hormonal and metabolic reactions to aerobic effects. They included a moderate increase of the excretion of dopamine, DOPA and plasma concentrations of ACTH, a comparatively stable level of cortisol, total and free 11-OHCS, drastic increases of norepinephrine excretion and STH, lactate and pyruvate concentrations, a moderate decrease of insulin and pH levels. The subjects with high hypothalamic-reticular-amygdalic effects exhibited an opposite type of endocrine activity and time-course variations of hormonal-metabolic parameters, as well as low values of oxygen consumption. E.A.K.

AGE-RELATED CHANGES IN ELECTROENCEPHALOGRAMS OF PILOTS
E. MARKS, W. ZUZEVIC, E. DWOREZKI, and M. MAZENZKI *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 120-122 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 85-86
Avail: NTIS HC A07

An age related changes in electroencephalograms of pilots study was conducted in two stages. At the first stage a visual and statistical analysis of 343 EEG of 125 pilots; at the second, pilots of two age groups were screened: the average age of individuals in the first group was 24.7 years and in the 2d group, 43.8 years. Evoked potentials (EP) matched in response to photic stimuli was used. The average age at the start of EEG observation was 25.1 + or - 5.5 years and at the end, 43.6 + or - 4.6 years. Regularity of alpha rhythm on the EEG, mean frequency of basic rhythm, mean amplitude, reaction delay, activation of EEG by hyperventilation and light flashes (stroboscope) correlation between slow waves, frequency and amplitude of basic rhythm, correlation between EEG and clinical parameters are analyzed. A specially developed chart to analyze the EEG and the criteria of Student, Shapiro-Wilke and X2 in statistical processing are used. E.A.K.

COMBINED EFFECTS OF STRESSORS ON THE LEVEL OF SPINAL REFLEX ARC STRUCTURES
F. I. FURDUY, S. K. KHAYDARLIU, and L. M. MAMALYGA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, No. 5, September - October 1985 (JPRS-USB-85-007) p 135-140 25 Nov. 1985 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow), v. 19, no. 5, Sep. - Oct. 1985 p 92-95
Avail: NTIS HC A07

Long-term restriction of motor activity alters appreciably the motor analyzer, including the spinal reflex arc which is the peripheral element of the central nervous system in effecting interaction between the body and environment. The initial period of hypokinesia differs appreciably from the subsequent period of adaptation and is associated in animals with the release reaction and occurs in the presence of a marked stress reaction leading to stressed function of the central nervous system and most other systems of the body. Hypoxia is the most frequent companion of hypokinesia, together with other extreme environmental factors. No data concerning the combined effects of various stressors on the level of the spinal reflex arc are available. The morphological and cytochemical changes in cellular structures of spinal cord ganglia (SCG) and motoneurons of the ventrolateral nucleus (VLN) of the spinal cord on the level of the lumbar and cervical spine under the separate and combined effect of stressors are studied. E.A.K.

PORTABLE DIAGNOSTIC RADIOMETER Final Report, 1 Oct. 1983 - 30 Jun. 1984
Jul. 1985 68 p
(Contract N00014-83-C-0524)
(AD-A157685) Avail: NTIS HC A04/MF A01 CSCL 06E

There exists a need for a portable diagnostic instrument that can noninvasively monitor and display internal body temperatures. This instrument would be extremely important on U.S. Navy ships whose complement does not include the services of competent medical professionals. In this case it would be important to determine whether a particular medical emergency does or does not exist in a patient. This would determine whether the patient should or should not be evacuated to a suitable medical facility for treatment. The instrument would determine, by radiometric means, whether particular organs exhibit an elevated temperature. For example, this may be an aid in the diagnosis of appendicitis or nephritis. The instrument described in this report is a dual-frequency microwave radiometer. The radiometer measures the amount of noise power being radiated from a localized tissue volume on the patient. The amplitude of this noise power over a frequency spectrum determined by the microwave components is proportional to the average temperature of the volume in question. Making this measurement at two separate frequencies can give an indication of the temperature profile over a depth as great as 6 cm. Author (GRA)

Three major aims of the contract were addressed in the past 6 months: (1) We completed our study of the relationship between hypoxia-induced periodic breathing in sleep and the occurrence of obstructive apnea. (2) The question of respiratory muscle fatigue during exercise in humans was studied in highly fit subjects performing high intensity exercise to exhaustion. (3) We have studied respiratory muscle recruitment during exercise and saw evidence of active expiration even in mild exercise. GRA

STUDIES CONCERNED WITH BASIC RADIATION PROTECTION CRITERIA AND STUDIES CONCERNED WITH GUIDANCE AND INFORMATION
24 Jul. 1985 6 p
(Contract N00014-84-C-0776)
(AD-A158319) Avail: NTIS HC A02/MF A01 CSCL 06R

Scientific Committee 1 is a standing committee of the NCRP charged with the formulation of basic radiation protection criteria. The Committee is actively engaged in the development of a radiation protection system based on risk. The average annual risk of mortality associated with employment in safe industries is being used by the Committee as the guideline for developing recommendations for the maximum annual risk of mortality for occupational radition exposure. Levels of risk associated with external whole body exposure, partial body exposure, internal exposure and the methodology for the summation of these risks are also being addressed by the Committee. The Committee plans to draft four reports over the next few years. These will cover: (1) exposure limits, (2) the philosophical basis of a radiation protection system based on risk, (3) site-specific risk coefficients, and (4) implementation of a radiation protection system based on risk. The report on exposure limits, Recommendations On Exposure Limits, will enter the Council's review process during the summer of 1985. GRA

CIRCULATORY AND THERMOREGULATORY ACTIONS OF HYDRATION DURING EXERCISE-HEAT STRESS
M. N. SAWKA, R. P. FRANCESCONI, and K. B. PANDOLF Aug. 1985 14 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A158440; USARIEM-M36/85) Avail: NTIS HC A02/MF A01 CSCL 06S

During exercise in the heat, sweat output often exceeds water intake resulting in hypohydration. Hypohydration during exercise causes a greater heat storage and reduces endurance in comparison with euhydration levels. The greater heat storage is attributed to a decreased sweating rate as well as decreased cutaneous blood flow. These response decrements are attributed to both plasma hyperosmolality and plasma hypovolemia. In addition, plasma hypovolemia will result in a reduced cardiac output response, relative to euhydration, during exercise-heat stress. Hyperhydration, or body fluid excess, only provides the advantage of delaying the onset of hypohydration. Author (GRA)

DEVELOPMENT OF VACCINES TO THE MYCOTOXIN T-2 Final Report, 16 May 1983 - 15 Feb. 1985
V. MANOHAR 15 Mar. 1985 16 p
(Contract N00014-83-C-0441)
(AD-A158544; FR-1) Avail: NTIS HC A02/MF A01 CSCL 06E

An ELIAS System to detect and titer antibody to Mycotoxin T-2 was standardized. A new rapid simple method of making T-2 hemisuccinate (T-2-HS) was developed. The merit of the new method over the existing one accounts for its simple, less time-consuming procedure, which can be carried out at room temperature, with as high a yield of 66%. T-2-HS so developed was conjugated to derivatised sepharope-4B beads to make a column to affinity purify the antibody to Mycotoxin T-2. Polyclonal antisera to T-2 toxin was produced by immunizing rats and mice with T-2-HS coupled to KLH, goat antimouse IgG and monoclonal antimouse IgD. Affinity purified antibody to T-2 was employed in immunizing mice for the development of anti-idiotypic antibodies. Initially syngeneic immunization were carried out in Balb/c mice. Protective role anti-T-2 antibodies upon passive transfer, was examined. Both monoclonal and polyclonal antibodies to T-2, were found to neutralize T-2 toxin in vitro. Upon passive transfer to skin intradermally, inhibition of skin necrotization effect due to T-2 toxin was demonstrated, suggesting, role of an effective antidote. Protective immunity to in vivo exposure to T-2 toxin, upon active immunization with T-2-HS was also examined. Skin necrotization effect of T-2 toxin was completely inhibited in immune rats. However, the in vivo effect of Oral T-2 toxin, as measured by leucopenia in actively immunized rats, was not dramatically significant. GRA

BENZODIAZEPINE ACTIVITY: DAYTIME EFFECTS AND THE SLEEP EEG Interim Report, Sep. 1978 - Jun. 1984
L. C. JOHNSON and C. L. SPINWEBER 22 Aug. 1984 19 p
(AD-A158702; NAVHLTHRSCHC-84-33) Avail: NTIS HC A02/MF A01 CSCL 06O

In this paper we review the effects of benzodiazepine hypnotics on the structure of sleep, arousal threshold during sleep, and the impact of bedtime hypnotic use on next-day performance. We also describe the effects of discontinuation of use of long and short half-life sedative-hypnotics. Results indicate that the half-life of benzodiazepine hypnotics is not the best predictor of next-day performance effects, arousal threshold effects, or the nature of EEG changes during sleep. Other pharmacokinetic properties, such as volume of distribution, must also be considered. Long and short half-life benzodiazepines both may produce a rebound insomnia, although the time of occurrence seems to differ. The marked individual differences in response to similiar drug plasma levels plus processes of tolerance and adaptation limit the probability that significant correlations during chronic use. Dose level is the best predictor of next-day effects, and so, the smallest effective dose should be described. GRA

BIOCYBERNETIC ANALYSIS OF A HYBRID WORKLOAD MODEL Final Report, 30 Sep. 1984 - 30 Mar. 1985 on Phase 1
B. H. KANTOWITZ May 1985 40 p
(Contract F49620-84-C-0116)
(AD-A159033; BRA-85-10; AFOSR-85-0661TR) Avail: NTIS HC A03/MF A01 CSCL 05J

Biocybernetic measures - heart rate inter-beat interval (IBI) and event-related brain potential (ERP) - were used to provide converging operations to refine a hybrid model of attention and workload. Two experiments using the psychological refractory period paradigm were conducted with stimulus-response uncertainty and inter-stimulus interval (ISI) as manipulations of workload.

Reaction time was influenced by uncertainty and ISI; IBI standard deviation and spectral data were influenced by uncertainty; preliminary analysis of ERP showed N200 amplitude to be influenced by uncertainty and ISI. These results were related to a hybrid processing model formulated by Kantowitz and Knight (1976). GRA

A MULTI-ISOTOPE PROCEDURE FOR SIMULTANEOUSLY ESTIMATING THE VOLUME OF BODY FLUID COMPARTMENTS OF SWINE Report, for Jan. 1983 - May 1985
C. A. BOSSONE and J. P. HANNON Jun. 1985 64 p
(Contract DA PROJ. 3M1-61102-BS-10)
(AD-A159631; LAIR-201) Avail: NTIS HC A04/MF A01 CSCL 06P

The purpose of the studies reported in this paper was to develop isotope-based procedures to measure plasma volume, red cell volume, extracellular fluid volume, and total body water individually. Subsequently, techniques would be developed to use a combination of these procedures to measure some or all of the fluid spaces in the pig simulaneously. A procedure was developed for simultaneously estimating the volume of all major body fluid compartments. Splenectomized pigs, 20 to 25 kg, with chronically-implanted carotid artery catheters, received a bolus injection (per kg) (1 uCi 125 I-albumin, 11.7 uCi 51Cr-EDTA, 0.6 uCi 22Na, and 5.3 uCi 3H2O) followed by a 5.2 uCi ml/kg injection of 51 Cr-tagged red cells. Estimated lean body mass averaged 822 g/kg and body fat, 178 g/kg. The new procedure was rapid, technically simple, required small amounts of blood and was applicable to conscious animals. GRA

REDUCTION OF SUBJECTIVE REDUNDANCY IN IMAGE SIGNALS: RESULTS OBTAINED AND RESEARCH TRENDS [RIDUZIONE DI RIDONDANZA SOGGETTIVA NEI SEGNALI DI IMMAGINE: RISULTATI OTTENUTI A LINEAMENTI DI RICERCA FUTURA]
G. DIBLASIO Dec. 1984 35 p refs In ITALIAN
(FUB-24-1984) Avail: NTIS HC A03/MF A01

The structure and the functions of the human visual system are studied in order to improve the compression of image signals without significative quality loss. A rate of up to 100 is considered the long range goal. Filtering structures defined as hypercomplexes are described. These structures give position estimation and velocity vectors of image elements. A model of image contour perception is presented. Other models describing other functions of the visual system are proposed to implement a research program. Author (ESA)

This article reports on the development of a system called Equipment for Distinguishing Speech-Signal Parameters (SVPRS). The system is intended for monitoring the condition of airplane crews in the course of long flights through voice analysis from radio conversations. The system is capable of evaluating a subject's emotional state on the basis of a single spoken word, it is claimed. The system is being developed by the department of aviation medicine of the State Scientific Research Institute of Civil Aviation, with assistance from the USSR Academy of Sciences' Institute of Higher Nervous Activity and Neurophysiology, and, also, cyberneticists of Leningrad. The system consists of a magnetic memory, audio-signal filters, a frequency analyzer, a minicomputer, and instruments for processing recordings of speech and for input of data into the computer. Work on perfecting the system is said to be continuing. B.W.

EFFECT OF LEVEL OF PHYSICAL ACTIVITY ON LIPID METABOLISM OF FLIGHT PERSONNEL
V. I. LIBKIND and V. D. VLASOV *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 40-43 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 29-31
Avail: NTIS HC A08

Lipid metabolism of healthy pilots was investigated and verified by the PWC sub 170 test. Pilots with a lower physical activity showed high levels of cholesterol, triglycerides, total lipids, LDL and low levels of HDL as averaged per group. The PWC sub 170 value and the concentration of lipid fractions in blood were found to be highly correlated, the correlation being nonlinear. The nonlinear regression data suggest that greater physical activity leads to a decrease of the lipid concentration and an increase of the content of high density lipid-protein complexes. Author

OXYGENATION AND REGIONAL CIRCULATION IN GINGIVAL MUCOSAL TISSUES UNDER EFFECT OF HEAD-TO-PELVIS (+GZ) ACCELERATIONS
S. I. VOLVACH, Y. A. KOVALENKO, L. I. VORONIN, N. V. ULYATOVSKIY, V. K. GABYSHEV, V. I. NIKIFOROV, and V. V. ARKHIPOV *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 44-49 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 31-35
Avail: NTIS HC A08

The information content of a new rheopolarographic procedure used to determine the oxygen balance and regional circulation of the gingival mucosa was measured, bearing in mind the applicability of the procedure as an objective index of human tolerance to +Gz acceleration. It was found that the parameters of the oxygen balance and regional circulation of the gingival mucosa were well correlated with blood pressure in the floor of the auricle. In contrast to the traditional methods for assessing tolerance to acceleration, the new procedure provides information about the health condition of the centrifuged subjects on a continuous basis. Variations in the oxygen balance and regional circulation of the gingival mucosa helped to identify compensatory reactions of the cardiovascular system in response to +Gz acceleration. Author

EFFECT OF 7-DAY IMMERSION HYPOKINESIA ON CHARACTERISTICS OF PRECISION MOVEMENTS
L. S. GRIGORYEVA and I. B. KOZLOVSKAYA *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 54-59 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 38-42
Avail: NTIS HC A08

Experiments were carried out to study the effect of 7-day immersion hypokinesia on precision movements that included reproduction of a certain isometric strain of leg muscles and angular displacement of the ankle relative to the 90 deg position. Precision disorders were seen in the structure of movements which lost their stereotypic pattern and became fragmentary, transforming into slow approximate movements versus the pattern of preimmersion movements that were of a rapid programmed control type. Precision changes during plantar flexion movements were usually excessive, hypermetric and almost twice longer than preimmersion. The origin of the above precision changes seems to be primarily associated with muscle atonia. At the same time data analysis shows that in nearly 50% of cases the values of precision changes in movements of various types (efforts and displacements) and different directions (plantar and dorsioflexion) were correlated. This is suggestive of common central mechanisms underlying their development. Author

EFFECT OF DRY IMMERSION MODEL ON PARAMETERS OF FLUID-ELECTROLYTE METABOLISM, BLOOD PLASMA ALDOSTERONE AND CORTISOL LEVELS IN INDIVIDUALS DIFFERING IN BODY FLUID CONTENT
M. A. YUNUSOV, V. N. ORLOV, and T. V. VINOKHODOVA *In its* USSR Report: Space Biology and Aerospace Medicine Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 60-64 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 42-45
Avail: NTIS HC A08

Experiments were carried out to study the effect of dry immersion on fluid-electrolyte metabolism, aldosterone and cortisol content in 22 test subjects with varying content of water in the organism. It was found that dry immersion produced a diuretic effect and facilitated a higher excretion of electrolytes and a lower aldosterone content. The test subjects with a higher content of water in the organism (16 subjects) exhibited a more distinct and prolonged polyuria. During the recovery period the aldosterone content increased insignificantly and failed to return to the baseline level, in contrast to the subjects with a normal content of water in the organism. INFORMATIVENESS OF ECHO SIGNAL IN PULSED ULTRASONOGRAPHY OF THE BRAIN (WITH USE OF MODEL)
L. G. SIMONOV, L. A. ROZENBLYUM, and N. N. BOGDANOVA *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 125-130 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 83-85
Avail: NTIS HC A08

A change in hydrostatic pressure leads to change in intracranial volumetric relationships (IVR) of liquid media, which has a substantial effect on intracranial pressure and blood supply to the brain. As a noninvasive method of assessing IVR, one can use ultrasonic pulsed probing of the walls of the cerebral ventricles. However, because of its low noise immunity and several other factors that affect the amplitude of the echo signal, the reliability of such a method for evaluation of IVR of liquid media is not satisfactory. A method of probing intracranial structures is described in which the ultrasonic pulse penetrates through the frontal bone, passes through the ventricle and is reflected from the stationary occipital bone. A model was developed to determine the informativeness of an echo obtained in this manner. It was demonstrated on this model that a change in level of the echo signal is elicited by change in ventricular volume. The base width of the ventricle causes this to be a monotone function. It was shown that such a probing method is less sensitive to change in acoustic properties of brain tissue than ultrasonic methods involving direct probing of ventricular walls. B.W.

INVESTIGATION OF POSSIBILITY OF USING TWO-FREQUENCY IMPEDOMETRY FOR ESTIMATION OF PROPORTION OF TOTAL AND EXTRACELLULAR BODY FLUIDS
V. P. KROTOV, Y. G. BAZUNOVA, and B. S. KULAYEV *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 131-136 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 86-89
Avail: NTIS HC A08

According to the results of postflight examination of cosmonauts, exposure to weightlessness leads to changes in fluid-electrolyte metabolism and in ratio between liquid phases of the body. It is not possible to establish the kinetics of fluid redistribution in the body as a function of duration of weightlessness, since a method has not yet been found that would permit measurement of body fluids and proportion of each in flight. Recently, works have been published, which report that it is possible to determine the ratio of total body fluid to its extracellular component. This is done by concurrently determination of impedance (Z) in the measured section of the body during passage of current through it at different frequencies. However, all of the studies cited above have a clinical and physiological orientation, with which it is impossible to determine distinctly the quantitative relationship between total fluid and its extracellular component. The objective in this research is to explore the possibility of using two-frequency impedometry to determine the quantitative ratio between total body fluid and its extracellular component. B.W.

AUTOMATIC DETERMINATION OF CARDIAC OUTPUT FROM RHEOGRAM OF THE TRUNK
I. V. SOKOLOVA and L. A. KHRYASHCHEVA *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 137-140 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 89-90
Avail: NTIS HC A08

Depending on the method of recording the trunk rheogram (TRG) and theoretical validation of formulas for subsequent calculations, many rheographic analogues of characteristics of cardiac output are calculated from the amplitude and period of the TRG with use of appropriate multiplicative coefficients. The technical execution of the system for automatic determination of characteristics of cardiac output on the TRG in the form of an algorithm for a computer does not impose restrictions on structure and number of coefficients, and it offers broad research opportunities for studying them in comparison of rheography to other methods. The algorithm for automatic determination of cardiac output features from the TRG is developed in this investigation in the form of a set of programs in the FORTRAN-IV algorithmic language for YeS or SM series computers, and it solves the following problems: (1) isolation of rheowave as the valid signal in the presence of interference, (2) identification of elements in the rheowave structure for the duration of the cardiac cycle, (3) calculation of rheographic characteristics of cardiac output for the cardiac cycle, and (4) statistical averaging of rheographic characteristics of cardiac output in a specified interval for a specified level of significance. B.W.

Man's long-term presence in pressurized environments (PE) imposes certain requirements of the composition of the artificial atmosphere in space vehicles. It is important for there to be no

odors of various impurities. The latter is attributable to the range of reflex effects of chemicals through receptors of the upper respiratory tract on other analyzers, functional state of the central nervous system, various organs, systems and the body as a whole. It is particularly undesirable to have persistent odorous stimuli in the atmosphere of a pressurized environment, and for this reason odorimetric studies are a mandatory stage of setting hygienic standards. However, such studies are performed under ordinary laboratory conditions, without consideration of the possible functional changes in the olfactory analyzer related to long-term isolation of an individual. An attempt was made in this research to demonstrate any possible functional changes in the olfactory analyzer during long-term exposure of man to the artificial atmosphere of a pressurized chamber. GAS CHROMATOGRAPHIC ANALYSIS OF FREE FATTY ACIDS OF SKIN SURFACE LIPIDS
V. P. MAYDINA, B. L. AVETISYANTS, and D. M. DUBININ *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 145-148 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 93-94
Avail: NTIS HC A08

The basic components of sebaceous gland secretions are triglycerides, which are hydrolyzed to free fatty acids, monoglycerides and diglycericdes on the skin surface, under the effect of lipases of microorganisms and other factors. Studies of the microflora of the skin surface revealed that it contains aerobic staphylococci, anaerobic propionobacteria and fungi which have lypolytic activity. A correlation was establishment between quantity of microorganisms of the micrococcus family and acne propionobactria on the skin, on the one hand, and rate of formation of free fatty acids (FFA) of sebum cutneum, on the other band. The bactericidal and fungicidal properties of the skin are attributed to the presence of FFA on its surface. The authors of hypotheses on the pathogenesis of acne simplex believe that inflammation of the follicular wall of a sebaceous gland is related to the irritating effect of FFA. Because of the high sensitivity and informativeness of gas chromatography, it has gained wide use in the last 10 years in biomedical investigations. The objective here was to develop a gas chromatography method for examining the FFA of sebum cutaneum. B.W.

ANTI-TRYPANOSOMAL ACTIVITY OF PLATINUM COORDINATION COMPOUNDS Patent
M. S. WYSOR and L. A. ZWELLING, inventors (to Army) 30 Jul. 1985 4 p
(AD-D011860; US-PATENT-4,532,122;
US-PATENT-APPL-SN-250991; US-PATENT-CLASS-424-10)
Avail: US Patent and Trademark Office CSCL 06O

A novel method has been developed for improved chemotherapy of animals infected with African trypanosomiais. The method involves the concurrent administration of therapeutically effective amounts of cis-diamminedichloroplatinum (II) and bis-(diethylthiocarbamoyl)disulfide (disulfiram) or diethyl dithiocarbamate to the hydrated animal. COMPUTATIONAL MODELS OF HUMAN VISION WITH APPLICATIONS Final Report, Oct. 1985
B. A. WANDELL 12 Sep. 1985 7 p
(Contract NCC2-44)
(NASA-CR-176413; NAS 1.26:176413) Avail: NTIS HC A02/MF A01 CSCL 06P

Perceptual problems in aeronautics were studied. The mechanism by which color constancy is achieved in human vision was examined. A computable algorithm was developed to model the arrangement of retinal cones in spatial vision. The spatial frequency spectra are similar to the spectra of actual cone mosaics. The Hartley transform as a tool of image processing was evaluated and it is suggested that it could be used in signal processing applications, GR image processing. E.A.K.

STATISTICAL RESEARCH ON PROBLEMS OF BIODYNAMICS Final Report
K. C. BURNS, C. A. MAURO, and D. E. SMITH Jul. 1985 23 p
(Contract N00014-79-C-0128)
(AD-A157993; TR-112-19) Avail: NTIS HC A02/MF A01 CSCL 06S

The statistical research conducted focused on two major problem areas within the Navy's biodynamics program at NBDL. Those were: (1) impact acceleration injury, and (2) ship motion sickness. Additional research was conducted in the area of performance testing, which is relevant to both of the primary research topics. The following sections briefly summarize the research accomplished under this contract and provide a reference list of all technical reports (with abstracts), journal articles, and presentations resulting from this research effort. THE MIDDLE LATENCY RESPONSE (MLR) AND STEADY STATE EVOKED POTENTIAL (SSEP) IN NEONATES Ph.D. Thesis
R. C. FIFER May 1985 180 p
(AD-A158007; AFIT/CI/NR-85-100D) Avail: NTIS HC A09/MF A01 CSCL 06P

This study evaluated the characteristics of the middle latency response (MLR) and the related steady state evoked potential (SSEP) in a total of 36 neonates. The reports of previous investigators have cast doubt on the existence of both the MLR and SSEP in neonates. The measurements in these studies were obtained, however, using stimulation and recording parameters that are appropriate for adults. Since virtually all other aspects of neonate audition differ significantly from comparable adult attributes, one goal of this study was to determine the appropriate parameters with which to obtain a valid MLR and SSEP in very young children. Other goals of this study included: (1) evaluation of two different algorithms for low-frequency sensitivity prediction using the SSEP; (2) investigation of the stability of the SSEP over repeated trials; and (3) elucidation of the relationship the neonatal MLR to later occurring auditory evoked potentials. BINOCULAR IMAGE FLOWS: STEPS TOWARD STEREO - MOTION FUSION
A. M. WAXMAN and J. H. DUNCAN May 1985 60 p
(Contract DAAK70-83-K-0018; DE-AC03-84ER-80189)
(AD-A158089; CAR-TR-119; CS-TR-1494) Avail: NTIS HC A04/MF A01 CSCL 06P

In decomposing the visual information processing task into several stages, it is the intermediate level which is responsible for the recovery of surface shapes in a scene. It is often described as a set of shape from modules which, acting independently and in parallel, feed a viewer centered 2.5-D sketch of the visual field. Two of the most commonly studied and closely related modules are shape from stereo and shape from monocular motion. The analyses of visual data by stereo and motion modules have typically been treated as separate, parallel processes which both feed a common viewer-centered 2.5-D sketch of the scene. When acting separately, stereo and motion analyses are subject to certain inherent difficulties: (1) stereo must resolve a combinatorial correspondence problem and is further complicated by the presence of occluding boundaries; (2) motion analysis involves the solution of nonlinear equations and yields a 3-D interpretation specified up to an undetermined scale factor. This report describes a new module which unifies stereo and motion analysis in a manner in which each helps to overcome the other's shortcomings. One important result is a correlation between relative image flow (i.e., binocular difference flow) and stereo disparity; it points to the importance of the ratio delta/delta, rate of change of disparity delta to disparity delta, and its possible role in establishing stereo

correspondence. Our formulation may reflect the human perception channel probed by Reagan and Beverley (1979). GRA

COMPARISON OF THE AIR FORCE FEMALE AND MALE PILOT GROUNDED TIME IN THE AIR FORCE MILITARY AIRLIFT COMMAND M.S. Thesis
J. A. HOLL Jun. 1985 35 p
(AD-A158093; AFIT/CI/NR-85-84T) Avail: NTIS HC A03/MF A01 CSCL 05I

The US Air Force presently has over 200 female pilots, and the numbers are steadily increasing. This thesis is the first step in determining the effect of female pilots on the Air Forces' flying squadrons' efficiency and effectiveness. This protocol will compare the average number of days per year men and women pilots are grounded for medical reasons. The duty not involving flying time or DNIF statistics will be used for the data. There are no known studies indicating there is a significant difference in male/female pilot medial absenteeism rates. If the female DNIF rate is found to be significantly larger than the males, it may indicate an effect on the squadrons readiness abilities. The Military Airlift Command (MAC) is chosen for sampling because a relatively large number of female pilots (96) are assigned to this command. The women will be compared to a representative sample of 288 male pilots also assigned to MAC. AF form 1041, which reports DNIF time to Command Headquarters, will be used to collect the DNIF days from the past year; age, rank, and marital status will also be collected. DNIF rates will be calculated correcting for person/months of observation. The age, rank, and marital status specific rates will also be compared. Author (GRA)

HUMAN THERMOREGULATORY RESPONSES TO COLD AIR ARE ALTERED BY REPEATED COLD WATER IMMERSION
A. J. YOUNG, S. R. MUZA, M. N. SAWKA, R. R. GONZALEZ, and K. B. PANDOLF Aug. 1985 30 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A158871; USARIEM-M38/85) Avail: NTIS HC A03/MF A01 CSCL 06S

The effects of repeated cold water immersion on thermoregulatory responses to cold air were studied in seven males. A cold air stress test (CAST) was performed before and after completion of an acclimation program consisting of daily 90-min cold (18 C) water immersion, repeated five times a week for five consecutive weeks. The CAST consisted of resting 30 min in a comfortable (24 C, 30% rh) enviroment followed by 90 min in cold (5 C, 30% rh)air. Pre- and post-acclimation, metabolism (M) increased (P 0.01) by 85% during the first 10 min of CAST, and thereafter rose slowly. After acclimation, M was lower (P 0.02) at 10 min of CAST compared to before, but by 30 min M was the same. Therefore, shivering onset may have been delayed following acclimation. After acclimation, rectal temperature (T subscript re) was lower (P 0.01) before and during CAST, and the drop in T subscript re during CAST was greater (P 0.01) than before. Mean weighted skin temperature (T subscript sk) was lower (P 0.01) following acclimation than before, and acclimation resulted in a larger (P 0.02) T subscript re to T subscript sk gradient. Plasma norepinephrine increased during both CAST (P 0.002), but the increase was larger (P 0.004) following acclimation. These findings suggest that repeated cold water immersion stimulates development of true cold acclimation in man, as opposed to habituation. The cold acclimation produced appears to be of the insulative type. GRA

SOME EFFECTS OF ALCOHOL AND SIMULATED ALTITUDE ON COMPLEX PERFORMANCE SCORES AND BREATHANALYZER READINGS
W. E. COLLINS, H. W. MERTENS, and E. A. HIGGINS Jul. 1985 12 p
(AD-A158925; DOT/FAA-AM-85-5) Avail: NTIS HC A02/MF A01 CSCL 06O

This study assessed possible interactive effects of alcohol and a simulated altitude of 12,500 ft. Each of 17 men was trained on the various tasks that comprise the Multiple Task Performance Battery and then performed over a 2-week period in four experimental sessions, viz, ground level (1,300 ft), with and without alcohol, and altitude (12,500 ft), with and without alcohol. Subjects breathed appropriate gas mixtures through oxygen masks at both ground level and high altitude. Subjects performed for 3 hours in the afternoon. Alcohol doses were 2.2 mL of 100-proof vodka per kilogram of body weight mixed with three parts of a selected juice. Each 1-hour test block included five 10-minute performance periods with varying workloads and a 10-minute period for controlled breathanalyzer measurements. Results showed no differential effect of simulated altitude on breathanalyzer readings (peaks averaged .078% at 12,500 ft and .077% at ground level). The best performance occurred at ground level under placebo conditions; the 12,500-ft simulated altitude produced some decrement, for the placebo scores were depressed by altitude. Thus, there was no interactive effect of alcohol and altitude on either breathanalyzer readings or performance scores. However, the general decrement produced by altitude (with or without alcohol) serves to reduce further whatever margin of safety remains in performance skills following alcohol ingestion. ENHANCING VISUAL SENSITIVITY Final Report, 1 Oct. 1983 - 30 Sep. 1984
R. SEKULER 24 May 1985 36 p
(Contract AF-AFOSR-0246-80)
(AD-A158799; AFOSR-85-0663TR) Avail: NTIS HC A03/MF A01 CSCL 05J

This report summarizes the major studies carried out under AFOSR grant 80-0246 from October 1, 1983 through September 30, 1984. During this report period we did coordinated work on two aspects of motion perception. One work unit extended our earlier research on how training affects direction discrimination. These studies give new insights into the physiological locus and character of this particular form of perceptual learning. The second work unit exploited perceptual confusions among motion metamers in order to develop a quantitative model of the mechanisms that underlie human direction perception. The model is built around a small number (n=12) of broadly-tuned directionally-selective mechanisms. This model gives an excellent account of the experiments with motion metamers. Author (GRA)

VISUAL SENSITIVITIES AND DISCRIMINATIONS AND THEIR ROLES IN AVIATION Interim Technical Report, 1 Oct. 1983 - 30 Sep. 1984
D. REGAN 17 Jun. 1985 44 p
(Contract AF-AFOSR-0030-84)
(AD-A158962; AFOSR-85-0639TR) Avail: NTIS HC A03/MF A01 CSCL 05I

This report present four studies. An individual's ability to discriminate small differences in orientation about 5% and 0.5 deg respectively contrasts with the coarse size and orientation selectivity of neurons in the visual cortex of the brain. We report evidence that these fine discriminations are achieved by means of opponent processing: size discrimination is determined by antagonism between neurons that are coarsely selective for size, and orientation discrimination is mediated by neurons that are coarsely selective for orientation. Opponent processing implies that the neurons that determine detection are not the neurons that determine fine discrimination: we have experimentally verified that prediction. We have measured motion discrimination in pilots and attempted to predict flying performance in simulators and telemetry-tracked aircraft. Correlations between laboratory tests and flying performance were encouraging, and were much stronger than for simple visual sensitivities such as motion on contrast sensitivity. Some objects are invisible unless they move relative to the background, for example, a grassy hillock viewed against grass in nap of the earth helicopter flight. We have compared human visual sensitivity to such objects, with sensitivity to conventional objects defined by brightness difference. Spatial summation area, and temporal summation area are much larger for motion-defined objects than for brightness-defined objects. We report evidence that the Vector Analysis technique of mathematics may be relevant to the physiological study of visual cues in guided self-motion. GRA

STOCHASTIC DIFFERENTIAL EQUATIONS FOR NEURONAL BEHAVIOR
S. K. CHRISTENSEN and G. KALLIANPUR Jun. 1985 44 p
(Contract F49620-82-C-0009)
(AD-A159099; TR-103; AFOSR-85-0706TR) Avail: NTIS HC A03/MF A01 CSCL 06P

This article extends the recent work of Kallianpur and Wolpert modeling the behavior of neurons by means of stochastic partial differential equations on the dual of a nuclear space. The extensions will cover nuclear spaces of a more general structure and will apply to models described in terms of more general differential operators. A second objective of this article is to present a theoretical framework which will include the model recently proposed and heuristically investigated by Wan and Tuckwell. The authors illustrate their approach and its application by giving a rigorous treatment of the Wan and Tuckwell model. But first they briefly describe the neurophysiological context. Author (GRA)

APPLICATION OF THE SYSTEM IDENTIFICATION TECHNIQUE TO GOAL-DIRECTED SACCADES Final Report, May 1984 - May 1985
J. D. ENDERLE Jul. 1985 30 p
(Contract F49620-82-C-0035)
(AD-A159102; USAFSAM-TR-85-37) Avail: NTIS HC A03/MF A01 CSCL 06P

System identification techniques were used to estimate muscle forces during horizontal saccadic eye movements in order to better understand the neuronal control strategy. The lateral and medial rectus muscle of each eye was modeled as a parallel combination of an active state tension generator with a viscosity and elastic element, connected to a series elastic element. The eyeball was modeled as a sphere connected to a viscosity and elastic element. The predictions of the model were shown to be in good agreement with the data. The results of extensive analysis did not support the existence of a postulated continuous-time external feedback control mechanism. Analysis of the data, however, did support a time optimal control strategy, a strategy which directs the eyeball to its destination in minimum time to saccades of all sizes. GRA

A COMPARISON OF THE EFFECTS OF CIRCUIT WEIGHT TRAINING ON MEN AND WOMEN Interim Report
E. J. MARCINIK, J. A. HODGDON, J. J. OBRIEN, and K. MITTLEMAN Jun. 1985 17 p
(Contract M00-96-PN)
(AD-A159419; NAVHLTHRSCHC-85-13) Avail: NTIS HC A02/MF A01 CSCL 06S

Prior to training, women exhibited 52.6% of male upper torso dynamic strength and 56.5% of male lower torso dynamic strength. Both sexes responded in a similar manner to the circuit weight training format. Dynamic muscular strength gains were 13.7% for men and 15.7% women. Stamina and all indices of relative body composition were unaffected by training. It can be concluded that circuit weight training demonstrates a potential for shipboard application. It results in the muscular strength gains shown to be necessary for shipboard work performance. It also helps to maintain aerobic fitness in a limited space environment. GRA

JUDGMENTS OF NATURAL AND ANOMALOUS TRAJECTORIES IN THE PRESENCE AND ABSENCE OF MOTION
M. K. KAISER (NASA, Ames Research Center, Moffett Field, CA; Michigan, University, Ann Arbor), D. R. PROFFITT, and K. ANDERSON (Virginia, University, Charlottesville) Journal of Experimental Psychology (ISSN 0278-7393), vol. 11, no. 4, 1985, p. 795-803. refs
(Contract NIH-HD-16195)

Three experiments using McCloskey's curved tube problem, in which people are asked to predict the path that a ball takes when it is shot through a tube curved in a 'C' or spiral, are reported. The first experiment compared the perceptual and representational competencies of observers in recognizing the natural trajectory of the ball, and the second examined the competencies of children on this problem. The third experiment attempted to enhance the representational competence of observers by encouraging them to use a mental imagery approach to the problem. The subjects were presented with both on-going events and with static representations of the event. Men performed better than women under both these conditions, a result not attributable to formal instruction in physics. Children showed no gender effect. The use of mental imagery did not enhance performance on the static test. C.D.

NEURAL DYNAMICS OF PERCEPTUAL GROUPING - TEXTURES, BOUNDARIES, AND EMERGENT SEGMENTATIONS
S. GROSSBERG and E. MINGOLLA (Boston University, MA) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 2, Aug. 1985, p. 141-171. refs
(Contract AF-AFOSR-85-0149; DAAG29-85-K-0095)

A variety of perceptual grouping (PG) and segmentation phenomena, including the PG of textured images, randomly defined images, and images built up from periodic scenic elements, were analyzed in the framework of a real-time visual processing theory (VPT). The theory introduces the distinction between a boundary contour system (BCS) and a feature contour system (FCS) to explain paradoxical data concerning brightness, color, and form perception. Implications of the VPT for the process of PG are discussed. Computer simulations of PG are presented which establish the competence of the BCS as a PG system. The properties of the BCS are compared with probabilistic and artificial intelligence models of segmentation. The results suggest a new approach to the design of computer vision systems to provide a universal set of rules for PG of scenic edges, textures, and smoothly shaded regions. I.S.

A86-17772
A RULE-BASED MODEL OF HUMAN PROBLEM-SOLVING BEHAVIOR IN DYNAMIC ENVIRONMENTS
A. KNAEUPER (Forschungsinstitut fuer Antrhropotechnik, Wachtberg-Werthhoven, West Germany) and W. B. ROUSE (Georgia Institute of Technology, Atlanta) IEEE Transactions on Systems, Man, and Cybernetics (ISSN 0018-9472), vol. SMC-15, Nov.-Dec. 1985, p. 708-719. refs
(Contract N00014-82-K-0487)

Human problem solving is considered with emphasis on situations involving human-machine interaction in detecting, diagnosing, and compensating for failures in engineering systems. An overall model is presented which considers the breath and robustness of human problem-solving behavior in dynamic environments typical of engineering systems. A realization of the general structrue of this model within a particular rule-based computer program is discussed. In this program the human behavior in controlling a dynamic process is represented by a set of production rules. The selection of appropriate production rules for a given situation is performed by ordering the rules for specific tasks and by a control mechanism. The latter provide a means to access only a small part of the knowledge base at a time in order to derive decisions as opposed to searching the whole knowledge base. This program was applied to model human problem solving in a process control task. Results from comparing model and subject behavior are presented and discussed. Author

'ACTIONS NOT AS PLANNED' IN MILITARY AIR-TRAFFIC CONTROL
C. P. LANGAN-FOX and J. A. C. EMPSON (Hull, University, England) Ergonomics (ISSN 0014-0139), vol. 28, Nov. 1985, p. 1509-1521. refs

Observations were made of the errors made by eight air-traffic controllers over two periods each of 2 1/2 hours. Errors were classified using a recently devised classification of motor-program errors (Reason 1979), and all the controllers were observed under three conditions of workload, and performing two ostensibly similar air-traffic tasks. More errors were found with increasing workload, but only in one of the tasks. This was interpreted in terms of the pacing and time stress inherently imposed in that task. The assessment of error incidence seems a good candidate as a nonintrusive measure of workload. Analysis of errors in terms of Reason's typology showed no interaction with any of the other variables. Author

SELF-CONTROL OF PSYCHOPHYSIOLOGIC RESPONSE TO MOTION STRESS USING BIOFEEDBACK TO TREAT SICKNESS
D. R. JONES, R. A. LEVY, L. GARDNER, R. W. MARSH, and J. C. PATTERSON (USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, Dec. 1985, p. 1152-1157. refs

Investigators of the Neuropsychiatry Branch, Clinical Sciences Division, U.S. Air Force School of Aerospace Medicine (USAFSAM), provided biofeedback-moderated behavioral treatment to 53 fliers grounded for chronic, severe motion sickness, and followed each flier for 2 years after treatment completion. Success was defined as returning to and maintaining satisfactory operational flying status. Of these, 42 fliers (79 percent) met this criterion; three (6 percent) were partially successful, and eight (15 percent) were subsequently grounded for recurrent airsickness. Follow-on studies will investigate psychophysiological mechanisms through which this method of treatment works. Author

SKILL ACQUISITION: COMPILATION OF WEAK-METHOD PROBLEM SOLUTIONS Interim Report, Aug. 1984 - Aug. 1985
J. R. ANDERSON 12 Aug. 1985 75 p
(Contract N00014-84-K-0064)
(AD-A158725; TR-85-1-ONR) Avail: NTIS HC A04/MF A01 CSCL 05J

Cognitive skills are encoded by a set of productions, which are organized according to a hierarchical goal structure. People solve problems in new domains by applying weak problem-solving procedures to declarative knowledge they have about this domain. From these initial problem solutions, production rules are compiled which are specific to that domain and that use of the knowledge. Numerous experimental results follow from this conception of skill organization and skill acquisition. These experiments include predictions about transfer among skills, differential improvement on problem types, effects of working memory limitations, and applications to instruction. The theory implies that all variety of skill acquisition, including that typically regarded as inductive, conforms to this characterization. GRA

ASSESSMENT OF VISUOSPATIAL ABILITIES USING COMPLEX COGNITIVE TASKS Final Report, 1 Jun. 1983 - 1 Apr. 1984
G. L. ALLEN Nov. 1984 36 p
(Contract AF-AFOSR-0161-83)
(AD-A158919; AFOSR-85-0665TR) Avail: NTIS HC A03/MF A01 CSCL 05J

Two studies were conducted in separate areas concerned with visuospatial abilities. The first study was designed to examine the effects of type of instruction (verbal versus graphic) and sex of subject on the acquisition of procedural knowledge in a spatial

task. The spatial task employed was a computerized maze learning task, with trials to criterion and errors to criterion serving as dependent variables. Results indicated that graphic instructions led to fewer errors and trials to criterion than did verbal instructions. However, the performance of males was not superior to that of females, and the hypothesized interaction involving type of instruction and sex of subject was not found. Correlations between psychometric measures of cognitive abilities and measures of maze learning were easily interpreted for learning under graphic instructions but were difficult to interpret for learning under verbal instructions. These findings suggested the need for additional research focusing on: (1) replicating the current results, (2) delineating the factors underlying individuals' learning effectiveness under different types of instructions, and (3) examining individuals' awareness of the relationship between learning effectiveness and type of instruction in visuospatial tasks. The second study was designed to determine the relationship between performance on traditional paper-and-pencil tests of spatial abilities and performance on a task required marrospatial cognitive skills.

NEUROPHYSIOLOGICAL BASES OF EVENT-RELATED POTENTIALS Annual Report, 1 May 1984 - 30 Apr. 1985
C. S. REBERT Jun. 1985 64 p Original contains color illustrations
(Contract F49620-82-K-0016)
(AD-A158997; AFOSR-85-0575TR; AR-3) Avail: NTIS HC A04/MF A01 CSCL 06P

In order to more fully understand the physiological and psychological significance of event-related potentials, cortical and subcortical recordings are being obtained from monkeys performing in operant-conditioning tasks. Five cynomolgus monkeys were successfully trained in the cued-reaction time task at SRI International and recordings were obtained in several experimental conditions--tone discrimination, variation of interstimulus interval (ISI) and stimulus proportionality, and administration of atropine. Under some conditions stimulus salience was enhanced, as evidenced by enlarged evoked potentials, when the ISI and stimulus proportionality were altered. The effects of the anticholinergic drug atropine could be attributed to its peripheral effects. Preliminary examination of dynamic intracerebral interactions in one monkey was carried out in collaboration with A. Gevins at the EEG Systems Laboratory, and studies of two monkeys were continued at Stanford in order to study the P300 wave. Five female stump-tailed macaque monkeys were purchased, trained, and implanted and are ready for tone-light pairing and recording.

PERFORMANCE MEASUREMENT GUIDELINES FOR RESEARCH Final Report, 15 Mar. 1980 - 30 Sep. 1982
D. VREULS, R. W. OBERMAYER, A. L. WOOLDRIDGE, and M. J. KELLY 13 Jun. 1985 201 p
(Contract F49620-80-C-0058)
(AD-A159055; AFOSR-85-0642TR) Avail: NTIS HC A10/MF A01 CSCL 05I

All three military services are developing automated human performance measurement systems fore aviation training devices and research on human performance. The purpose of this study was to create a set of aircrew-system performance measurement guidelines for research based on a review of current practice, and the measurement experience and technical judgement of the investigators. A subjective analysis of common measurement requirements among flight tasks for all phases of military aviation was conducted. The selection of system state variables would be dictated by the individual research problem, but guidelines for sampling, measure segmentation, and selection of transforms to create measurement were developed for common flight tasks and measurement problems. Performance measurement issues in system design, training, and automated performance measurement system design were discussed. FORTRAN program listings for common transforms and specialized multivariate data analyses for selecting and constructing measurement from empirical data were appended. Use of the illustrated techniques was recommended, as was the need to update these techniques as measurement experience accrues.

SYLLOGISTIC REASONING TASKS, A METHODOLOGICAL REVIEW Final Report, Jun. - Aug. 1983
A. NARVAEZ and J. C. MILLER Jul. 1985 33 p
(Contract AF PROJ. 2312)
(AD-A159190; USAFSAM-TR-84-41) Avail: NTIS HC A03/MF A01 CSCL 05J

The syllogism is a system of reasoning that has been both used and investigated in psychology. The syllogism has many components and defining characteristics. Four basic models of form representation (spatial, linguistic, mixed, and algorithmic) used for linear syllogisms are briefly described. Debate concerning the processes that subjects use in solving syllogisms has led to the formulation of process models. It proposed model for linear syllogisms provides a way to break down the stages of syllogistic problem solving in order to predict performance. Many factors have been shown to affect or influence subjects' performance in syllogistic reasoning. Two historical hypotheses concerning sources of error are the atmosphere, or global impression, of the syllogism--and the conversion hypothesis--which emphasizes illicit processes subjects use in solving syllogisms. Other sources of error include figure effects (syllogisms in certain figures are more difficult than others) and personal bias (one's personal beliefs and attitudes influence performance on syllogisms that are emotion laden or of a controversial nature). Formal rules with which to test the validity of categorical syllogisms are proposed as guidelines for syllogism task construction, and suggestions for experimental design are presented.

MOMENT BY MOMENT VARIATION IN THE COGNITIVE ACTIVITY OF EXPERTS
R. M. HAMM Aug. 1985 91 p
(Contract N00014-81-C-0591)
(AD-A159466; AD-E440296; CRJP-257) Avail: NTIS HC A05/MF A01 CSCL 05J

This paper reports the analysis of moment by moment variation in the use of intuitive and analytical cognition by experts engaged in a complex judgement task. Six highway engineers were asked to think aloud while producing formulas that expressed their knowledge of how highway aesthetics, safety, and capacity are determined by sets of relevant factors. Each engineer's statements were measured with multiple indices of the use of intuitive or analytical cognition, thus producing a moment by moment measure of the engineer's cognitive activity. Measures reflecting the rate of alternation between intuition and analysis, as well as linear and nonlinear trends, were derived from this. Differences in these measures due to task topic were found. Two predictions from Cognitive Continuum Theory were supported by the data: (a) the average segment was more analytical on the capacity task than on the aesthetics task, and (b) the rate of alteration between analysis and intuition was faster on the capacity task, which has high standards, than on the aesthetics task. The subtask the engineer was engaged in was also measured over time, and its was found that subjects used different modes of cognitive activity on different subtasks. Finally, it was discovered that the proportion of time the engineer spent doing particular cognitive activities and particular subtasks was related to the production of more accurate formulas.

AN INVESTIGATION OF JUDGMENTS OF CATEGORY FREQUENCY Technical Report, Jul. 1982 - Jun. 1983
J. A. ENGLERT Oct. 1984 47 p
(Contract DA PROJ. 2Q2-62722-A-791)
(AD-A159555; ARI-TR-653) Avail: NTIS HC A03/MF A01
CSCL 05J

Two experiments investigated the kinds of frequency information that people can remember and individual differences in accuracy of reporting frequency. The task involved presenting individual instances of natural categories and requiring subjects to give absolute estimated of the number of times each category had occurred. In the first experiment, the variability of items was manipulated to assess whether subjects base their estimates on a direct memory access or on a retrieval and mental count of individual instances. A second experiment evaluated subject's capability to report category frequency at two levels of conceptual organization and whether the accuracy of either type of judgement was related to learning style. Data from both experiments suggested that frequency is encoded directly with the memory representation for the concept. The second experiment revealed a sensitivity for frequency of both higher and lower categories, although the former were substantially underestimated. Learning style was not related to either frequency judgement task. The observed underestimation of high frequencies implies a need to take this fundamental judgement bias into account when training persons to make frequency judgements as part of analytical tasks such as risk assessment. THEORETICAL AND EXPERIMENTAL ANALYSIS OF PILOT FAILURE DETECTION BEHAVIOR DURING VARIOUS AUTOMATIC APPROACH CONDITIONS
R. C. VANDEGRAAFF and P. H. WEWERINK 29 Apr. 1983 15 p refs Presented at 19th Ann. Conf. on Manual Control, Cambridge, Mass., 23-25 May 1983
(Contract NIVR-1857)
(NLR-MP-83025-U; B8566436; AD-B094280L) Avail: NTIS HC A02/MF A01

Pilots' failure detection performance was investigated in a moving-base flight simulator. The task considered was the monitoring of stabilized automatic approaches. Abnormal conditions (excessive wind shears or system failures) were to be detected on the basis of unacceptable deviations of displayed variables from their normal positions. Four experienced airline pilots participated in the experiment. The independent variables were: failure type (wind shear or system failure), the axis in which the failure occurred (longitudinal or lateral), and the prior probability of failure occurrence (0.2 to 0.8). The dependent variables were detection times and display deviations at the moment of detection. A theoretical analysis based on a model of the human observer and decision maker formulated in terms of linear estimation and classical sequential decision theory was carried out. Model and measurements agree well, although for two subjects failure detection times are larger. Results show that wind shears are detected more slowly than system failures. Author (ESA)

INVESTIGATION OF FACTORS DETERMINING PILOT'S GEOCENTRIC ORIENTATION
V. V. LAPA, Y. Y. BUKALOV, and N. A. LEMESHCHENKO *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 24-30 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 19-23
Avail: NTIS HC A08

The use of a rational (geocentric) method of orientation in flight is determined by the specific content of the conceptual model that develops in the course of lying experience and by the display of the spatial position of perceptive signs of the geocentric system of coordinates. The importance of these factors is confirmed by a shorter time and a lower number of errors made in assessing the spatial position when the display presented signs of the geocentric system of coordinates. These concepts are studied through flight simulation and flight tests. Author

A COMPUTER MODEL OF DRIVER RESPONSE
L. D. REID, W. O. GRAF, and I. A. STODDARD Sep. 1985 153 p refs Sponsored in part by General Motors and Ontario Ministry of Transportation and Communications
(UTIAS-293; ISSN-0082-5255) Avail: NTIS HC A08/MF A01

The development of a digital computer software package designed to allow the user to predict the dynamic computer software package designed to allow the user to predict the dynamic response of a driver/vehicle system to a limited number of roadway scenarios is described. The simulation is restricted to a single vehicle travelling at constant forward speed and does not cover complex multivehicle interactions. When a driving scenario is specified, the program selects a driver model. A simulation program is used to steer the vehicle through the maneuvers necessary to

complete the driving task. In this manner records of steering wheel position and vehicle trajectory are generated. Three driving scenarios are included in the present development: (1) lane tracking along a straight roadway in the presence of disturbances; (2) lane tracking along a winding roadway; and (3) the obstacle avoidance maneuver. They are basically linear differential equations which mimic the driver's steering wheel response under the conditions which hold in each driving scenario. Each module in the analysis package is described. Author

A COMPUTER MODEL OF CASE-BASED REASONING IN PROBLEM SOLVING: AN INVESTIGATION IN THE DOMAIN OF DISPUTE MEDIATION Ph.D. Thesis
R. L. SIMPSON, JR. Jun. 1985 393 p
(AD-A158097; AFIT/CI/NR-85-81D) Avail: NTIS HC A17/MF A01 CSCL 05J

Rather than approach each problem as a unique event, people often try to solve problems by recalling similar previous experiences as guides to problem solving. This analogical process, which we call case-based reasoning, seems to provide an explanation for the change in problem solving behavior of people over time. This research presents a computer process model of problem solving based on the use of case-based reasoning. The necessary reasoning processes, operational measures of similarity, and memory structures needed for effective storage and retrieval are presented via the specifications for an advisory system called the MEDIATOR, which offers advice on resolving common sense disputes. In this context, issues associated with enabling machines to dynamically adapt their reasoning and automatically recover from failure are discussed. The model of case-based problem solving which has been developed seems to offer promise as an integrated solution for some issues in problem solving, analogical reasoning, and machine learning. GRA

ON LOOKING INTO THE BLACK BOX: PROSPECTS AND LIMITS IN THE SEARCH FOR MENTAL MODELS Technical Report, 1 Jun. 1982 - 31 May 1986
W. B. ROUSE and N. M. MORRIS May 1985 81 p
(Contract N00014-82-K-0487)
(AD-A159080; GIT-TR-85-2) Avail: NTIS HC A05/MF A01 CSCL 05J

The notion that humans have mental models of the systems with which they interact is a ubiquitous construct in many domains of study. This paper reviews the ways in which different domains define mental models, characterize the purposes of such models, and attempt to identify the forms, structures, and parameters of models. The resulting distinctions among domains are described in terms of two dimensions: (1) nature of model manipulation, and (2) level of behavioral discretion. A variety of salient issues emerge, including accessibility of mental models, forms and content of representation, nature of expertise, cue utilization, and, of most importance, instructional issues. Prospects for dealing with these issues are considered, as well as fundamental limits to identifying or capturing humans true mental models. GRA

A GENERAL MODEL FOR THE HOMOGENEOUS CASE OF THE CONTINUOUS RESPONSE Research Report
F. SAMEJIMA 31 Dec. 1983 125 p
(Contract N00014-81-C-0569; DA PROJ. RR0-4204)
(AD-A159345; AD-F630701; RR-83-3-ONR) Avail: NTIS HC A06/MF A01 CSCL 12A

A general model for the homogeneous case of the continuous response is proposed. The model is an expansion and generalization of the one proposed by the author in 1974, in which the open response situation is dealt with. In this generalized model, we deal with the closed response situation, and it includes the model for the open response situation as a special case. It also includes models for the open/closed and the closed/open response situations as two special cases. The distinction among the four response situations depends upon the probability assigned to each of the two extreme values of the continuous response, i.e., the probability zero corresponds to the word open, and non-zero to closed. Some examples are given. GRA

EXPERIENCE AND PERFORMANCE IN VIDEO GAMES AND ITS INFLUENCE ON APTITUDE TESTS IN AVIATION PSYCHOLOGY
K. M. GOETERS and B. LORENZ Jul. 1985 47 p refs In GERMAN; ENGLISH summary
(DFVLR-FB-85-43; ISSN-0171-1342) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 16.50

A method of evaluation of computer video games was used to analyze the relevance of video games for operational aptitude training in aviation psychology and their effects. A video game was used to test visual reaction under increased concentration strain, resistance to mental distraction, spatial orientation, and psychomotor coordination of air traffic controller applicants. Preexperience and performance with the game; preexperience and personality structure and interest; and the relationship between preexperience and performance tests were studied. Preexperience can influence performance with the game and the capacity structure. Preexperience with video games gives advantages to applicants in aviation psychology aptitude tests. Video games constitute a major psychomotor component in evaluation.

HUMAN ROLES IN FUTURE SPACE SYSTEMS
H. L. WOLBERS (McDonnell Douglas Astronautics Co., Huntington Beach, CA) IN: Permanent presence - Making it work; Proceedings of the Twenty-second Goddard Memorial Symposium, Greenbelt, MD, March 15, 16, 1984 . San Diego, CA, Univelt, Inc., 1985, p. 57-69. refs
(AAS PAPER 84-117)

U.S. and Soviet space programs to date have graphically demonstrated the value of humans working in space. The point at issue is to determine where, along the continuum from direct manual intervention to completely automated operations, the mission requirements of future space programs can best be met. The criteria of performance, cost, and risk (mission success probability) are suggested as the principal factors by which program or project managers and systems engineers should select the most effective approach to meeting specific mission objectives. Examples of the application of these criteria are presented.

THE EFFECTS OF TYPE OF KNOWLEDGE UPON HUMAN PROBLEM SOLVING IN A PROCESS CONTROL TASK
N. M. MORRIS (Search Technology, Inc., Norcross, GA) and W. B. ROUSE (Georgia Institute of Technology, Atlanta) IEEE Transactions on Systems, Man, and Cybernetics (ISSN 0018-9472), vol. SMC-15, Nov.-Dec. 1985, p. 698-707. refs
(Contract NAG2-123)

The question of what the operator of a dynamic system needs to know was investigated in an experiment using PLANT, a simulation of a generic dynamic production process. Knowledge of PLANT was manipulated via different types of instruction, so that four different groups were created: (1) minimal instructions only; (2) minimal instructions and guidelines for operation (procedures); (3) minimal instructions and dynamic relationships (principles); and (4) minimal instructions, and procedures, and principles. Subjects controlled PLANT in a variety of situations which required maintaining production while also diagnosing familiar and unfamiliar failures. Despite the fact that these manipulations resulted in differences in subjects' Knowledge, as assessed via a written test at the end of the experiment, instructions had no effect upon achievement of the primary goal of production, or upon subjects' ability to diagnose unfamiliar failures. However, those groups receiving procedures controlled the system in a more stable manner. Possible reasons for the failure to find an effect of principles are presented, and the implications of these results for operator training and aiding are discussed. Author

PILOTS OF THE FUTURE - HUMAN OR COMPUTER?
A. B. CHAMBERS and D. C. NAGEL (NASA, Ames Research Center, Moffett Field, CA) Computer (ISSN 0018-9162), vol. 18, Nov. 1985, p. 74-87. refs

In connection with the occurrence of aircraft accidents and the evolution of the air-travel system, questions arise regarding the computer's potential for making fundamental contributions to improving the safety and reliability of air travel. An important result of an analysis of the causes of aircraft accidents is the conclusion that humans - 'pilots and other personnel' - are implicated in well over half of the accidents which occur. Over 70 percent of the incident reports contain evidence of human error. In addition, almost 75 percent show evidence of an 'information-transfer' problem. Thus, the question arises whether improvements in air safety could be achieved by removing humans from control situations. In an attempt to answer this question, it is important to take into account also certain advantages which humans have in comparison to computers. Attention is given to human error and the effects of technology, the motivation to automate, aircraft automation at the crossroads, the evolution of cockpit automation, and pilot factors. G.R.

(ANL-84-100) Avail: NTIS HC A05/MF A01

The objective of this project has been to evaluate a scientific workstation. A workstation is a dedicated computing system that supplies a fixed quantity of computing resource for its user. A workstation's interactive response and its total throughput are limited by the speeds of various components of the workstation hardware and the operating system software. A forerunner of the scientific workstation is the so-called personal desktop computer, itself a kind of workstation. The architecture of the processors used in personal desktop computers cannot meet the needs of heavy-duty scientific computing work. Semiconductor companies are now striving to implement a generation of 32-bit microprocessors and related circuitry. Out of these efforts have appeared the complete computer systems which are capable of scientific computing. Members of the technical staff were invited to help define minimum configuration and minimum workstation capabilities. After the machine was selected and delivered, it was integrated into the Argonne computing environment. Following this integration, for five months of the six month evaluation period, user evaluators had an opportunity to use the workstation to do their scientific computing. Observations and conclusions are discussed in detail. B.W.

HUMAN FACTORS ENGINEERING DESIGN CRITERIA FOR FUTURE SYSTEMS. DESIGN CRITERIA EVOLVING FROM THE FIRE SUPPORT TEAM VEHICLE (FIST-V) OPERATIONAL TEST 2 Research Report, for Period Ending Jan. 1984
L. M. CRUMLEY and W. K. EARL Jan. 1985 26 p
(Contract DA PROJ. 2Q2-63739-A-793)
(AD-A158312; ARI-RP-85-04; R-2) Avail: NTIS HC A03/MF A01
CSCL 19C

Human factors engineering (HFE) design problems reported in the FIST-5 Operational Test 2 were compared with criteria in MIL-STD-1472C and MIL-HDBK-759A to determine criteria adequacy. Where problems occurred and the related current criteria were adequate, it is recommended that greater emphasis be given these criteria in future programs. New criteria are proposed for inadequate or missing criteria. HFE problems were distributed across 27 different equipment components. Current criteria were judged adequate for 25 features and inadequate for 2. Thus, adequate guidance was available in the current FIST-V partly due

to design constraints inherent in the vehicles since the FIST-V is a modification of the M901 Improved TOW Vehicle. GRA

A COMPARISON OF THE PROTECTION AGAINST IMMERSION HYPOTHERMIA PROVIDED BY VARIOUS TYPES OF COAST GUARD ANTI-EXPOSURE CLOTHING IN CALM VERSUS ROUGH SEAS Final Report
A. M. STEINMAN, M. J. NEMIROFF, J. S. HAYWARD, and P. S. KUBILIS Jun. 1985 86 p
(AD-A158413; USCG-D-17-85) Avail: NTIS HC A05/MF A01 CSCL 06Q

The purpose of this study was to compare the protection against immersion hypothermia provided by various types of Coast Guard Operational clothing to survivors of mishaps in calm versus rough seas. Eight garment ensembles were evaluated: (1) flight suit (control); (2) full wet suit and (3) shorty wet suit (tight-fitting wet garments); (4) aviation antiexposure coveralls; (5) boatcrew antiexposure coveralls, and (6) thermal float coat (loose-fitting wet garments); (7) dry suit; (8) survival suit (dry garments). Mean calm-water temperature was 10.7 C. Rough water mean temperature was 11.1 C. with 4 to 6 foot swells, occasional 4-foot breaks, 2 to 3 foot wind-waves and 0 to 3 knots current. Eight volunteer Coast Guard crewmen wore each garment-ensemble once in each of the two sea conditions. Dependent variables were rectal temperature, groin skin temperature, back skin temperature, heart rate, and subjective evaluations of warmth, tightness of garment fit, and amount of cold water flushing. The results showed signficantly faster mean rectal temperature cooling rates and significantly larger declines in skin temperatures in rough seas than in calm seas for subjects wearing the float coat, aviation anti-exposure coveralls and boatcrew coveralls. Heart rates were significantly faster in rough seas than in calm seas for all garments. Rectal and skin temperature changes were positively correlated with each other and with subjective evaluation of cold water flushing, but they were negatively correlated with warmth and tightness of fit. In general, dry garments provided better protection than did wet garments in both sea conditions, and tight-fitting wet garments provided better protection than did loose-fitting wet garments in rough seas. TEAM PERFORMANCE WITH LARGE AND SMALL SCREEN DISPLAYS
C. E. BROWN and D. G. LEUPP Jun. 1985 20 p
(AD-A158761; AAMRL-TR-85-033) Avail: NTIS HC A02/MF A01 CSCL 05H

Large displays are common in modern command centers, yet the rationale for their use is typically weak. A literature search revealed little previous work comparing performance of teams with large group displays versus individual CRT's. The most applicable previous studies used static tasks and photographic projection systems. The study described here used a complex, dynamic task which required extensive interaction between members of three-person teams to achieve best performance. A comparison was made between the performance of three-person teams viewing either one large screen display or three individual CRT's. Results indicate that display size did not strongly affect team performance, although there were differences in the details of task performance that are attributable to display variables. GRA

HUMAN-MACHINE INTERFACE IN MOBILE TELEOPERATORS
J. V. DRAPER 1985 15 p Presented at the Workshop on Requirements of Mobile Teleoperators for Radiological Emergency Response and Recovery, Dallas, 23 Jun. 1985
(Contract DE-AC05-84OR-21400)
(DE85-013639; CONF-8506148-1) Avail: NTIS HC A02/MF A01

Several reasons are given for the importance of human operators. An ideal human teleoperator interface called telepresence is defined. It is concluded that the human machine interface is not ideal, and that it may be improved, and that available and developing technology can improve interfaces. E.R.

ABRASION-RESISTANT ALUMINIZED-COATED ARAMID FABRICS FOR MANUFACTURE OF FIREFIGHTERS' PROTECTIVE CLOTHING Final Technical Report
R. BRENNEMAN 10 Oct. 1985 71 p
(Contract N00140-83-C-RA12)
(AD-A157056; ADL-88860; NCTRF-160) Avail: NTIS HC A04/MF A01 CSCL 11E

The required yardage of two experimental approaches to developing an abrasion resistant fabric for firefighters protective clothing has been delivered to NCTRF, Natick, Ma, for fabrication into uniforms. The first is an electron-beam (EB) cured coating on the two-side aluminized mylar used in the existing laminated fabric. The second is a one-side aluminized Kapton (K) film laminated metal side to Kevlar fabric. The Kapton product illustrates the principle that a high temperature melting point film, aluminized on one side and laminated metal side down to Kevlar fabric, can provide abrasion and chemical resistance as well as reflectivity. However, its water absorption and adhesive characteristics severely limit use in the water-prone firefighters environment. We believe other high-temperature melting resins, such as polysulfone or polyether-imide, would probably have more suitable adhesive properties than Kapton because they are more water resistant. Both the esperimental EB and Kapton products absorb more heat than the existing product because they reflect less infrared energy than the pure aluminum on the existing product. It is a fundamental fact that only gold metal can be coated on aluminum without reducing its reflectivity of the aluminum. GRA

APPLICATION OF SCREW CALCULUS TO THE EVALUATION OF MANIPULATOR WORKSPACE
L. M. HSIA and T. W. LEE *In* ARO Transactions of the 2nd Army Conference on Applied Mathematics and Computing p 765-785 Feb. 1985
(AD-P004947) Avail: NTIS HC A99/MF E03 CSCL 12A

In this paper, an analytical technique is presented that is based on screw calculus and dual-number matrices to derive the kinematic equations and the workspace formulations of robotic manipulators. A computational procedure for quantitative evaluation of workspace volume is also developed. Several examples are chosen to demonstrate the usefulness and the effectiveness of the approach. One of the basic problems encountered in manipulator design is the determination of the shape of workspace and its characteristics. The workspace, which is the one of operation of a manipulator, is the space associated with possible positions and orientations of the last link of a manipulator. A knowledge of the workspace of a manipulator can provide a measure of the efficiency of the design. Therefore, the investigation on workspace is a fundamental interest. GRA

CNES OF FRANCE RESEARCHES REMOTE CONTROL SYSTEM FOR SPACE
J. M. GUILBERT *In its* West Europe Report: Science and Technology (JPRS-WST-85-015) p 1-4 14 May 1985 Transl. into ENGLISH from Revue Generale de L'Electricite (Paris), Nov. 9814 p 724; 728-729
Avail: NTIS HC A04/MF A01

Mission analysis studies show that the needs for remote control fall into two broad categories: (1) needs for intervention, repair and maintenance; and (2) needs for deployment, assembly and construction. Depending on the missions and on whether the operator is on board the remote-controlling craft or on Earth, the remote-control system will have more or less autonomy of decision. The field of remote-control in space is discussed, as are a few projected or completed systems illustrating the interest of remote control, with or without a man on board. Author

SOME ASPECTS OF DETERMINING HUMAN PHYSICAL WORK CAPACITY UNDER HYPERBARIC CONDITIONS
L. A. BRYANTSEVA and A. Y. MIKHNENKO *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 11-23 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 11-19
Avail: NTIS HC A06

Physical work capacity of man during real and simulated dives is discussed in view of the reported data. The parameter is known to decrease as the breathing gas density and immersion depth increase. The factors limiting the work capacity growth are as follows: greater respiration resistance, higher energy cost of ventilation, CO2 retention, dyspnea, adverse circulation changes. During exposure hyperbaric bradycardia occurs both at rest and upon a work load. This precludes prediction of physical work capacity on the basis of the heart rate alone as a parameter used in a normobaric environment. Tabulated data on the work capacity of divers at various depths obtained by different authors is presented. Author

METHOD OF CALCULATING ANGULAR DIMENSIONS OF FLIGHT VEHICLE COCKPIT CANOPY CASINGS
A. V. LEKAREV *In its* USSR Report: Space Biology and Aerospace Medicine, Vol. 19, No. 4, Jul. - Aug. 1985 (JPRS-USB-85-006) p 120-124 4 Nov. 1985 refs Transl. into ENGLISH from Kosmich. Biol. i Aviakosmich. Med. (Moscow), v. 19, no. 4, Jul. - Aug. 1985 p 81-83
Avail: NTIS HC A08

The view from flight vehicle (FV) cockpits is an important factor in assuring flying safety and providing comfortable conditions for the pilot's visual observation of space outside the cockpit. At the present time, transparent parts of most cockpits in different types of FV are executed in the form of flat panels installed into the metal frame of the cockpit canopy. Presence of opaque components (casings) in the cockpit canopy results in obscuring part of the outside area, which worsens viewing conditions from the pilot's work place. In order to improve the view from FV cockpits with flat transparent parts, a method was developed for calculating the angular dimensions of casings (seams) on the basis of distinctions of human binocular vision. The proposed method makes it possible to meet the requirements as to strength features of the canopy frame and provide for comfortable viewing conditions outside the cockpit. The method is based on crossed diplopia in an empirical horopter from a point of the cyclopic eye of the observer. B.W.

HUMAN FACTORS ENGINEERING DESIGN CRITERIA FOR FUTURE SYSTEMS. REPORT NUMBER 3: DESIGN CRITERIA EVOLVING FROM THE MULTIPLE MULTIPLE ROCKET SYSTEM (MLRS) OPERATIONAL TEST 3 Research Report, for Period Ending Apr. 1984
W. K. EARL and L. M. CRUMLEY Jan. 1985 36 p
(AD-A158316; ARI-RP-85-05) Avail: NTIS HC A03/MF A01 CSCL 19G

This document compares human factors engineering related problems identified in the U.S. Army Operational Test and Evaluation Agency MLRS Operational Test 3 with relevant criteria statements from MIL-HDBK-759A and MIL-STD-1472C. These criteria were reviewed to determine if they provided adequate guidance for making informed design judgements. Areas where existing criteria are inadequate or nonexistent were identified and new complete criteria developed. The new criteria are presented in a format designed to facilitate their use in the design of future similar systems. GRA

MANAGING COMPUTER SYSTEMS DEVELOPMENT: UNDERSTANDING THE HUMAN AND TECHNOLOGICAL IMPERATIVES M.S. Thesis
G. S. CURTIS Jun. 1985 154 p
(AD-A158976) Avail: NTIS HC A08/MF A01 CSCL 05H

This thesis examines the human and technological issues that are often encountered during the development of modern computer information systems. People and technical constraints, including suggestions for minimizing negative consequences, are illustrated throughout the development life cycle. Special emphasis is placed on strategic planning, end user involvement in the requirements definition phase, and user-oriented software. The research consists of a review of current literature concerning techniques, methods and methodologies that are the basis for managing computer information system development. It is a collection of bits and pieces of wisdom by experts from all disciplines within the computer and managing fields. These techniques can be tailored to various scale projects having myriad objectives. The theory and practice of management methods included in this paper can be applied universally to computer projects. However, the study is directed at all U.S. Navy managers who are, or will be, involved in the transition to modern computer information systems. GRA

BOUNDARY STRUCTURES ARE FORMED BY ORGANIC COMPONENTS OF THE MURCHISON CARBONACEOUS CHONDRITE
D. W. DEAMER (California, University, Davis) Nature (ISSN 0028-0836), vol. 317, Oct. 31, 1985, p. 792-794. refs

Boundary structures forming in aqueous phases from nonpolar organic components of carbonaceous chondrites are reported for the first time. The recovery of the nonpolar organic material which formed these structures from the Murchison meteorite is described, and the properties of the material are reported. Two kinds of boundary structures were formed at alkaline pH ranges: microstructures in the form of viscous fluid droplets and thin boundaries capable of acting as a barrier to free diffusion. C.D.

A86-16425
SPIN-DEPENDENT ELECTRON SCATTERING FROM OPTICALLY ACTIVE MOLECULES
D. M. CAMPBELL and P. S. FARAGO (Edinburgh, University, Scotland) Nature (ISSN 0028-0836), vol. 318, Nov. 7, 1985, p. 52, 53. refs

It has been suggested that spin-polarized electrons or positrons emerging in the beta decay of radioactive nuclei may have led to a preferential destruction of one of the two isomers at an early stage of evolution. This process tipped the initial balance of abundance of the two self-replicating isomers, leading to the present isomeric purity of biomolecules. Here, an experiment is described which indicates that spin-polarized electrons, when scattered from optically active molecules, can 'distinguish' between right-handed and left-handed isomers. C.D.

A86-17623
MOLECULAR THEORY OF EVOLUTION: OUTLINE OF A PHYSICO-CHEMICAL THEORY OF THE ORIGIN OF LIFE
B.-O. KUEPPERS (Max-Planck-Institut fuer biophysikalische Chemie, Goettingen, West Germany) Berlin and New York, Springer-Verlag, 1983, 330 p. Translation. refs

The molecular basis of biological information, principles of molecular selection and evolution, the transition from nonliving to living systems, and theoretical models of evolution and the ways

in which they might be tested are considered. Statistical treatment of deterministic and stochastic theories of selection is presented. The information threshold for nucleic acids, information integrating mechanisms, the origin of the genetic code, and self-organization in macromolecular networks are given special consideration. The points of contact between the molecular theory of evolution and the thermodynamic theory of irreversible processes are examined in the framework of thermodynamic principles. Mathematical presentations of the eigenvalue problem, linear stability analysis, and the method of Lagrange multipliers as well as the mathematical relationships involved in stochastic processes are included. I.S.

RADIATION CHEMISTRY OF A MULTICOMPONENT AQUEOUS SYSTEM RELEVANT TO CHEMISTRY OF COMETARY NUCLEI
Z. D. DRAGANIC, S. I. VUJOSEVIC, A. NEGRON-MENDOZA, J. A. AZAMAR, and I. G. DRAGANIC (Universidad Nacional Autonoma de Mexico, Villa Obregon, Mexico) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 2, 1985, p. 175-187. refs

Consequences of irradiation of a water-dominated multicomponent system with large doses (16 to 300 Mrad) of gamma rays from a Co-60 source at 77 and 3210 K were examined. The chemical composition of the 0.2 M HCN/0.12 M CH3OH/0.04 M CH3CN/0.02 M C2H5CN/0.01 M HCOOH system in oxygen-free water was based on the assumptions that comets originated in the outer regions of a primordial nebula and that interstellar compounds are the chemical constituents of the nucleus. Column, paper, and gas chromatography, together with other conventional methods, were used in the analysis of radiology products. At 310 K, about 40 radiolytic products were identified, including some aldehydes, amino acids, and carboxylic acids. Polymeric material with M(w) values of up to 80,000 daltons was separated. At 77 K, the basic radiolysis products were presented, but in lesser quantities (by one to two orders of magnitude). The relevance of the findings to the chemistry of a liquid-water core and the ice layers of a cometary nucleus is discussed, including chemical composition of the nucleus and its temperature regime. I.S.

A86-17807
PARITY-VIOLATING ENERGY DIFFERENCES OF CHIRAL MINERALS AND THE ORIGIN OF BIOMOLECULAR HOMOCHIRALITY
G. E. TRANTER (Oxford University, England) Nature (ISSN 0028-0836), vol. 318, Nov. 14, 1985, p. 172, 173. refs

The homochirality in the biochemistry of terrestrial organisms may be a result of very small differences between the electronic energies of enantiomeric prebiotic molecules resulting from the parity-violating weak interactions. The energy differences are, however, so small for simple chiral molecules that the propagation of homochirality would require a dissymmetry amplification mechanism involving both large quantities of reactants and long reaction time. An alternative theory, presented here, suggests that the effects of the parity-violating weak interactions in crystalline enantioselective prebiotic catalysts, such as clay silicates, may require considerably less amplifications. C.D.

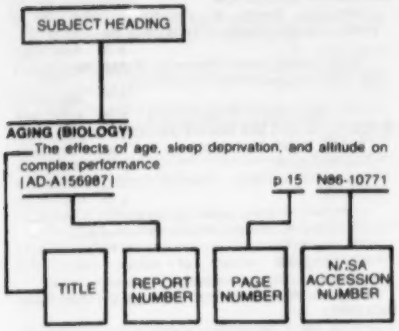
AMINO ACIDS OF THE MURCHISON METEORITE. II - FIVE CARBON ACYCLIC PRIMARY BETA-, GAMMA-, AND DELTA-AMINO ALKANOIC ACIDS
J. R. CRONIN, S. PIZZARELLO, and G. U. YUEN (Arizona State University, Tempe) Geochimica et Cosmochimica Acta (ISSN 0016-7037), vol. 49, Nov. 1985, p. 2259-2265. refs
(Contract NSG-7255)

The five-carbon acyclic primary beta, gamma, and delta amino alkanoic acids of the Murchison meteorite are studied using gas chromatography-mass spectrometry and ion exchange chromatography. The chromatograms reveal that alpha is the most abundant monoamino alkanoic acid followed by gamma and beta, and an exponential increase in the amount of amino acid is observed as the carbon number increases in the homologous series. The influence of frictional heating, spontaneous thermal decomposition, and radiation of the synthesis of amino acids is examined. The data obtained support an amino acid synthesis process involving random combination of single-carbon precursors. I.F.

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Supplement 283)* APRIL 1986

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one' subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

BIOELECTRICITY
Visual perception and memory: Information processes and neuron mechanisms — Russian book p 52 A86-18744
A nonlinear regression procedure for evoked potential data analysis [AD-A157680] p 53 N86-14839
Biological sciences and bioelectromagnetics in Europe [AD-A159221] p 53 N86-14841
Neurophysiological bases of event-related potentials [AD-A158997] p 71 N86-14890

BIOENGINEERING
Biomaterials research in West Germany: An assessment [AD-A158951] p 53 N86-14840

BIOFEEDBACK
Self-control of psychophysiologic response to motion stress Using biofeedback to treat sickness p 70 A86-18833

BIOGEOCHEMISTRY
Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026
Aspects of the biogeochemistry of Big Soda Lake, Nevada p 51 A86-18031

BIOINSTRUMENTATION
Portable diagnostic radiometer [AD-A157685] p 62 N86-14872

BIOLOGICAL EFFECTS
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-004] p 54 N86-14845
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 5, September - October 1985 [JPRS-USB-85-007] p 54 N86-14848
Variation in baseline sister chromatid exchange frequencies in humans [DE85-016084] p 64 N86-14883
Freezing of living cells [DE85-016297] p 55 N86-15862
On the effects of X irradiation on the Bacillus subtilis spores in a dry and wet system [DFVLR-FB-85-44] p 56 N86-15864
Basic results of experiments with long-term rotation of rats as applied to the problem of artificial gravity p 58 N86-15878
Investigation of mineral nutrition of a new form of microalgae to be used in biological life-support systems p 57 N86-15892

BIOLOGICAL EVOLUTION
Molecular theory of evolution: Outline of a physico-chemical theory of the origin of life — Book p 76 A86-17623
Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807
The uniqueness of archaebacteria p 50 A86-17806

BIOLOGICAL MODELS (MATHEMATICS)
Muscle vibrations and man-machine system dynamics — Russian book p 74 A86-18731
Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-18637
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data [CWI-AM-R8418] p 53 N86-14844
Computational models of human vision with applications [NASA-CR-176413] p 67 N86-15898

BIOLOGY
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 5, September - October 1985 [JPRS-USB-85-007] p 54 N86-14848

BIOMAGNETISM
Biological sciences and bioelectromagnetics in Europe [AD-A159221] p 53 N86-14841

BIOMASS
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881
Investigation of mineral nutrition of a new form of microalgae to be used in biological life-support systems p 57 N86-15892

BIOMEDICAL DATA
Biomaterials research in West Germany: An assessment [AD-A158951] p 53 N86-14840
Biological sciences and bioelectromagnetics in Europe [AD-A159221] p 53 N86-14841
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-004] p 54 N86-14845
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-024] p 64 N86-14885

BIONICS
Biocybernetic analysis of a hybrid workload model [AD-A159033] p 63 N86-14880

BIOTECHNOLOGY
Biological sciences and bioelectromagnetics in Europe [AD-A159221] p 53 N86-14841
Biocybernetic analysis of a hybrid workload model [AD-A159033] p 63 N86-14880

BIRDS
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513

BLOOD
Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model) p 66 N86-15867

BLOOD CIRCULATION
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water p 61 N86-14854
Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855
Circulatory and thermoregulatory actions of hydration during exercise-heat stress [AD-A158440] p 63 N86-14875
Oxygenation and regional circulation in gingival mucosal tissues under effect of head-to-pelvis (+Gz) accelerations p 65 N86-15872

BLOOD COAGULATION
Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18844
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14868

BLOOD PLASMA
Plasma norepinephrine, blood pressure and heart rate response to graded change in body position p 59 A86-18835

Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs p 52 A86-18841

A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine [AD-A159631] p 64 N86-14881

Investigation of some aspects of human amino acid metabolism during 120-day antiorthostatic hypokinesia p 65 N86-15873

BLOOD PRESSURE

Plasma norepinephrine, blood pressure and heart rate response to graded change in body position p 59 A86-18835

Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18844

Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855

Oxygenation and regional circulation in gingival mucosal tissues under effect of head-to-pelvis (+Gz) accelerations p 65 N86-15872

BLOOD VOLUME

The effect of +Gz acceleration on cardiac volumes determined by two-dimensional echocardiography p 58 A86-18547

Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs p 52 A86-18841

A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine [AD-A159631] p 64 N86-14881

BODY FLUIDS

Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853

Circulatory and thermoregulatory actions of hydration during exercise-heat stress [AD-A158440] p 63 N86-14875

A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine [AD-A159631] p 64 N86-14881

Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15888

BODY TEMPERATURE

Portable diagnostic radiometer [AD-A157685] p 62 N86-14872

Circulatory and thermoregulatory actions of hydration during exercise-heat stress [AD-A158440] p 63 N86-14875

A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas [AD-A158413] p 75 N86-14898

Human thermoregulatory responses to cold air are altered by repeated cold water immersion [AD-A158871] p 68 N86-15904

BONE MARROW

The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752

Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 56 N86-15877

BONE MINERAL CONTENT

Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation p 54 N86-14857

BOUNDARIES

Neural dynamics of perceptual grouping - Textures, boundaries, and emergent segmentations p 70 A86-17352

BRAIN

Brain asymmetry in animals — Russian book p 50 A86-17467

Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181

Biocybernetic analysis of a hybrid workload model [AD-A159033] p 63 N86-14860

Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model) p 66 N86-15887

C

CALCIFEROL

A maternal defect is responsible for growth failure in vitamin D-deficient rat pups p 52 A86-18398

Vitamin D-deficient rats produce reduced quantities of a nutritionally adequate milk p 52 A86-18399

1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400

Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 56 N86-15877

CALCIUM METABOLISM

A maternal defect is responsible for growth failure in vitamin D-deficient rat pups p 52 A86-18398

Vitamin D-deficient rats produce reduced quantities of a nutritionally adequate milk p 52 A86-18399

1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400

CANCER

Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data [CWI-AM-R8418] p 53 N86-14844

CANOPIES

Method of calculating angular dimensions of flight vehicle cockpit canopy casings p 76 N86-15886

CARBOHYDRATE METABOLISM

Increased gluconeogenesis in rats exposed to hyper-G stress p 52 A86-18397

CARBON COMPOUNDS

Amino acids of the Murchison meteorite. II - Five carbon acyclic primary beta-, gamma-, and delta-amino alkanoic acids p 77 A86-19126

CARBON DIOXIDE

Man's tolerance to fulminant form of hypoxic hypoxia p 66 N86-15879

CARBON MONOXIDE

Hemodynamic parameters as related to different tolerance to head-pelvis accelerations p 61 N86-14859

CARBONACEOUS CHONDRITES

Boundary structures are formed by organic components of the Murchison carbonaceous chondrite p 76 A86-18417

CARBONYL COMPOUNDS

Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine [AD-A158386] p 68 N86-15903

CARCINOGENS

Electron reactions in model and biological systems [DE85-016082] p 55 N86-15861

CARDIOGRAPHY

Automatic determination of cardiac output from rheogram of the trunk p 66 N86-15869

CARDIOVASCULAR SYSTEM

The effect of +Gz acceleration on cardiac volumes determined by two-dimensional echocardiography p 58 A86-18547

Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months p 54 N86-14856

Effect of level of physical activity on lipid metabolism of flight personnel p 65 N86-15871

CASING

Method of calculating angular dimensions of flight vehicle cockpit canopy casings p 76 N86-15886

CATECHOLAMINE

Investigation of catecholamine metabolism at high altitudes p 66 N86-15880

Human thermoregulatory responses to cold air are altered by repeated cold water immersion [AD-A158871] p 68 N86-15904

CATHODE RAY TUBES

Team performance with large and small screen displays [AD-A158761] p 75 N86-14899

CELL DIVISION

Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data [CWI-AM-R8418] p 53 N86-14844

CELLS (BIOLOGY)

Peptidoglycan envelope in the cyanelles of Glaucocystis nostochinearum p 51 A86-18029

Cellular effects of electromagnetic radiation [AD-A158547] p 63 N86-14878

Freezing of living cells [DE85-016297] p 55 N86-15862

Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man p 57 N86-15883

CENTRIFUGING STRESS

Increased gluconeogenesis in rats exposed to hyper-G stress p 52 A86-18397

CEREBROSPINAL FLUID

Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model) p 66 N86-15887

CHEMICAL COMPOSITION

Investigation of microflora of chufa, a potential higher plant component of biological life-support systems for man p 57 N86-15882

CHEMICAL EFFECTS

Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine [AD-A158386] p 68 N86-15903

CHEMICAL EVOLUTION

Molecular theory of evolution: Outline of a physico-chemical theory of the origin of life — Book p 76 A86-17623

Radiation chemistry of a multicomponent aqueous system relevant to chemistry of cometary nuclei p 77 A86-17740

Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807

CHEMOTHERAPY

Anti-trypanosomal activity of platinum coordination compounds [AD-D011860] p 67 N86-15897

CHILDREN

The Middle Latency Response (MLR) and Steady State Evoked Potential (SSEP) in neonates [AD-A158007] p 67 N86-15900

CHIRAL DYNAMICS

Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807

CHOLINE

Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869

CHRONIC CONDITIONS

The desensitisation of chronically motion sick aircrew in the Royal Air Force p 59 A86-18832

CIVIL AVIATION

Voice analyzer for evaluating pilot's condition p 64 N86-14886

CLINICAL MEDICINE

Additional pressurisation for treating nonresponding cases of serious air decompression sickness p 58 A86-18831

Biomaterials research in West Germany: An assessment [AD-A158951] p 53 N86-14840

Nystagmus as related to utricular function p 61 N86-14862

Significance of vestibular recruitment and directional dominance of nystagmus in diagnostic tests p 62 N86-14864

CLOSED ECOLOGICAL SYSTEMS

Biocidal synthetic coatings based on high-molecular metaloorganic compounds p 55 N86-14870

COASTAL ECOLOGY

Microbial mats and modern stromatolites in Shark Bay, Western Australia p 51 A86-18027

COATING

Biocidal synthetic coatings based on high-molecular metaloorganic compounds p 55 N86-14870

COCKPITS

Method of calculating angular dimensions of flight vehicle cockpit canopy casings p 76 N86-15886

COGNITION

Skill acquisition: Compilation of weak-method problem solutions [AD-A158725] p 70 N86-14886

Assessment of visuospatial abilities using complex cognitive tasks [AD-A158919] p 70 N86-14889

Moment by moment variation in the cognitive activity of experts [AD-A159466] p 71 N86-14893

COLD ACCLIMATIZATION

Human thermoregulatory responses to cold air are altered by repeated cold water immersion [AD-A158871] p 68 N86-15904

COLD WATER

Human thermoregulatory responses to cold air are altered by repeated cold water immersion [AD-A158871] p 68 N86-15904

COLOR VISION

Computational models of human vision with applications [NASA-CR-176413] p 67 N86-15896

COMET NUCLEI

Radiation chemistry of a multicomponent aqueous system relevant to chemistry of cometary nuclei p 77 A86-17740

COMMAND AND CONTROL

Team performance with large and small screen displays [AD-A158761] p 75 N86-14899

COMPARISON

Comparison of the Air Force female and male pilot grounded time in the Air Force Military Airlift Command [AD-A158093] p 68 N86-15902

COMPARTMENTS
A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine
[AD-A158631] p 64 N86-14861
COMPUTER PROGRAMS
A nonlinear regression procedure for evoked potential data analysis
[AD-A157680] p 53 N86-14839
Performance measurement guidelines for research
[AD-A158055] p 71 N86-14891
Automatic determination of cardiac output from rheogram of the trunk p 66 N86-15889
COMPUTER SYSTEMS DESIGN
Managing computer systems development: Understanding the human and technological imperatives
[AD-A158976] p 76 N86-15917
COMPUTER SYSTEMS PERFORMANCE
Systems of efficient man-computer interaction — Russian book p 74 A86-18730
COMPUTER SYSTEMS PROGRAMS
Managing computer systems development: Understanding the human and technological imperatives
[AD-A158976] p 76 N86-15917
COMPUTERIZED SIMULATION
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
A computer model of driver response
[UTIAS-293] p 72 N86-15911
A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912
CONFERENCES
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026
CONSUMABLES (SPACECREW SUPPLIES)
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
CONTACT LENSES
Wearing contact lenses in Space Shuttle operations p 60 A86-18845
CONTAMINATION
Biocidal synthetic coatings based on high-molecular metalloorganic compounds p 55 N86-14870
CONTOURS
Judgments of natural and anomalous trajectories in the presence and absence of motion p 69 A86-16922
CONTRAST
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
CONTROLLED ATMOSPHERES
Investigation of mineral nutrition of a new form of microalgae to be used in biological life-support systems p 57 N86-15892
CONVERGENCE
Stochastic differential equations for neuronal behavior
[AD-A159099] p 69 N86-15908
CORIOLIS EFFECT
Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861
CORONARY CIRCULATION
Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861
CORTISONE
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
COSMOCHEMISTRY
Boundary structures are formed by organic components of the Murchison carbonaceous chondrite p 76 A86-16417
CRITERIA
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897
CYBERNETICS
Biocybernetic analysis of a hybrid workload model
[AD-A159033] p 63 N86-14880
CYTOCHROMES
Application of electron-transfer theory to several systems of biological interest
[DE85-015835] p 55 N86-15860
CYTOGENESIS
Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 56 N86-15877
CYTOLOGY
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-18150

D

DATA PROCESSING
A nonlinear regression procedure for evoked potential data analysis
[AD-A157680] p 53 N86-14839
DATA REDUCTION
Reduction of subjective redundancy in image signals: Results obtained and research trends
[FUB-24-1984] p 64 N86-14884
DEATH
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158366] p 66 N86-15903
DECISION MAKING
A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912
DECOMPRESSION SICKNESS
Additional pressurisation for treating nonresponding cases of serious air decompression sickness p 58 A86-18831
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14866
DEHYDRATION
Circulatory and thermoregulatory actions of hydration during exercise-heat stress
[AD-A158440] p 63 N86-14875
DEOXYRIBONUCLEIC ACID
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data
[CWI-AM-R8418] p 53 N86-14844
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894
DESENSITIZING
The desensitisation of chronically motion sick aircrew in the Royal Air Force p 59 A86-18832
DESERTS
Alcohol effects on brain p 64 N86-14887
DESIGN ANALYSIS
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3
[AD-A158316] p 76 N86-15916
DETECTION
Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877
Theoretical and experimental analysis of pilot failure detection behavior during various automatic approach conditions
[NLR-MP-83025-U] p 72 N86-14895
DIAGNOSIS
Significance of vestibular recruitment and directional dominance of nystagmus in diagnostic tests p 62 N86-14864
Portable diagnostic radiometer
[AD-A157685] p 62 N86-14872
DIASTOLIC PRESSURE
Hemodynamic parameters as related to different tolerance to head-pelvis accelerations p 61 N86-14859
DIETS
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
DIFFERENTIAL EQUATIONS
A computer model of driver response
[UTIAS-293] p 72 N86-15911
DIGESTIVE SYSTEM
Investigations of the effects of gravity on Paramecium caudatum structure and behavior
[DFVLR-FB-85-40] p 56 N86-15863
DIHYDRIDES
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
DIMENSIONING
Method of calculating angular dimensions of flight vehicle cockpit canopy casings p 76 N86-15866
DISEASES
Foodborne and waterborne disease outbreaks. A compilation and subjective profile
[AD-A158536] p 63 N86-14876
DISPLAY DEVICES
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14896
Team performance with large and small screen displays
[AD-A158781] p 75 N86-14899
DISTRIBUTED PROCESSING
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14896
DIURETICS
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
DIVING (UNDERWATER)
Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867
DOGS
Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months p 54 N86-14858
DOSAGE
Benzodiazepine activity: Daytime effects and the sleep EEG
[AD-A158702] p 63 N86-14879
DRUGS
Anti-trypanosomal activity of platinum coordination compounds
[AD-D011860] p 67 N86-15897
DRYING
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
DYNAMIC RESPONSE
A computer model of driver response
[UTIAS-293] p 72 N86-15911
DYNAMICAL SYSTEMS
Muscle vibrations and man-machine system dynamics — Russian book p 74 A86-18731

E

EAR
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
EARTH ENVIRONMENT
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026
EATING
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
ECHOCARDIOGRAPHY
The effect of +Gz acceleration on cardiac volumes determined by two-dimensional echocardiography p 58 A86-18547
ECHOES
Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model) p 66 N86-15887
ECOLOGY
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026
ECOSYSTEMS
Microbial mats and modern stromatolites in Shark Bay, Western Australia p 51 A86-18027
EDUCATION
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
East Europe report: Science and technology
[JPRS-ESA-85-031] p 57 N86-15893
A comparison of the effects of circuit weight training on men and women
[AD-A159419] p 69 N86-15910
EFFERENT NERVOUS SYSTEMS
Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181
Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871
ELECTRIC POTENTIAL
Stochastic differential equations for neuronal behavior
[AD-A159099] p 69 N86-15908
ELECTRIC STIMULI
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
ELECTRICAL RESISTIVITY
Electron reactions in model and biological systems
[DE85-016062] p 55 N86-15861

ELECTRO-OPTICS
East Europe report: Science and technology [JPRS-ESA-86-031] p 57 N86-15893
ELECTROENCEPHALOGRAPHY
Age-related changes in electroencephalograms of pilots p 62 N86-14867
ELECTROLYTE METABOLISM
Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
ELECTROLYTES
Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15888
ELECTROMAGNETIC FIELDS
Likelihood of high rates of energy deposition in the human legs at the ANSI recommended 3-30-MHz RF safety levels p 58 A86-17918
Cellular effects of electromagnetic radiation [AD-A158547] p 63 N86-14878
ELECTROMAGNETIC RADIATION
Cellular effects of electromagnetic radiation [AD-A158547] p 63 N86-14878
ELECTRON BEAMS
Abrasion-resistant aluminized-coated aramid fabrics for manufacture of firefighters' protective clothing [AD-A157056] p 75 N86-14901
ELECTRON SCATTERING
Spin-dependent electron scattering from optically active molecules p 76 A86-18425
ELECTRON SPIN
Spin-dependent electron scattering from optically active molecules p 76 A86-18425
ELECTRON TRANSFER
Application of electron-transfer theory to several systems of biological interest [DE85-015835] p 55 N86-15860
Electron reactions in model and biological systems [DE85-016082] p 55 N86-15861
EMERGENCIES
One aspect of crew training p 72 N86-15885
ENDOCRINOLOGY
Modern concepts regarding some nonraditional neuroendocrine mechanisms of stress p 49 A86-16800
Endocrine correlates of susceptibility to motion sickness p 59 A86-18834
ENERGY DISTRIBUTION
Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807
ENVIRONMENT MANAGEMENT
Environmental management of payload processing facilities [AIAA PAPER 85-6067] p 73 A86-17602
ENVIRONMENT SIMULATION
Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867
ENZYME ACTIVITY
The effect of kallikrein on the development of a general adaptation syndrome p 49 A86-16751
Fibre-type specificity and effect of thyroid hormone on glucose 6-phosphate dehydrogenase activity in normal and denervated skeletal muscles of the rat p 49 A86-16901
Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902
EPIDEMIOLOGY
Foodborne and waterborne disease outbreaks. A compilation and subjective profile [AD-A158536] p 63 N86-14876
ERYTHROCYTES
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
ESTIMATES
An investigation of judgments of category frequency [AD-A159555] p 72 N86-14894
ETIOLOGY
Foodborne and waterborne disease outbreaks. A compilation and subjective profile [AD-A158536] p 63 N86-14876
EUROPE
Biological sciences and bioelectromagnetics in Europe [AD-A159221] p 53 N86-14841
EVALUATION
Assessment of visuospatial abilities using complex cognitive tasks [AD-A156919] p 70 N86-14889
EVOLUTION
Physiology/biochemistry of photoactivation of O2 evolution: Probes for the S-state protein [DE85-016834] p 53 N86-14843
EXERCISE PHYSIOLOGY
Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-18839
Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851
Pulmonary adaptation to high altitude [AD-A157894] p 62 N86-14873
Effect of 7-day immersion hypokinesia on characteristics of precision movements p 65 N86-15874
EXOBIOLOGY
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 4, July - August 1985 [JPRS-USB-86-006] p 58 N86-15865
EXPERIENCE
Experience and performance in video games and its influence on aptitude tests in aviation psychology [DFVLR-FB-85-43] p 73 N86-15915
EXPERIMENTATION
Variation in baseline sister chromatid exchange frequencies in humans [DE85-016084] p 64 N86-14883
EXPOSURE
A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas [AD-A158413] p 75 N86-14898
EYE MOVEMENTS
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351
Application of the system identification technique to goal-directed saccades [AD-A159102] p 69 N86-15909

F

FAST FOURIER TRANSFORMATIONS
Computational models of human vision with applications [NASA-CR-176413] p 67 N86-15898
FASTING
Effect of fasting on hypoxia tolerance of mice in relation to oxygen consumption and heart rate p 52 A86-18840
FATTY ACIDS
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891
FEMALES
Comparison of the Air Force female and male pilot grounded time in the Air Force Military Airlift Command [AD-A158093] p 68 N86-15902
A comparison of the effects of circuit weight training on men and women [AD-A159419] p 69 N86-15910
FLASH BLINDNESS
Potency of photoflash-produced retrograde amnesia in rats [AD-A159149] p 55 N86-15859
FLIGHT CREWS
The desensitisation of chronically motion sick aircrew in the Royal Air Force p 59 A86-18832
One aspect of crew training p 72 N86-15885
FLIGHT SIMULATION
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870
FLIGHT SIMULATORS
Performance measurement guidelines for research [AD-A159055] p 71 N86-14891
FLIGHT TIME
Comparison of the Air Force female and male pilot grounded time in the Air Force Military Airlift Command [AD-A158093] p 68 N86-15902
FLIGHT TRAINING
Performance measurement guidelines for research [AD-A159055] p 71 N86-14891
FLUORESCENCE
The role of reabsorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-16924
FLYING PERSONNEL
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
FOOD INTAKE
1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400
Tritium ingestion in rats p 58 N86-15895
FORTRAN
Performance measurement guidelines for research [AD-A159055] p 71 N86-14891
FREEZING
Freezing of living cells [DE85-016297] p 55 N86-15862

G

GAS CHROMATOGRAPHY
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891
GASES
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14868
GEOCENTRIC COORDINATES
Investigation of factors determining pilot's geocentric orientation p 72 N86-15888
GEOTROPISM
Investigations of the effects of gravity on Paramecium caudatum structure and behavior [DFVLR-FB-85-40] p 56 N86-15863
GERONTOLOGY
The geroprotective activity of 2,6-dimethyl 3,5-diethoxycarbonyl 1,4-dihydropyridine p 49 A86-16783
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
GLYCOGENS
Increased gluconeogenesis in rats exposed to hyper-G stress p 52 A86-18397
GLYCOLS
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
GOLD COATINGS
Abrasion-resistant aluminized-coated aramid fabrics for manufacture of firefighters' protective clothing [AD-A157056] p 75 N86-14901
GRAVITATIONAL EFFECTS
Investigations of the effects of gravity on Paramecium caudatum structure and behavior [DFVLR-FB-85-40] p 56 N86-15863
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 4, July - August 1985 [JPRS-USB-86-006] p 56 N86-15865
GRAVITATIONAL PHYSIOLOGY
Increased gluconeogenesis in rats exposed to hyper-G stress p 52 A86-18397
Contractile properties of rat muscle fibers during long-term exposure to +2 Gx accelerations p 54 N86-14858
GROWTH
1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400
Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man p 57 N86-15883

H

HALOPHILES
Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902
HEART FUNCTION
Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-18839
HEART RATE
Plasma norepinephrine, blood pressure and heart rate response to graded change in body position p 59 A86-18835
Effect of fasting on hypoxia tolerance of mice in relation to oxygen consumption and heart rate p 52 A86-18840
Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855
Hemodynamic parameters as related to different tolerance to head-pelvis accelerations p 61 N86-14859
Biocybernetic analysis of a hybrid workload model [AD-A159033] p 63 N86-14880
HEMATOLOGY
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-18150
HEMODYNAMIC RESPONSES
Hemodynamic responses to upright tilt at sea level and high altitude p 59 A86-18836
Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs p 52 A86-18841

HEMODYNAMICS

Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855

Hemodynamic parameters as related to different tolerance to head-pelvis accelerations p 61 N86-14859

HEMODYNAMICS

The effect of +Gz acceleration on cardiac volumes determined by two-dimensional echocardiography p 58 A86-18547

Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861

HEMOSTATICS

Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water p 61 N86-14854

HIERARCHIES

Skill acquisition: Compilation of weak-method problem solutions
[AD-A158725] p 70 N86-14888

HIGH ALTITUDE

Hemodynamic responses to upright tilt at sea level and high altitude p 59 A86-18836

Pulmonary adaptation to high altitude
[AD-A157894] p 62 N86-14873

Investigation of catecholamine metabolism at high altitudes p 66 N86-15880

HIGH ALTITUDE BREATHING

Pulmonary adaptation to high altitude
[AD-A157894] p 62 N86-14873

HIPPOCAMPUS

The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679

HISTAMINES

Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852

HISTOCHEMICAL ANALYSIS

Freezing of living cells
[DE85-016297] p 55 N86-15862

HOMEOSTASIS

The effect of kallikrein on the development of a general adaptation syndrome p 49 A86-16751

Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852

HOMOGENEITY

A general model for the homogeneous case of the continuous response
[AD-A159345] p 73 N86-15914

HORMONE METABOLISMS

Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18844

Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852

Individual differences in maximum oxygen uptake regulation and level p 62 N86-14863

HUMAN BEHAVIOR

A rule-based model of human problem-solving behavior in dynamic environments p 70 A86-17772

USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-024] p 64 N86-14885

Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892

HUMAN BEINGS

Variation in baseline sister chromatid exchange frequencies in humans
[DE85-016084] p 64 N86-14883

Man's tolerance to fulminant form of hypoxic hypoxia p 66 N86-15879

A comparison of the effects of circuit weight training on men and women
[AD-A159419] p 69 N86-15910

On looking into the black box: Prospects and limits in the search for mental models
[AD-A159080] p 73 N86-15913

HUMAN BODY

Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851

HUMAN FACTORS ENGINEERING

'Actions not as planned' in military air-traffic control p 70 A86-18546

Performance measurement guidelines for research
[AD-A159055] p 71 N86-14891

Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897

Human-machine interface in mobile teleoperators
[DE85-013639] p 75 N86-14900

Problems of studying flight work in Soviet aviation medicine of the 1920's - 1930's p 65 N86-15866

Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 9
[AD-A158316] p 76 N86-15916

HUMAN PATHOLOGY

Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18844

Significance of vestibular recruitment and directional dominance of nystagmus in diagnostic tests p 52 N86-14864

HUMAN PERFORMANCE

A rule-based model of human problem-solving behavior in dynamic environments p 70 A86-17772

Benzodiazepine activity: Daytime effects and the sleep EEG
[AD-A158702] p 63 N86-14879

Performance measurement guidelines for research
[AD-A159055] p 71 N86-14891

Team performance with large and small screen displays
[AD-A158761] p 75 N86-14899

USSR report: Space Biology and Aerospace Medicine, volume 19, no. 4, July - August 1985
[JPRS-USB-85-006] p 56 N86-15865

Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867

Some effects of alcohol and simulated altitude on complex performance scores and breathanalyzer readings
[AD-A158625] p 68 N86-15905

A comparison of the effects of circuit weight training on men and women
[AD-A159419] p 69 N86-15910

HUMAN TOLERANCES

Neutron effects in humans: Protection considerations
[DE85-015047] p 64 N86-14882

HYDROLYSIS

Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902

HYDROTHERMAL SYSTEMS

Mesophilic manganese-oxidizing bacteria from hydrothermal discharge areas at 21 deg North on the East Pacific Rise p 51 A86-18032

Thermophilic archaebacteria occurring in submarine hydrothermal areas p 51 A86-18034

HYPERBARIC CHAMBERS

Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs p 52 A86-18841

HYPERCAPNIA

Hypoxic and hypercapnic sensitivity as a reflection of individual human reactivity p 58 A86-18753

HYPEROXIA

Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs p 52 A86-18841

Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847

HYPERTENSION

Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water p 61 N86-14854

Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855

HYPERTHERMIA

Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18838

HYPOKINESIA

USSR report: Space Biology and Aerospace Medicine, volume 19, no. 5, September - October 1985
[JPRS-USB-85-007] p 54 N86-14848

Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851

Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852

Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853

Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months p 54 N86-14856

Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869

Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871

Investigation of some aspects of human amino acid metabolism during 120-day antiorthostatic hypokinesia p 65 N86-15873

Effect of 7-day immersion hypokinesia on characteristics of precision movements p 65 N86-15874

Intensity of lipid peroxidation in hypokinetic rat tissues p 56 N86-15876

Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 58 N86-15877

HYPOTHERMIA

Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-18837

A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas
[AD-A159413] p 75 N86-14898

Human thermoregulatory responses to cold air are altered by repeated cold water immersion
[AD-A158871] p 66 N86-15904

HYPOXEMIA

Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894

HYPOXIA

Hypoxic and hypercapnic sensitivity as a reflection of individual human reactivity p 58 A86-18753

Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-18839

Effect of fasting on hypoxia tolerance of mice in relation to oxygen consumption and heart rate p 52 A86-18840

Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18844

Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861

Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871

Pulmonary adaptation to high altitude
[AD-A157894] p 62 N86-14873

Man's tolerance to fulminant form of hypoxic hypoxia p 66 N86-15879

I

IMAGE ANALYSIS

Reduction of subjective redundancy in image signals: Results obtained and research trends
[FUB-24-1984] p 64 N86-14884

IMAGE PROCESSING

Reduction of subjective redundancy in image signals: Results obtained and research trends
[FUB-24-1984] p 64 N86-14884

Computational models of human vision with applications
[NASA-CR-176413] p 67 N86-15898

Binocular image flows: Steps toward stereo - motion fusion
[AD-A158069] p 67 N86-15901

IMMOBILIZATION

Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 58 N86-15877

IMMUNOASSAY

Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877

IMMUNOLOGY

Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877

IMPACT ACCELERATION

A nonlinear regression procedure for evoked potential data analysis
[AD-A157680] p 53 N86-14839

Statistical research on problems of biodynamics
[AD-A157993] p 67 N86-15899

IMPURITIES

Functional state of the olfactory analyzer in a pressurized environment p 66 N86-15890

INFORMATION FLOW

Human-machine interface in mobile teleoperators
[DE85-013639] p 75 N86-14900

INFORMATION RETRIEVAL

A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912

INFORMATION SYSTEMS

Managing computer systems development: Understanding the human and technological imperatives
[AD-A158976] p 76 N86-15917

INGESTION (BIOLOGY)

Tritium ingestion in rats p 58 N86-15895

INHIBITION

Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902

INJURIES

A nonlinear regression procedure for evoked potential data analysis
[AD-A157680] p 53 N86-14839

INSECTS
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158986] p 68 N86-15903
INSTRUMENT APPROACH
Theoretical and experimental analysis of pilot failure detection behavior during various automatic approach conditions
[NLR-MP-83025-U] p 72 N86-14895
INTERNATIONAL COOPERATION
East Europe report: Science and technology
[JPRS-ESA-85-031] p 57 N86-15893
IONIZATION
Neutron effects in humans: Protection considerations
[DE85-015047] p 64 N86-14882
IRRADIATION
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation
p 54 N86-14847
Studies concerned with basic radiation protection criteria and studies concerned with guidance and information
[AD-A158319] p 63 N86-14874
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86 15894
IRRITATION
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158986] p 68 N86-15903

J

JUDGMENTS
An investigation of judgments of category frequency
[AD-A159555] p 72 N86-14894

K

KINETIC EQUATIONS
Application of screw calculus to the evaluation of manipulator workspace
[AD-P004947] p 75 N86-14946
KNOWLEDGE
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771

L

LEARNING
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
LEG (ANATOMY)
Likelihood of high rates of energy deposition in the human legs at the ANSI recommended 3-30-MHz RF safety levels p 58 A86-17918
LEUKOCYTES
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-19150
LIFE SCIENCES
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-004] p 54 N86-14845
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-024] p 64 N86-14885
LIFE SPAN
The geroprotective activity of 2,6-dimethyl 3,5-diethoxycarbonyl 1,4-dihydropyridine
p 49 A86-16783
LIFE SUPPORT SYSTEMS
Biocidal synthetic coatings based on high-molecular metalloorganic compounds p 55 N86-14870
Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man
p 57 N86-15883
Investigation of mineral nutrition of a new form of microalgae to be used in biological life-support systems
p 57 N86-15892
LIMNOLOGY
Recovery of viable thermoactinomyces vulgaris and other aerobic heterotropic thermophiles from a varved sequence of ancient lake sediment p 51 A86-19030
Aspects of the biogeochemistry of Big Soda Lake, Nevada p 51 A86-19031
LINEAR PROGRAMMING
A computer model of driver response
[UTIAS-293] p 72 N86-15911
LINEAR SYSTEMS
Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892
LINGUISTICS
Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892
LIPID METABOLISM
Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water
p 61 N86-14854
Effect of level of physical activity on lipid metabolism of flight personnel p 65 N86-15871
LIPIDS
Intensity of lipid peroxidation in hypokinetic rat tissues
p 56 N86-15876
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891
LIVER
Plasma volume and estimated liver plasma flow during hyperbaric and hyperoxic exposures in awake dogs
p 52 A86-18841
LOGISTICS
A general model for the homogeneous case of the continuous response
[AD-A159045] p 73 N86-15914
LONG TERM EFFECTS
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 5, September - October 1985
[JPRS-USB-86-007] p 54 N86-14848
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months
p 54 N86-14856
Contractile properties of rat muscle fibers during long-term exposure to +2 Gx accelerations
p 54 N86-14858
Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871
Basic results of experiments with long-term rotation of rats as applied to the problem of artificial gravity
p 56 N86-15878
LUMINANCE
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351
LYMPHOCYTES
Variation in baseline sister chromatid exchange frequencies in humans
[DE85-015064] p 64 N86-14883

M

MAGNESIUM ISOTOPES
Changes in physicochemical properties of contractile and regulatory proteins in different types of muscles during and after exposure to accelerations p 61 N86-14860
MAN MACHINE SYSTEMS
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
A rule-based model of human problem-solving behavior in dynamic environments p 70 A86-17772
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
Pilots of the future - Human or computer?
p 74 A86-18541
Systems of efficient man-computer interaction — Russian book p 74 A86-18730
Muscle vibrations and man-machine system dynamics — Russian book p 74 A86-18731
Team performance with large and small screen displays
[AD-A158781] p 75 N86-14899
Human-machine interface in mobile teleoperators
[DE85-013638] p 75 N86-14900
A computer model of driver response
[UTIAS-293] p 72 N86-15911
On looking into the black box: Prospects and limits in the search for mental models
[AD-A159080] p 73 N86-15913
MANAGEMENT INFORMATION SYSTEMS
Managing computer systems development: Understanding the human and technological imperatives
[AD-A158976] p 76 N86-15917
MANIPULATORS
Application of screw calculus to the evaluation of manipulator workspace
[AD-P004947] p 75 N86-14946
MARINE BIOLOGY
The role of resorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-16924
Mesophilic manganese-oxidizing bacteria from hydrothermal discharge areas at 21 deg North on the East Pacific Rise p 51 A86-18032
Thermophilic archaebacteria occurring in submarine hydrothermal areas p 51 A86-18034
MEDICAL EQUIPMENT
Portable diagnostic radiometer
[AD-A157665] p 62 N86-14872
MEDICAL SCIENCE
Biomaterials research in West Germany: An assessment
[AD-A158951] p 53 N86-14840
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation
p 54 N86-14857
Individual differences in maximum oxygen uptake regulation and level p 62 N86-14863
MEMBRANES
Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902
Investigation of mineral nutrition of a new form of microalgae to be used in biological life-support systems
p 57 N86-15892
MEMORY
Visual perception and memory: Information processes and neuron mechanisms — Russian book
p 52 A86-18744
Potency of photoflash-produced retrograde amnesia in rats
[AD-A159149] p 55 N86-15859
A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912
MENTAL PERFORMANCE
Neural dynamics of perceptual grouping - Textures, boundaries, and emergent segmentations
p 70 A86-17352
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
Visual perception and memory: Information processes and neuron mechanisms — Russian book
p 52 A86-18744
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
An investigation of judgments of category frequency
[AD-A159555] p 72 N86-14894
On looking into the black box: Prospects and limits in the search for mental models
[AD-A159080] p 73 N86-15913
MESOPHILES
Mesophilic manganese-oxidizing bacteria from hydrothermal discharge areas at 21 deg North on the East Pacific Rise p 51 A86-18032
METABOLISM
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary
[AD-A159512] p 53 N86-14842
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
Investigation of some aspects of human amino acid metabolism during 120-day antiorthostatic hypokinesia
p 65 N86-15873
Investigation of catecholamine metabolism at high altitudes p 66 N86-15880
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881
Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man
p 57 N86-15883
Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15888
METALLIC GLASSES
East Europe report: Science and technology
[JPRS-ESA-85-031] p 57 N86-15893
METEORITIC COMPOSITION
Boundary structures are formed by organic components of the Murchison carbonaceous chondrite
p 76 A86-16417
Amino acids of the Murchison meteorite. II - Five carbon acyclic primary beta-, gamma-, and delta-amino alkanoic acids p 77 A86-19126
MICE
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data
[CWI-AM-R8418] p 53 N86-14844
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation
p 54 N86-14847

MICROBIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-USB-85-004] p 54 N86-14845
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881
Investigation of microflora of chufa, a potential higher plant component of biological life-support systems for man p 57 N86-15882
MICROORGANISMS
Microbial mats and modern stromatolites in Shark Bay, Western Australia p 51 A86-18027
Biocidal synthetic coatings based on high-molecular metalorganic compounds p 55 N86-14870
Investigation of microflora of chufa, a potential higher plant component of biological life-support systems for man p 57 N86-15882
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891
MICROWAVE RADIOMETERS
Portable diagnostic radiometer
[AD-A157685] p 62 N86-14872
MICROWAVES
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-18150
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary
[AD-A158512] p 53 N86-14842
MIDDLE EAR
Further studies on the application of the compartmentalization/airlock concept to aircraft and spacecraft p 53 A86-18842
MILITARY AVIATION
'Actions not as planned' in military air-traffic control p 70 A86-18546
Inflight loss of consciousness. II p 58 A86-18548
MILITARY OPERATIONS
Performance measurement guidelines for research
[AD-A158055] p 71 N86-14891
MILITARY VEHICLES
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897
MILK
Vitamin D-deficient rats produce reduced quantities of a nutritionally adequate milk p 52 A86-18399
MINERALS
Parity-violating energy differences of chiral minerals and the origin of biomolecular homochirality p 77 A86-17807
MOISTURE CONTENT
On the effects of X irradiation on the Bacillus subtilis spores in a dry and wet system
[DFVLR-FB-85-44] p 56 N86-15864
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
MOLECULAR BIOLOGY
Spin-dependent electron scattering from optically active molecules p 76 A86-16425
Molecular theory of evolution: Outline of a physico-chemical theory of the origin of life — Book p 76 A86-17623
MONKEYS
Neurophysiological bases of event-related potentials
[AD-A158997] p 71 N86-14890
MOTION PERCEPTION
Judgments of natural and anomalous trajectories in the presence and absence of motion p 69 A86-16822
Enhancing visual sensitivity
[AD-A158799] p 68 N86-15906
MOTION SICKNESS
The desensitisation of chronically motion sick aircrew in the Royal Air Force p 59 A86-18832
Self-control of psychophysiologic response to motion stress Using biofeedback to treat sickness p 70 A86-18833
Statistical research on problems of biodynamics
[AD-A157993] p 67 N86-15899
MOTION SICKNESS DRUGS
Endocrine correlates of susceptibility to motion sickness p 59 A86-18834
MULTIVARIATE STATISTICAL ANALYSIS
Performance measurement guidelines for research
[AD-A159055] p 71 N86-14891
MURCHISON METEORITE
Amino acids of the Murchison meteorite. II - Five carbon acyclic primary beta-, gamma-, and delta-amino alkanoic acids p 77 A86-19126
MUSCULAR FATIGUE
Pulmonary adaptation to high altitude
[AD-A157684] p 62 N86-14873
MUSCULAR FUNCTION
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754
Muscle vibrations and man-machine system dynamics — Russian book p 74 A86-18731
Effect of 7-day immersion hypokinesia on characteristics of precision movements p 65 N86-15874
MUSCULAR STRENGTH
Changes in physicochemical properties of contractile and regulatory proteins in different types of muscles during and after exposure to accelerations p 61 N86-14860
Application of the system identification technique to goal-directed saccades
[AD-A159102] p 69 N86-15909
A comparison of the effects of circuit weight training on men and women
[AD-A159419] p 69 N86-15910
MUSCULOSKELETAL SYSTEM
Fibre-type specificity and effect of thyroid hormone on glucose 6-phosphate dehydrogenase activity in normal and denervated skeletal muscles of the rat p 49 A86-16901
Contractile properties of rat muscle fibers during long-term exposure to +2 Gx accelerations p 54 N86-14858
MUTAGENS
Electron reactions in model and biological systems
[DE85-016062] p 55 N86-15861
MUTATIONS
Electron reactions in model and biological systems
[DE85-016062] p 55 N86-15861
MYOCARDIUM
Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months p 54 N86-14856

N

NERVOUS SYSTEM
Nystagmus as related to utricular function p 61 N86-14862
NEUROLOGY
Brain asymmetry in animals — Russian book p 50 A86-17467
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847
Nystagmus as related to utricular function p 61 N86-14862
NEUROMUSCULAR TRANSMISSION
Individual differences in maximum oxygen uptake regulation and level p 62 N86-14883
Application of the system identification technique to goal-directed saccades
[AD-A159102] p 69 N86-15909
NEURONS
Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181
Stochastic differential equations for neuronal behavior
[AD-A159099] p 69 N86-15908
Application of the system identification technique to goal-directed saccades
[AD-A159102] p 69 N86-15909
NEUROPHYSIOLOGY
Modern concepts regarding some nontraditional neuroendocrine mechanisms of stress p 49 A86-16800
Neural dynamics of perceptual grouping - Textures, boundaries, and emergent segmentations p 70 A86-17352
Brain asymmetry in animals — Russian book p 50 A86-17467
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
Visual perception and memory: Information processes and neuron mechanisms — Russian book p 52 A86-18744
Voice analyzer for evaluating pilot's condition p 64 N86-14886
Neurophysiological bases of event-related potentials
[AD-A158997] p 71 N86-14890
NEUTRONS
Neutron effects in humans: Protection considerations
[DE85-015047] p 64 N86-14882
NITROGEN
Man's tolerance to fulminant form of hypoxic hypoxia p 66 N86-15879
Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man p 57 N86-15883
NORepinephrine
Plasma norepinephrine, blood pressure and heart rate response to graded change in body position p 59 A86-18835
NUTRITION
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
NUTRITIONAL REQUIREMENTS
A maternal defect is responsible for growth failure in vitamin D-deficient rat pups p 52 A86-18398
Vitamin D-deficient rats produce reduced quantities of a nutritionally adequate milk p 52 A86-18399
1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
NYSTAGMUS
Nystagmus as related to utricular function p 61 N86-14862

O

ODORS
Functional state of the olfactory analyzer in a pressurized environment p 66 N86-15890
OPERATOR PERFORMANCE
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
'Actions not as planned' in military air-traffic control p 70 A86-18546
Systems of efficient man-computer interaction — Russian book p 74 A86-18730
Muscle vibrations and man-machine system dynamics — Russian book p 74 A86-18731
OPHTHALMOLOGY
Wearing contact lenses in Space Shuttle operations p 60 A86-18845
OPTICAL ACTIVITY
Spin-dependent electron scattering from optically active molecules p 76 A86-16425
ORBITAL SPACE STATIONS
Human roles in future space systems
[AAS PAPER 84-117] p 73 A86-17320
ORGANIC COMPOUNDS
Dicyclohexylcarbodiimide-sensitive ATPase in Halobacterium saccharovorum p 49 A86-16902
ORGANOMETALLIC COMPOUNDS
Biocidal synthetic coatings based on high-molecular metalorganic compounds p 55 N86-14870
ORTHOSTATIC TOLERANCE
Plasma norepinephrine, blood pressure and heart rate response to graded change in body position p 59 A86-18835
Hemodynamic responses to upright tilt at sea level and high altitude p 59 A86-18836
Investigation of some aspects of human amino acid metabolism during 120-day antiorthostatic hypokinesia p 65 N86-15873
OXIDATION
Intensity of lipid peroxidation in hypokinetic rat tissues p 56 N86-15876
OXIDIZERS
Mesophilic manganese-oxidizing bacteria from hydrothermal discharge areas at 21 deg North on the East Pacific Rise p 51 A86-18032
Autotrophic and mixotrophic growth and metabolism of some moderately thermoacidophilic iron-oxidizing bacteria p 51 A86-18033
OXYGEN CONSUMPTION
Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-18839
Effect of fasting on hypoxia tolerance of mice in relation to oxygen consumption and heart rate p 52 A86-18840
Individual differences in maximum oxygen uptake regulation and level p 62 N86-14883
Oxygenation and regional circulation in gingival mucosal tissues under effect of head-to-pelvis (+Gz) accelerations p 65 N86-15872

P

PALEOBIOLOGY
Boundary structures are formed by organic components of the Murchison carbonaceous chondrite
p 76 A86-16417
PANCREAS
The effect of kallikrein on the development of a general adaptation syndrome p 49 A86-16751
PARALLEL PROCESSING (COMPUTERS)
Binocular image flows: Steps toward stereo - motion fusion
[AD-A158069] p 67 N86-15901
PARAMECIA
Investigations of the effects of gravity on Paramecium caudatum structure and behavior
[DFVLR-FB-85-40] p 56 N86-15863
PARASITIC DISEASES
Anti-trypanosomal activity of platinum coordination compounds
[AD-D011880] p 67 N86-15897
PARTIAL DIFFERENTIAL EQUATIONS
Stochastic differential equations for neuronal behavior
[AD-A159099] p 69 N86-15906
PENTOSE
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
PEPTIDES
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
PERFORMANCE PREDICTION
Application of screw calculus to the evaluation of manipulator workspace
[AD-P004947] p 75 N86-14946
PERFORMANCE TESTS
Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892
PEROXIDES
Intensity of lipid peroxidation in hypokinetic rat tissues
p 56 N86-15876
PERSONNEL SELECTION
System developed for psychological selection of AT controllers p 69 A86-17062
Experience and performance in video games and its influence on aptitude tests in aviation psychology
[DFVLR-FB-85-43] p 73 N86-15915
PERSPIRATION
Circulatory and thermoregulatory actions of hydration during exercise-heat stress
[AD-A158440] p 63 N86-14875
PHARMACOLOGY
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14868
PHOSPHORYLATION
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754
PHOTOCHEMICAL REACTIONS
Physiology/biochemistry of photoactivation of O2 evolution: Probes for the S-state protein
[DE85-016834] p 53 N86-14843
PHOTOSYNTHESIS
Application of electron-transfer theory to several systems of biological interest
[DE85-015835] p 55 N86-15860
PHYSICAL CHEMISTRY
Changes in physicochemical properties of contractile and regulatory proteins in different types of muscles during and after exposure to accelerations p 61 N86-14860
Individual differences in maximum oxygen uptake regulation and level p 62 N86-14863
PHYSICAL EXERCISE
Circulatory and thermoregulatory actions of hydration during exercise-heat stress
[AD-A158440] p 63 N86-14875
PHYSIOCHEMISTRY
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754
PHYSIOLOGICAL ACCELERATION
Increased gluconeogenesis in rats exposed to hyper-G stress p 52 A86-18397
Hemodynamic parameters as related to different tolerance to head-pelvis accelerations
p 61 N86-14859
Changes in physicochemical properties of contractile and regulatory proteins in different types of muscles during and after exposure to accelerations p 61 N86-14860
Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861
PHYSIOLOGICAL EFFECTS
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-18150
Neutron effects in humans: Protection considerations
[DE85-015047] p 64 N86-14882
Alcohol effects on brain p 64 N86-14887
Basic results of experiments with long-term rotation of rats as applied to the problem of artificial gravity
p 56 N86-15878
One aspect of crew training p 72 N86-15885
PHYSIOLOGICAL RESPONSES
The effect of kallikrein on the development of a general adaptation syndrome p 49 A86-16751
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
Hypoxic and hypercapnic sensitivity as a reflection of individual human reactivity p 58 A86-16753
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754
Modern concepts regarding some nontraditional neuroendocrine mechanisms of stress
p 49 A86-16800
Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181
Inflight loss of consciousness. II p 58 A86-18548
Self-control of psychophysiologic response to motion stress Using biofeedback to treat sickness
p 70 A86-18833
Endocrine correlates of susceptibility to motion sickness p 59 A86-18834
Plasma norepinephrine, blood pressure and heart rate response to graded change in body position
p 59 A86-18835
Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18836
Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months
p 54 N86-14856
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation
p 54 N86-14857
Contractile properties of rat muscle fibers during long-term exposure to +2 Gx accelerations
p 54 N86-14858
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871
Circulatory and thermoregulatory actions of hydration during exercise-heat stress
[AD-A158440] p 63 N86-14875
The Middle Latency Response (MLR) and Steady State Evoked Potential (SSEP) in neonates
[AD-A158007] p 67 N86-15900
PILOT PERFORMANCE
Voice analyzer for evaluating pilot's condition
p 64 N86-14886
Theoretical and experimental analysis of pilot failure detection behavior during various automatic approach conditions
[NLR-MP-83025-U] p 72 N86-14895
Problems of studying flight work in Soviet aviation medicine of the 1920's - 1930's p 65 N86-15866
Investigation of factors determining pilot's geocentric orientation p 72 N86-15868
Effect of threat stress on psychomotor stability of pilots differing in anxiety level p 72 N86-15869
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870
Effect of level of physical activity on lipid metabolism of flight personnel p 65 N86-15871
PILOTS (PERSONNEL)
Age-related changes in electroencephalograms of pilots p 62 N86-14867
Voice analyzer for evaluating pilot's condition
p 64 N86-14886
Comparison of the Air Force female and male pilot grounded time in the Air Force Military Airlift Command
[AD-A158093] p 68 N86-15902
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
PIPES (TUBES)
Judgments of natural and anomalous trajectories in the presence and absence of motion p 69 A86-16922
PLANKTON
The role of reabsorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-16924
PLANTS (BOTANY)
Investigation of microflora of chufa, a potential higher plant component of biological life-support systems for man p 57 N86-15882
PLATELETS
Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water
p 61 N86-14854
PLATINUM COMPOUNDS
Anti-trypanosomal activity of platinum coordination compounds
[AD-D011880] p 67 N86-15897
PORTABLE EQUIPMENT
Portable diagnostic radiometer
[AD-A157685] p 62 N86-14872
PRELAUNCH TESTS
Environmental management of payload processing facilities
[AIAA PAPER 85-6067] p 73 A86-17602
PRESSURIZED CABINS
Functional state of the olfactory analyzer in a pressurized environment p 66 N86-15890
PRESSURIZING
Additional pressurisation for treating nonresponding cases of serious air decompression sickness
p 58 A86-16831
PROBABILITY DENSITY FUNCTIONS
A general model for the homogeneous case of the continuous response
[AD-A159345] p 73 N86-15914
PROBABILITY THEORY
A general model for the homogeneous case of the continuous response
[AD-A159345] p 73 N86-15914
PROBLEM SOLVING
A rule-based model of human problem-solving behavior in dynamic environments p 70 A86-17772
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
Skill acquisition: Compilation of weak-method problem solutions
[AD-A158725] p 70 N86-14888
Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892
A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912
PROCESS CONTROL (INDUSTRY)
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
PRODUCTION ENGINEERING
PLANT - An experimental task for the study of human problem solving in process control — Production Levels and Network Troubleshooting p 70 A86-17774
PROTECTION
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158386] p 68 N86-15903
PROTECTIVE CLOTHING
Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-18837
A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas
[AD-A158413] p 75 N86-14896
Abrasion-resistant aluminized-coated aramid fabrics for manufacture of firefighters' protective clothing
[AD-A157056] p 75 N86-14901
PROTEIN METABOLISM
Physiology/biochemistry of photoactivation of O2 evolution: Probes for the S-state protein
[DE85-016834] p 53 N86-14843
Changes in physicochemical properties of contractile and regulatory proteins in different types of muscles during and after exposure to accelerations p 61 N86-14860
PSYCHOLOGICAL FACTORS
Moment by moment variation in the cognitive activity of experts
[AD-A159466] p 71 N86-14893
An investigation of judgments of category frequency
[AD-A159555] p 72 N86-14894
Problems of studying flight work in Soviet aviation medicine of the 1920's - 1930's p 65 N86-15866
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3
[AD-A158316] p 76 N86-15916
PSYCHOLOGICAL TESTS
System developed for psychological selection of AT controllers p 69 A86-17062
An investigation of judgments of category frequency
[AD-A159555] p 72 N86-14894
PSYCHOLOGY
Syllogistic reasoning tasks, a methodological review
[AD-A159190] p 71 N86-14892

PSYCHOMOTOR PERFORMANCE
Effect of threat stress on psychomotor stability of pilots differing in anxiety level p 72 N86-15869
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870
Experience and performance in video games and its influence on aptitude tests in aviation psychology [DFVLR-FB-85-43] p 73 N86-15915
PSYCHOPHYSIOLOGY
Self-control of psychophysiologic response to motion stress Using biofeedback to treat sickness p 70 A86-18833
Enhancing visual sensitivity [AD-A158799] p 68 N86-15906
PSYCHOTROPIC DRUGS
Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18838
PUBLIC HEALTH
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-024] p 64 N86-14885
PULMONARY FUNCTIONS
Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-18839
Pulmonary adaptation to high altitude [AD-A157864] p 62 N86-14873
PULSES
Electron reactions in model and biological systems [DE85-018062] p 55 N86-15861

R

RADIATION CHEMISTRY
Radiation chemistry of a multicomponent aqueous system relevant to chemistry of cometary nuclei p 77 A86-17740
RADIATION DAMAGE
On the effects of X irradiation on the Bacillus subtilis spores in a day and wet system [DFVLR-FB-85-44] p 56 N86-15864
RADIATION DOSAGE
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
Changes in the morphofunctional and cytochemical indices of blood leukocytes after exposure to low-intensity microwave radiation p 52 A86-18150
Studies concerned with basic radiation protection criteria and studies concerned with guidance and information [AD-A158319] p 63 N86-14874
Neutron effects in humans: Protection considerations [DE85-015047] p 64 N86-14882
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894
RADIATION EFFECTS
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513
Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18838
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary [AD-A159512] p 53 N86-14842
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-024] p 64 N86-14885
RADIATION HAZARDS
Likelihood of high rates of energy deposition in the human legs at the ANSI recommended 3-30-MHz RF safety levels p 58 A86-17918
Studies concerned with basic radiation protection criteria and studies concerned with guidance and information [AD-A158319] p 63 N86-14874
RADIATION PROTECTION
Studies concerned with basic radiation protection criteria and studies concerned with guidance and information [AD-A158319] p 63 N86-14874
Neutron effects in humans: Protection considerations [DE85-015047] p 64 N86-14882
RADIATION TOLERANCE
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847
On the effects of X irradiation on the Bacillus subtilis spores in a day and wet system [DFVLR-FB-85-44] p 56 N86-15864
RADIO WAVES
Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18838
RADIOBIOLOGY
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
Likelihood of high rates of energy deposition in the human legs at the ANSI recommended 3-30-MHz RF safety levels p 58 A86-17918
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847
East Europe report: Science and technology [JPRS-ESA-85-001] p 57 N86-15893
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894
RATS
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary [AD-A159512] p 53 N86-14842
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation p 54 N86-14857
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14868
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869
Potency of photoflash-produced retrograde amnesia in rats [AD-A159149] p 55 N86-15859
Intensity of lipid peroxidation in hypokinetic rat tissues p 56 N86-15876
Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 56 N86-15877
Basic results of experiments with long-term rotation of rats as applied to the problem of artificial gravity p 56 N86-15878
Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15888
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894
Tritium ingestion in rats p 58 N86-15896
REACTION KINETICS
Application of electron-transfer theory to several systems of biological interest [DE85-015835] p 55 N86-15860
REACTION TIME
Neurophysiological bases of event-related potentials [AD-A158997] p 71 N86-14890
RECTENNAS
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513
REDUNDANCY
Reduction of subjective redundancy in image signals: Results obtained and research trends [FUB-24-1984] p 64 N86-14884
REFLEXES
Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871
REGRESSION ANALYSIS
A nonlinear regression procedure for evoked potential data analysis [AD-A157680] p 53 N86-14839
REMOTE CONTROL
CNES of France researches remote control system for space p 75 N86-15444
REMOTE SENSING
The role of reabsorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-18924
RENAL FUNCTION
Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853
RESEARCH
Biomaterials research in West Germany: An assessment [AD-A158951] p 53 N86-14840
RESEARCH MANAGEMENT
Biomaterials research in West Germany: An assessment [AD-A158951] p 53 N86-14840
RESPIRATORY PHYSIOLOGY
Hypoxic and hypercapnic sensitivity as a reflection of individual human reactivity p 58 A86-16753
RETINA
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
Computational models of human vision with applications [NASA-CR-176413] p 67 N86-15898
RHEOENCEPHALOGRAPHY
Oxygenation and regional circulation in gingival mucosal tissues under effect of head-to-pelvis (+Gz) accelerations p 65 N86-15872
RHEOLOGY
Automatic determination of cardiac output from rheogram of the trunk p 66 N86-15889
RISK
Studies concerned with basic radiation protection criteria and studies concerned with guidance and information [AD-A158319] p 63 N86-14874
ROBOTS
Application of screw calculus to the evaluation of manipulator workspace [AD-P004947] p 75 N86-14948
ROCKET LAUNCHERS
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3 [AD-A158316] p 76 N86-15916
ROTATING ENVIRONMENTS
Basic results of experiments with long-term rotation of rats as applied to the problem of artificial gravity p 56 N86-15878
RULES
A rule-based model of human problem-solving behavior in dynamic environments p 70 A86-17772

S

SACCADIC EYE MOVEMENTS
Application of the system identification technique to goal-directed saccades [AD-A159102] p 69 N86-15909
SALYUT SPACE STATION
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881
SATELLITE POWER TRANSMISSION (TO EARTH)
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513
SCIENTISTS
Moment by moment variation in the cognitive activity of experts [AD-A159466] p 71 N86-14893
SCREENS
Team performance with large and small screen displays [AD-A158761] p 75 N86-14899
SEA LEVEL
Hemodynamic responses to upright tilt at sea level and high altitude p 59 A86-18836
SEBACEOUS GLANDS
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891
SEDATIVES
Benzodiazepine activity: Daytime effects and the sleep EEG [AD-A158702] p 63 N86-14879
SEDIMENTS
Recovery of viable thermoactinomyces vulgaris and other aerobic heterotropic thermophiles from a varved sequence of ancient lake sediment p 51 A86-18030
SENSITIVITY
Hypoxic and hypercapnic sensitivity as a reflection of individual human reactivity p 58 A86-16753
Enhancing visual sensitivity [AD-A158799] p 68 N86-15906
SENSORIMOTOR PERFORMANCE
Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181
SENSORY DEPRIVATION
Fibre-type specificity and effect of thyroid hormone on glucose 6-phosphate dehydrogenase activity in normal and denervated skeletal muscles of the rat p 49 A86-16901
SEROTONIN
Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852
SHIPS
A comparison of the effects of circuit weight training on men and women [AD-A159419] p 69 N86-15910
SHOCK TESTS
Potency of photoflash-produced retrograde amnesia in rats [AD-A159149] p 55 N86-15859
SIMULATION
Experience and performance in video games and its influence on aptitude tests in aviation psychology [DFVLR-FB-85-43] p 73 N86-15915
SKIN (ANATOMY)
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891

SKIN TEMPERATURE (BIOLOGY)
Human thermoregulatory responses to cold air are altered by repeated cold water immersion
[AD-A158871] p 68 N86-15904
SLEEP
Benzodiazepine activity: Daytime effects and the sleep EEG
[AD-A158702] p 63 N86-14879
SPACE ENVIRONMENT SIMULATION
Radiation chemistry of a multicomponent aqueous system relevant to chemistry of cometary nuclei
p 77 A86-17740
SPACE FLIGHT
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607
SPACE FLIGHT FEEDING
Hygenic aspects of regular diet of flight personnel
p 60 N86-14849
SPACE PERCEPTION
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
SPACE SHUTTLE ORBITERS
Environmental management of payload processing facilities
[AIAA PAPER 85-6067] p 73 A86-17602
SPACE SHUTTLE PAYLOADS
Environmental management of payload processing facilities
[AIAA PAPER 85-6067] p 73 A86-17602
SPACE SHUTTLES
Wearing contact lenses in Space Shuttle operations
p 60 A86-16845
SPACE TRANSPORTATION SYSTEM
Environmental management of payload processing facilities
[AIAA PAPER 85-6067] p 73 A86-17602
SPACEBORNE EXPERIMENTS
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607
SPACECRAFT CABINS
Further studies on the application of the compartmentalization/airlock concept to aircraft and spacecraft p 53 A86-18842
SPACECRAFT CONTAMINATION
Environmental management of payload processing facilities
[AIAA PAPER 85-6067] p 73 A86-17602
SPACECRAFT CONTROL
CNES of France researches remote control system for space p 75 N86-15444
SPACECRAFT ENVIRONMENTS
Functional state of the olfactory analyzer in a pressurized environment p 66 N86-15890
SPACECREWS
Human roles in future space systems
[AAS PAPER 84-117] p 73 A86-17320
SPACELAB PAYLOADS
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607
SPEECH RECOGNITION
Voice analyzer for evaluating pilot's condition
p 64 N86-14886
SPERMATOGENESIS
Tritium ingestion in rats p 58 N86-15895
SPINE
Combined effects of stressors on the level of spinal reflex arc structures p 62 N86-14871
STATISTICAL ANALYSIS
Statistical research on problems of biodynamics
[AD-A157993] p 67 N86-15899
STEREOSCOPIC VISION
Binocular image flows: Steps toward stereo - motion fusion
[AD-A158089] p 67 N86-15901
STIMULI
Neurophysiological bases of event-related potentials
[AD-A158997] p 71 N86-14890
STOCHASTIC PROCESSES
Stochastic differential equations for neuronal behavior
[AD-A159099] p 69 N86-15906
STRESS (PHYSIOLOGY)
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752
Modern concepts regarding some nontraditional neuroendocrine mechanisms of stress
p 49 A86-16800
Self-control of psychophysiologic response to motion stress Using biofeedback to treat sickness
p 70 A86-16833
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation
p 54 N86-14857
Intensity of lipid peroxidation in hypokinetic rat tissues
p 56 N86-15876
STRESS (PSYCHOLOGY)
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 4, July - August 1985
[JPRS-USB-85-006] p 56 N86-15885
STRESS ANALYSIS
Effect of threat stress on psychomotor stability of pilots differing in anxiety level p 72 N86-15889
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870
SUBMERGING
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
SURFACE TO SURFACE ROCKETS
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3
[AD-A158316] p 76 N86-15916
SWIMMING
One aspect of crew training p 72 N86-15885
SWINE
A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine
[AD-A159631] p 64 N86-14881
SYNAPSES
Individual differences in maximum oxygen uptake regulation and level p 62 N86-14863
SYSTEM EFFECTIVENESS
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3
[AD-A158316] p 76 N86-15916
SYSTEM FAILURES
Theoretical and experimental analysis of pilot failure detection behavior during various automatic approach conditions
[NLR-MP-83025-U] p 72 N86-14895
SYSTEMS ENGINEERING
Managing computer systems development: Understanding the human and technological imperatives
[AD-A158976] p 76 N86-15917
SYSTOLIC PRESSURE
Hemodynamic parameters as related to different tolerance to head-pelvis accelerations
p 61 N86-14859

T

TARGET RECOGNITION
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351
TASKS
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
TEAMS
Team performance with large and small screen displays
[AD-A158761] p 75 N86-14899
TECHNOLOGICAL FORECASTING
Pilots of the future - Human or computer?
p 74 A86-18541
TECHNOLOGY TRANSFER
East Europe report: Science and technology
[JPRS-ESA-85-031] p 57 N86-15893
TELEOPERATORS
Human-machine interface in mobile teleoperators
[DE85-013639] p 75 N86-14900
TEXTURES
Neural dynamics of perceptual grouping - Textures, boundaries, and emergent segmentations
p 70 A86-17352
THERMOPHILES
Recovery of viable thermoactinomyces vulgaris and other aerobic heterotropic thermophiles from a varved sequence of ancient lake sediment p 51 A86-18030
Autotrophic and mixotrophic growth and metabolism of some moderately thermoacidophilic iron-oxidizing bacteria p 51 A86-18033
Thermophilic archaebacteria occurring in submarine hydrothermal areas p 51 A86-18034
THERMOREGULATION
Effects of psychotropic drugs on thermal responses to radiofrequency radiation p 59 A86-18838
Human thermoregulatory responses to cold air are altered by repeated cold water immersion
[AD-A158871] p 68 N86-15904
THICKNESS
Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-18837
THREAT EVALUATION
Effect of threat stress on psychomotor stability of pilots differing in anxiety level p 72 N86-15889
THREE DIMENSIONAL MOTION
Binocular image flows: Steps toward stereo - motion fusion
[AD-A158089] p 67 N86-15901
THYROID GLAND
Fibre-type specificity and effect of thyroid hormone on glucose 6-phosphate dehydrogenase activity in normal and denervated skeletal muscles of the rat
p 49 A86-16901
TISSUES (BIOLOGY)
Intensity of lipid peroxidation in hypokinetic rat tissues
p 56 N86-15876
TOLERANCES (PHYSIOLOGY)
The effect of kallikrein on the development of a general adaptation syndrome p 49 A86-16751
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary
[AD-A159512] p 53 N86-14842
Drugs and surfactants used to prevent caisson disease in rats p 54 N86-14866
Man's tolerance to fulminant form of hypoxic hypoxia
p 66 N86-15879
Investigation of catecholamine metabolism at high altitudes p 66 N86-15880
TOXIC HAZARDS
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158386] p 68 N86-15903
TOXINS AND ANTITOXINS
Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877
TRAINING DEVICES
Performance measurement guidelines for research
[AD-A159055] p 71 N86-14891
TRAINING EVALUATION
Experience and performance in video games and its influence on aptitude tests in aviation psychology
[DFVLR-FB-85-43] p 73 N86-15915
TRAJECTORIES
Judgments of natural and anomalous trajectories in the presence and absence of motion p 69 A86-16922
TRITIUM
Tritium ingestion in rats p 58 N86-15895
TUMORS
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data
[CWI-AM-R8416] p 53 N86-14844

U

U.S.S.R.
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-004] p 54 N86-14845
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-024] p 64 N86-14885
ULTRASONICS
Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model)
p 66 N86-15887
UNCONSCIOUSNESS
Inflight loss of consciousness. II p 58 A86-18548

V

VACCINES
Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877
VARIABILITY
Variation in baseline sister chromatid exchange frequencies in humans
[DE85-016084] p 64 N86-14883
VERTIGO
Significance of vestibular recruitment and directional dominance of nystagmus in diagnostic tests
p 62 N86-14864
VESTIBULAR NYSTAGMUS
Significance of vestibular recruitment and directional dominance of nystagmus in diagnostic tests
p 62 N86-14864

VIABILITY
On the effects of X irradiation on the Bacillus subtilis spores in a dry and wet system
[DFVLR-FB-85-44] p 56 N86-15864
VIBRATION ISOLATORS
Muscle vibrations and man-machine system dynamics --- Russian book p 74 A86-16731
VISIBILITY
Investigation of factors determining pilot's geocentric orientation p 72 N86-15868
VISION
Reduction of subjective redundancy in image signals: Results obtained and research trends
[FUB-24-1984] p 64 N86-14864
VISUAL DISCRIMINATION
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
Enhancing visual sensitivity
[AD-A158799] p 68 N86-15906
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
VISUAL FIELDS
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351
VISUAL FLIGHT
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
VISUAL PERCEPTION
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351
Neural dynamics of perceptual grouping - Textures, boundaries, and emergent segmentations p 70 A86-17352
Visual perception and memory: Information processes and neuron mechanisms --- Russian book p 52 A86-18744
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889
Investigation of factors determining pilot's geocentric orientation p 72 N86-15868
Computational models of human vision with applications
[NASA-CR-176413] p 67 N86-15898
Binocular image flows: Steps toward stereo - motion fusion
[AD-A158069] p 67 N86-15901
Enhancing visual sensitivity
[AD-A158799] p 68 N86-15906
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
VOICE COMMUNICATION
Voice analyzer for evaluating pilot's condition p 64 N86-14886
VOICE CONTROL
Voice analyzer for evaluating pilot's condition p 64 N86-14886

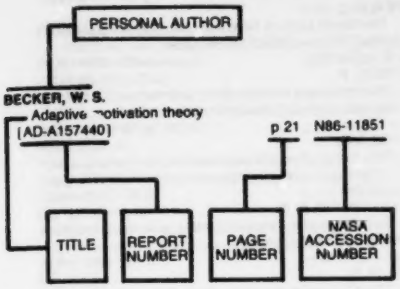
W

WATER
Physiology/biochemistry of photoactivation of O2 evolution: Probes for the S-state protein
[DE85-016834] p 53 N86-14843
Tritium ingestion in rats p 58 N86-15895
WATER IMMERSION
Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-18837
A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas
[AD-A158413] p 75 N86-14898
Effect of 7-day immersion hypokinesia on characteristics of precision movements p 65 N86-15874
Human thermoregulatory responses to cold air are altered by repeated cold water immersion
[AD-A158871] p 68 N86-15904
WATER LANDING
One aspect of crew training p 72 N86-15885
WEIGHT (MASS)
A comparison of the effects of circuit weight training on men and women
[AD-A159419] p 69 N86-15910
WEIGHTLESSNESS
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851
Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852
Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853
Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water p 61 N86-14854
Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation p 54 N86-14857
Contractile properties of rat muscle fibers during long-term exposure to +2 Gx accelerations p 54 N86-14858
Hemodynamic parameters as related to different tolerance to head-pelvis accelerations p 61 N86-14859
Effect of dry immersion model on parameters of fluid-electrolyte metabolism, blood plasma aldosterone and cortisol levels in individuals differing in body fluid content p 65 N86-15875
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881
Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15886
WEIGHTLESSNESS SIMULATION
Investigations of the effects of gravity on Paramecium caudatum structure and behavior
[DFVLR-FB-85-40] p 56 N86-15863
Effect of 7-day immersion hypokinesia on characteristics of precision movements p 65 N86-15874
WIND SHEAR
Theoretical and experimental analysis of pilot failure detection behavior during various automatic approach conditions
[NLR-MP-83025-U] p 72 N86-14895
WORK CAPACITY
Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867
Effect of level of physical activity on lipid metabolism of flight personnel p 65 N86-15871
WORKLOADS (PSYCHOPHYSIOLOGY)
'Actions not as planned' in military air-traffic control p 70 A86-16546
Biocybernetic analysis of a hybrid workload model
[AD-A159033] p 63 N86-14880
Problems of studying flight work in Soviet aviation medicine of the 1920's - 1930's p 65 N86-15866
Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867
Effect of threat stress on psychomotor stability of pilots differing in anxiety level p 72 N86-15869
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870
Effect of level of physical activity on lipid metabolism of flight personnel p 65 N86-15871
WORKSTATIONS
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14896

X

X RAY IRRADIATION
On the effects of X irradiation on the Bacillus subtilis spores in a dry and wet system
[DFVLR-FB-85-44] p 56 N86-15864
X RAYS
Advances in radiobiological research: Hypoxic irradiation effects p 57 N86-15894

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABRAMOV, M. M.
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847

ALLAN, J. R.
Immersion cooling - Effect of clothing and skinfold thickness p 59 A86-16837

ALLEN, G. L.
Assessment of visuospatial abilities using complex cognitive tasks
[AD-A158919] p 70 N86-14889

ANDERSEN, H. T.
Analyses of maximum cardiopulmonary performance during exposure to acute hypoxia at simulated altitude - Sea level to 5000 meters (760-404 mm Hg) p 60 A86-16839

ANDERSON, J. R.
Skill acquisition: Compilation of weak-method problem solutions
[AD-A158725] p 70 N86-14888

ANDERSON, K.
Judgments of natural and anomalous trajectories in the presence and absence of motion p 69 A86-16922

ANDREW, M.
Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-16844

ANTONYAN, A. A.
Investigation of distinctions referable to growth, development and metabolism of Closteriopsis acicularis algae when cells are limited in nitrogen as related to biological life-support systems for man p 57 N86-15883

ARKHIPOV, V. V.
Oxygenation and regional circulation in gingival mucosal tissues under effect of head-to-pelvis (+Gz) accelerations p 65 N86-15872

ARTAMASOVA, Y. M.
Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853

ASHWORTH, L. K.
Variation in baseline sister chromatid exchange frequencies in humans
[DE85-016084] p 64 N86-14883

ATAULLAKHANOV, F. I.
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850

ATEN, J.
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data
[CWI-AM-R8418] p 53 N86-14844

AVETISYANTS, B. L.
Gas chromatographic analysis of free fatty acids of skin surface lipids p 67 N86-15891

AZAMAR, J. A.
Radiation chemistry of a multicomponent aqueous system relevant to chemistry of cometary nuclei p 77 A86-17740

B

BAGDOEVA, A. M.
Muscle vibrations and man-machine system dynamics p 74 A86-18731

BAGSHAW, M.
The desensitisation of chronically motion sick aircrew in the Royal Air Force p 59 A86-16832

BAKALE, G.
Electron reactions in model and biological systems
[DE85-016062] p 55 N86-15861

BARBEITO, R.
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351

BATTISTA, S. P.
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513

BAZUNOVA, Y. G.
Investigation of possibility of using two-frequency impedometry for estimation of proportion of total and extracellular body fluids p 66 N86-15888

BEDELL, H. E.
Precision and accuracy of oculocentric direction for targets of different luminances p 58 A86-17351

BEDNENKO, V. S.
Cumulative effect of coriolis accelerations on coronary hemodynamics p 61 N86-14861

BELAKOVSKIY, M. B.
Investigation of catecholamine metabolism at high altitudes p 66 N86-15880

BELAKOVSKIY, M. S.
Effect of 24,25-dihydroxycholecalciferol on amino acid metabolism of hypokinetic rats p 55 N86-14869

BELOUSOVA, O. I.
The effect of auricular electric stimulation on myelopeptide production and early reactions of blood systems cell populations in the presence of immobilization stress p 49 A86-16752

BENTON, E. V.
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679

BERGTER, F.
Determination of increment of Bacillus subtilis biomass in weightlessness p 57 N86-15881

BIANKI, V. L.
Brain asymmetry in animals p 50 A86-17467

BIRGERSSON, G.
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14896

BLACK, S.
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679

BLOMQUIST, R. N.
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14896

BODROV, V. A.
Use of flight simulators for demonstration of functional capacities of flight personnel p 72 N86-15870

BOGDANOVA, N. N.
Informativeness of echo signal in pulsed ultrasonography of the brain (with use of model) p 66 N86-15887

BOSSONE, C. A.
A multi-isotope procedure for simultaneously estimating the volume of body fluid compartments of swine
[AD-A159631] p 64 N86-14881

BOWMAN, G.
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607

BRANTOVA, S. S.
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850

BRATUS, N. V.
Responses of cat red-nucleus neurons to auditory signals p 52 A86-18181

BRENNEMAN, R.
Abrasion-resistant aluminized-coated aramid fabrics for manufacture of firefighters' protective clothing
[AD-A157056] p 75 N86-14901

BRIERLEY, C. L.
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026

BRIERLEY, J. A.
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026

BROMMAGE, R.
A maternal defect is responsible for growth failure in vitamin D-deficient rat pups p 52 A86-18398
Vitamin D-deficient rats produce reduced quantities of a nutritionally adequate milk p 52 A86-18399
1,25-dihydroxyvitamin D3 normalizes maternal food consumption and pup growth in rats p 52 A86-18400

BROWN, C. E.
Team performance with large and small screen displays
[AD-A158761] p 75 N86-14899

BRYANTSEVA, L. A.
Some aspects of determining human physical work capacity under hyperbaric conditions p 76 N86-15867

BUKALOV, Y. Y.
Investigation of factors determining pilot's geocentric orientation p 72 N86-15868

BURAVKOVA, L. B.
Some results of a study of the bioenergetics of rat muscle in weightlessness p 49 A86-16754

BURKOVSKAYA, T. Y.
Effect of 24,25-dihydroxyvitamin D3 on osteogenetic precursor cells in immobilized rats p 56 N86-15877

BURNS, K. C.
Statistical research on problems of biodynamics
[AD-A157993] p 67 N86-15899

BYMAN, D.
The effect of a microwave radiation (2.45 GHz CW) on the molt of house finches (Carpodacus Mexicanus) p 52 A86-18513

C

CALDWELL, D. E.
Planetary ecology; Proceedings of the Sixth International Symposium on Environmental Biogeochemistry, Santa Fe, NM, October 10-14, 1983 p 50 A86-18026

CALLAHAN, P. X.
Ames Research Center life sciences payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 85-6092] p 50 A86-17607

CAMPBELL, D. M.
Spin-dependent electron scattering from optically active molecules p 76 A86-16425

CARRANO, A. V.
Variation in baseline sister chromatid exchange frequencies in humans
[DE85-016084] p 64 N86-14883

CARUTHERS, C. M.
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation [ANL-84-100] p 74 N86-14896
CHABDAROVA, R. H.
Man's tolerance to fulminant form of hypoxic hypoxia p 66 N86-15879
CHACON, M.
Fibre-type specificity and effect of thyroid hormone on glucose 6-phosphate dehydrogenase activity in normal and denervated skeletal muscles of the rat p 49 A86-16901
CHAMBERS, A. B.
Pilots of the future - Human or computer? p 74 A86-18541
CHATTERJEE, I.
Likelihood of high rates of energy deposition in the human legs at the ANSI recommended 3-30-MHz RF safety levels p 58 A86-17918
CHENIAE, G. M.
Physiology/biochemistry of photoactivation of O2 evolution: Probes for the S-state protein [DE85-016834] p 53 N86-14843
CHOU, C. K.
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary [AD-A156512] p 53 N86-14842
CHRISTENSEN, S. K.
Stochastic differential equations for neuronal behavior [AD-A159099] p 69 N86-15906
CHUGUNOVA, L. G.
Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851
COATES, G.
Hypoxia-induced vasopressin release and coagulopathy in a normal subject p 60 A86-18544
COLLINS, D. J.
The role of reabsorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-16924
COLLINS, W. E.
Some effects of alcohol and simulated altitude on complex performance scores and breathanalyzer readings [AD-A156925] p 66 N86-15905
CORBETT, R.
The effect of high energy (HZE) particle radiation (Ar-40) on aging parameters of mouse hippocampus and retina p 50 A86-17679
CRONIN, J. R.
Amino acids of the Murchison meteorite. II - Five carbon acyclic primary beta-, gamma-, and delta-amino alkanoic acids p 77 A86-19126
CROWLEY, J.
Effects of long-term low-level radiofrequency radiation exposure on rats. Volume 9: Summary [AD-A156512] p 53 N86-14842
CRUMLEY, L. M.
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2 [AD-A158312] p 74 N86-14897
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3 [AD-A158316] p 76 N86-15916

Anti-trypanosomal activity of platinum coordination compounds
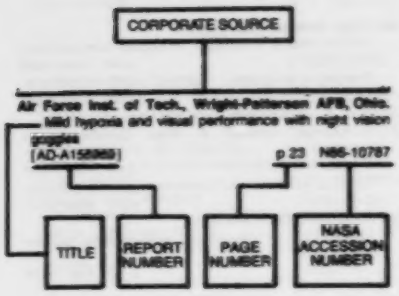
[AD-D011880] p 67 N88-15897

Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
Team performance with large and small screen displays
[AD-A158781] p 75 N86-14899
Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
The Middle Latency Response (MLR) and Steady State Evoked Potential (SSEP) in neonates
[AD-A158007] p 67 N86-15900
Comparison of the Air Force female and male pilot grounded time in the Air Force Military Airlift Command
[AD-A158093] p 68 N86-15902
A computer model of case-based reasoning in problem solving: An investigation in the domain of dispute mediation
[AD-A158097] p 73 N86-15912
Argonne National Lab., Ill.
The Scientific Workstation Evaluation Project: Multidisciplinary experience with a scientific workstation
[ANL-84-100] p 74 N86-14898
Arizona State Univ., Tempe.
Amino acids of the Murchison meteorite. II - Five carbon acyclic primary beta-, gamma-, and delta-amino alkanoic acids p 77 A86-19126
Army Environmental Hygiene Agency, Aberdeen Proving Ground, Md.
Topical hazard evaluation program of Candidate Insect repellent AI3-35770 Hexahydro-1-((2-Methylcyclohexyl) Carbonyl)-1-H-Azepine
[AD-A158366] p 68 N86-15903
Army Research Inst. for the Behavioral and Social Sciences, Alexandria, Va.
An investigation of judgments of category frequency
[AD-A158555] p 72 N86-14894
Human factors engineering design criteria for future systems. Design criteria evolving from the Fire Support Team Vehicle (FIST-V) operational test 2
[AD-A158312] p 74 N86-14897
Human factors engineering design criteria for future systems. Report number 3: Design criteria evolving from the Multiple Multiple Rocket System (MLRS) operational test 3
[AD-A158318] p 76 N86-15916
Army Research Inst. of Environmental Medicine, Natick, Mass.
Circulatory and thermoregulatory actions of hydration during exercise-heat stress
[AD-A158440] p 63 N86-14875
Human thermoregulatory responses to cold air are altered by repeated cold water immersion
[AD-A158671] p 68 N86-15904

B

Behavioral Research Associates, West Lafayette, Ind.,
Biocybernetic analysis of a hybrid workload model
[AD-A159033] p 63 N86-14880
Borriston Research Labs, Inc. Temple Hills, Md.
Development of vaccines to the mycotoxin T-2
[AD-A158544] p 63 N86-14877
Boston Univ., Mass.
Microbial mats and modern stromatolites in Shark Bay, Western Australia p 51 A86-18027
Brookhaven National Lab., Upton, N. Y.
Application of electron-transfer theory to several systems of biological interest
[DE85-015835] p 55 N86-15860

C

California Inst. of Tech., Pasadena.
Application of electron-transfer theory to several systems of biological interest
[DE85-015835] p 55 N86-15860
Carnegie-Mellon Univ., Pittsburgh, Pa.
Skill acquisition: Compilation of weak-method problem solutions
[AD-A158725] p 70 N86-14888
Case Western Reserve Univ., Cleveland, Ohio.
Electron reactions in model and biological systems
[DE85-018062] p 55 N86-15861
Center for Mathematics and Computer Science, Amsterdam (Netherlands).
Quantitative models describing the kinetics of tumor cell proliferation: A comparison to experimental data
[CWI-AM-R8418] p 53 N86-14844
Clarke Ambrose, Inc., Knoxville, Tenn.
Human-machine interface in mobile teleoperators
[DE85-013639] p 75 N86-14900
Coast Guard, Washington, D.C.
A comparison of the protection against immersion hypothermia provided by Coast Guard anti-exposure clothing in calm versus rough seas
[AD-A158413] p 75 N86-14896
Colorado Univ., Boulder.
Moment by moment variation in the cognitive activity of experts
[AD-A159466] p 71 N86-14893

D

Dalhousie Univ., Halifax (Nova Scotia).
Visual sensitivities and discriminations and their roles in aviation
[AD-A158962] p 69 N86-15907
David Sarnoff Research Center, Princeton, N.J.
Portable diagnostic radiometer
[AD-A157885] p 62 N86-14872
Department of the Army, Washington, D. C.
Anti-trypanosomal activity of platinum coordination compounds
[AD-D011660] p 67 N86-15897
Desmatics, Inc., State College, Pa.
A nonlinear regression procedure for evoked potential data analysis
[AD-A157680] p 53 N86-14839
Statistical research on problems of biodynamics
[AD-A157999] p 67 N86-15899
Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Cologne (West Germany).
Investigations of the effects of gravity on Paramecium caudatum structure and behavior
[DFVLR-FB-85-40] p 56 N86-15863
On the effects of X irradiation on the Bacillus subtilis spores in a dry and wet system
[DFVLR-FB-85-44] p 56 N86-15864
Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Hamburg (West Germany).
Experience and performance in video games and its influence on aptitude tests in aviation psychology
[DFVLR-FB-85-43] p 73 N86-15915

F

Federal Aviation Administration, Washington, D.C.
Some effects of alcohol and simulated altitude on complex performance scores and breathanalyzer readings
[AD-A158925] p 68 N86-15905
Fondazione Ugo Bordoni, Rome (Italy).
Reduction of subjective redundancy in image signals: Results obtained and research trends
[FUB-24-1984] p 64 N86-14884

G

Georgia Inst. of Tech., Atlanta.
The effects of type of knowledge upon human problem solving in a process control task p 74 A86-17771
PLANT - An experimental task for the study of human problem solving in process control p 70 A86-17774
On looking into the black box: Prospects and limits in the search for mental models
[AD-A159080] p 73 N86-15913

J

Jet Propulsion Lab., California Inst. of Tech., Pasadena.
The role of reabsorption in the spectral distribution of phytoplankton fluorescence emission p 50 A86-18924
Joint Publications Research Service, Arlington, Va.
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-004] p 54 N86-14845
Radiosensitivity of animals irradiated in modified gas medium: Modification of cerebral syndrome in mice by hypoxic hypoxia and hyperoxia during irradiation p 54 N86-14847
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 5, September - October 1985
[JPRS-USB-85-007] p 54 N86-14848
Hygenic aspects of regular diet of flight personnel p 60 N86-14849
Metabolic distinctions of human red blood during long-term spaceflights p 60 N86-14850
Human body biomechanics and movements after 120-day antiorthostatic hypokinesia p 60 N86-14851
Functional activity of human serotoninergic and histaminergic systems during long-term antiorthostatic hypokinesia p 60 N86-14852
Body position during hypokinesia, and fluid-electrolyte metabolism p 60 N86-14853
Microcirculation and cellular hemostasis in men with borderline arterial hypertension submitted to neutral-temperature dry immersion in water p 61 N86-14854
Effect of positive pressure breathing on hemodynamics in patients with borderline hypertension submitted to water immersion p 61 N86-14855
Roentgenological and pathomorphological changes in heart of dogs submitted to hypokinesia for six months p 54 N86-14856
Changes in physical condition, vestibular function and bone system of rats submitted to long-term rotation p 54 N86-14857

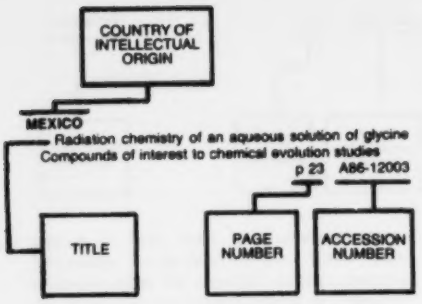
Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

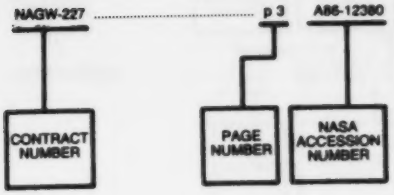
Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

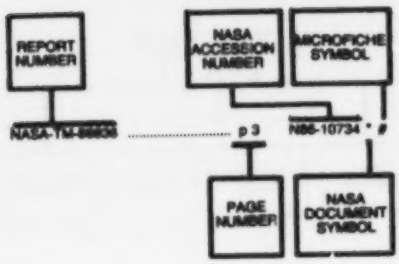
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

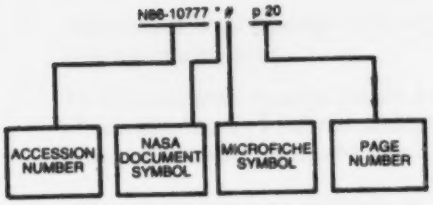
REPORT

Typical Accession Number Index Listing



Listings in this index are arranged alpha-numerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page vii.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 284)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in April 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1986
National Aeronautics and Space Administration
Washington, DC

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A04.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 148 reports, articles and other documents announced during April 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 79
Includes genetics.

Category 52 Aerospace Medicine 85
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 94
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 96
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 101
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1
Contract Number Index E-1
Report Number Index F-1
Accession Number Index G-1

A86-19300
THE EFFECT OF A WEAK VARIABLE ULTRALOW-FREQUENCY MAGNETIC FIELD ON THE DEVELOPMENT OF HYPERCOAGULATION SYNDROME IN RATS CAUSED BY RESTRICTED MOBILITY [VLIIANIE SLABOGO PEREMENNOGO MAGNITNOGO POLIA SVERKHNIZKOI CHASTOTY NA RAZVITIE GIPERKOAGULIATSIONNOGO SINDROMA PRI OGRANICHENII PODVIZHNOSTI U KRYS]
N. A. TEMURIANTS and A. V. MIKHAILOV (Simferopol'skii Gosudarstvennyi Universitet, Simferopol, Ukrainian SSR) Biofizika (ISSN 0006-3029), vol. 30, Nov.-Dec. 1985, p. 1046-1049. In Russian. refs

The effect of daily 3-h exposures to a variable magnetic field (VMF) of 8 Hz frequency and 4 A/m field intensity on the hemocoagulation system was studied in rats kept in conditions of either standard, i.e., unrestricted, mobility regime (SMR) or prolonged hypokinesia (HK). Two-week long HK has led to an increase in fibrin content, decreased time of plasma recalcification, decreased fibrinolytic activity, and other shifts indicative of the hypercoagulation syndrome, while prolonged exposures (for 2 to 3 weeks) to VMF of SMR rats caused shifts of these plasma coagulation parameters, relative to control rats (SMR, no VMF), indicative of the hypocoagulation syndrome. Five to nine daily exposures of HK rats to the VMF regime has led to the reversal of all indices of the initial hypercoagulation syndrome to the point of normalization by the 21st day. I.S.

A86-19963*# National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
AMES RESEARCH CENTER LIFE SCIENCES PAYLOAD - OVERVIEW OF RESULTS OF A SPACEFLIGHT OF 24 RATS AND 2 MONKEYS
P. X. CALLAHAN, C. SCHATTE, R. E. GRINDELAND (NASA, Ames Research Center, Moffett Field, CA), W. A. LENCKI, G. A. FUNK (NASA, Ames Research Center; GE Management and Technical Services Co., Moffett Field, CA) et al. AIAA, Aerospace Sciences Meeting, 24th, Reno, NV, Jan. 6-9, 1986. 11 p.
(AIAA PAPER 86-0583)

A hardware description and experimental results are reported from the initial STS flight carrying two Research Animal Holding Facility (RAHF) units. The flight was mainly intended for engineering check-out of the RAHF design. The system development and prelaunch preparations are briefly summarized, including the provisions of retrieval teams at alternate landing sites and extensive rehearsals to ensure timely data analysis. The flight revealed a problem with the containment of particulates from the RAHFs and the provision of adequate water for the monkeys. On-board films showed that one of the monkeys experienced motion sickness, from which he recovered after 5 days in space. Necropsy of the subject rats documented suppressed interferon production, loss of muscle mass, an up to 13 percent loss in bone mass (after a one week flight), and a 20 percent decrease in growth-inducing hormone. The volume of data collected is thought to exceed the combined data gathered on all previous U.S. space missions. M.S.K.

A86-20001* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
VOLUME AND DENSITY CHANGES OF BIOLOGICAL FLUIDS WITH TEMPERATURE
H. HINGHOFER-SZALKAY (NASA, Ames Research Center, Moffett Field, CA; Graz, Universitaet, Austria) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Dec. 1985, p. 1686-1689. refs
(Contract FFWF PROJECT 4200)

The thermal expansion of human blood, plasma, ultrafiltrate, and erythrocycte concentration at temperatures in the range of 4-48 C is studied. The mechanical oscillator technique which has an accuracy of 1 x 10 to the -5 th g/ml is utilized to measure fluid density. The relationship between thermal expansion, density, and temperature is analyzed. The study reveals that: (1) thermal expansion increases with increasing temperature; (2) the magnitude of the increase declines with increasing temperature; (3) thermal expansion increases with density at temperatures below 40 C; and (4) the thermal expansion of intracellular fluid is greater than that of extracellular fluid in the temperature range of 4-10 C, but it is equal at temperatures greater than or equal to 40 C. I.F.

A86-20005
VENTILATORY RESPONSES OF HAMSTERS AND RATS TO HYPOXIA AND HYPERCAPNIA
B. R. WALKER, E. M. ADAMS, and N. F. VOELKEL (Tulane University, New Orleans, LA; Colorado, University, Denver) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Dec. 1985, p. 1955-1960. refs

The experimental conditions and measurement techniques are described. The results of the experiment for the normoxic group (30 percent O2) reveal that the tidal volume (VT)/100 g is greater, and the respiratory frequency (f) is lower in hamsters than rats, and the minute ventilation (VE)/100 g in the hamsters is less than the rats. For the hamsters in the hypercapnia environment (5 percent CO2) an increase in VE/100 g through VT, which is less significant than the VE/100 g increase in rats, is observed. The VE/100 g increase for the hamsters and rats in the hypoxic environment (10 percent O2) are the same; however, the hamsters increase is through f and the rats through both VT/100 g and f. The relation between f and metabolic rate is analyzed and the hamsters response to the hypercapnic environment is examined. It is concluded that the response of the hamsters to hypercapnic and hypoxic conditions is significantly different from the rats, which may reflect a genetic adaptation to the fossorial habitat. I.F.

A86-20404* Northrop Services, Inc., Houston, Tex.
REGULATION OF HEMATOPOIESIS IN RATS EXPOSED TO ANTIORTHOSTATIC HYPOKINETIC/HYPODYNAMIA. II - MECHANISMS OF THE 'ANEMIA'
C. D. R. DUNN, P. C. JOHNSON, and R. D. LANGE (NASA, Johnson Space Center; Northrop Services, Inc., Life Sciences Laboratory; Baylor University, Houston, TX; Tennessee, University, Knoxville) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 36-44. refs
(Contract NAGW-308; NAS9-15425; NAS2-10801; NAS2-11586; NAS9-14662)

The cause of the red cell mass (RCM) deficit, which occurs in rats during suspenion, is investigated. The experimental conditions and procedures, in which male Sprague-Dawley rats are subjected to antiorthostatic hyypokinetic/hypodynamia and changes in RCM are monitored, are described. The influences of stress, reduced food and water consumption, and antiorhostatic posture on RCM are analyzed. Changes in body weight, RCM, radioiron incorporation, red blood cells (RBC), and reticulocytes, for the rats after head-down suspension are graphically presented; only the changes in RBC are related to the antiorthostatic posture. The data reveal that anemia is primarily caused by reduced food and water consumption and secondly by restricted movements. I.F.

A86-21451
CHANGES IN IMMUNOREACTIVITY DURING ADAPTATION TO INTERVALS OF HYPOXIC HYPOXIA [NEKOTORYE IZMENENIIA IMMUNOREAKTIVNOSTI ORGANIZMA PRI ADAPTATSKII K PRERYVISTOI GIPOKSICHESKOI GIPOKSII]
B. A. FROLOV, V. A. VORONTSOV, S. N. AFONINA, and N. R. RUSANOVA (Orenburgskii Gosudarstvennyi Meditsinskii Institut, Orenburg, USSR) Fiziologicheskii Zhurnal (Kiev) (ISSN 0201-8489), vol. 31, Nov.-Dec. 1985, p. 646-650. In Russian. refs

Mechanisms influencing the immunoreactivity of rats during adaptation to an hypoxic breathing mixture have been investigated experimentally. It is found that the humoral immune response of rats adapted to hypoxic conditions was intensified in comparison with non adapted animals. Changes in the ability of spleen and thymus tissue to perfuse oxygen were also observed. It is suggested that the above morphofunctional changes in the immunoreactivity of the adapted rats may be related to functional shifts in the mechanisms of neurohumoral regulation. I.H.

A86-21454
CHANGES IN THE HEMOSTATIS SYSTEM OF THE ANIMAL ORGANISM DUE TO GRANULOCYTOPOIESIS INHIBITION UNDER REDUCED BAROMETRIC PRESSURE [IZMENENIIA V SISTEME GEMOSTAZA V USLOVIIAKH UGNETENIIA GRANULOTSITOPOEZA PRI DEISTVII NA ORGANIZM ZHIVOTNYKH PONIZHENNOGO BAROMETRICHESKOGO DAVLENIIA]
N. V. LUNINA and A. F. POLTAVSKII (Voroshilovgradskii Gosudarstvennyi Pedagogicheskii Institut, Voroshilovogad, Ukrainian SSR) Fiziologicheskii Zhurnal (Kiev) (ISSN 0201-8489), vol. 31, Nov.-Dec. 1985, p. 712-716. In Russian. refs

A86-21455
THE DISTINCTIVE FEATURES OF THE ENERGETIC METABOLISM, GLYCOLYSIS, AND TISSUE RESPIRATION OF THE MYOCARDIUM IN RATS HAVING HIGH AND LOW RESISTANCE TO HYPOXIA [OSOBENNOSTI ENERGETICHESKOGO METABOLIZMA, GLIKOLIZA I TKANEVOGO DYKHANIIA MIOKARDA U VYSOKO- I NIZKOUSTOICHIVYKH K GIPOKSII KRYS]
E. A. MARKOVA and I. R. MISULA (Ternopol'skii Gosudarstvennyi Meditsinskii Institut, Ternopol, Ukrainian SSR) Fiziologicheskii Zhurnal (Kiev) (ISSN 0201-8489), vol. 31, Nov.-Dec. 1985, p. 737-739. In Russian. refs

It is shown that the content of macroergs and creatinphosphate in rat myocardial tissue is higher in animals showing a high degree of resistance to hypoxia than it is in animals having low hypoxic tolerance. Some possible genetic factors determining the efficiency of oxygen use in the myocardium in the presence of hypoxia, are discussed. I.H.

A86-21587
ARCHAEBACTERIAL LIPIDS IN HOT-SPRING MICROBIAL MATS
D. M. WARD (Montana State University, Bozeman), S. C. BRASSELL, and G. EGLINTON (Bristol, University, England) Nature (ISSN 0028-0836), vol. 318, Dec. 26, 1985, p. 656-659. Research supported by the Royal Society. refs
(Contract NERC-GR3/2951; NERC-GR3/3758; NSF BSR-83-15289)

The first direct comparison between isopranyl ether-linked lipids in hot-spring microbial mats and the observed populations of archaebacteria is reported. The mats are from Yellowstone National Park and may represent modern analogs of Precambrian communities preserved as stromatolites. As relatively simple microbial systems, they are suitable for validating specific molecular markers as indicators of microbial populations within a natural community. It is found that the phytanyl and biphytanyl ethers reflect the measured distribution of methanogenic archaebacteria. C.D.

A86-21588
AN INTRON IN THE 23S RIBOSOMAL RNA GENE OF THE ARCHAEBACTERIUM DESULFUROCOCCUS MOBILIS
J. KJEMS and R. A. GARRETT (Aarhus Universitet, Denmark) Nature (ISSN 0028-0836), vol. 318, Dec. 26, 1985, p. 675-677. Research supported by the Statens Naturvidenskabelige Forskningsrad. refs

The first evidence for the occurrence of an intron within any prokaryotic ribosomal RNA is presented. The intron was found within the 23S rRNA gene of the sulfur-dependent and anaerobic Thermoproteale Desulfurococcus mobilis, which was isolated from hot acidic springs in Iceland at temperatures up to 97 C. The intron contains 622 base pairs, is very A + T-rich (65 percent) compared with the 23S rRNA gene (34 percent), and exhibits a large open reading frame. The splicing site occurs in domain IV of the 23S RNA at a position close to that of an intron of the lower eukaryote Physarum polycephalum. The intron does not readily fall into one of the three classes of eukaryotic nuclear introns because it has features in common with those of classes I (rRNA) and III (transfer RNA). C.D.

USAF TOXICOLOGY RESEARCH ON PETROLEUM AND SHALE-DERIVED AVIATION GAS TURBINE FUELS
J. A. MARTONE (USAF, Aerospace Medical Research Laboratory, Wright-Pattern AFB, OH) ASME, International Gas Turbine Conference and Exhibit, 30th, Houston, TX, Mar. 18-21, 1985. 4 p. refs
(Contract F33615-80-C-0512)
(ASME PAPER 85-GT-34)

The effect of exposure to the hydrocarbons of aircraft turbine fuels on man is examined. Methods used to establish chemical exposure limits, which include the Threshold Limit Value-Time-Weighted Average (TVL-TWA), TVL-Short-term Exposure Limit (TVL-STEL), and skin notation, are described. The proposed limits for JP-4 are a TLV of 700 mg/cu m, a STEL of 1050 mg/cu m, and n-hexane as a skin notation. Experiments are conducted in which rats are exposed to 2500 and 5000 mg/cu m of JP-4 for 8 months, and 500 and 100 mg/cu m for 90 days. The 8-month data reveal no effect on the rats by the fuel is detected; however, in the 90-day test group reduced weight gain, the formation of hyaline droplets in the proximal tubular epithelium, increased kidney/body weight ratios, and renal carcenoma are observed. The mechanism which causes this hydrocarbon-induced renal effect and its possible influence on man are being investigated. I.F.

DEFENSE STRATEGIES AGAINST HYPOXIA AND HYPOTHERMIA
P. W. HOCHACHKA (British Columbia, University, Vancouver, Canada) Science (ISSN 0036-8075), vol. 231, Jan. 17, 1986, p. 234-241. NSERC-supported research. refs

The mechanisms underlying the tolerance to hypoxia and hypothermia are investigated at the cellular level. It is found that the most serious perturbations of hypoxia and hypothermia arise from an imbalance between (1) the extent of depression of adenosine triphosphate (ATP) synthesis rates and (2) the depression of processes requiring membrane-based ATP. When metabolic and membrane functions are decoupled, the cells (tissues or organisms) necessarily become sensitive to hypoxia, to hypothermia, or to both conditions. The similarities and differences in mechanisms of adaptation to hypoxia and hypothermia are analyzed with emphasis on opportunities for novel intervention strategies. V.L.

EFFECT OF IMMOBILIZATION STRESS ON BODY WEIGHT IN RATS
R. INABA, T. FURUNO, and A. OKADA (Kanazawa University, Japan) Japanese Journal of Aerospace and Environmental Medicine (ISSN 0387-0723), vol. 21, Dec. 1984, p. 51-55. refs

The present study was aimed at studying the effects of emotional stress on the balance between energy intake and loss in rats. Rats were immobilized for one hour (0900-1000 hr) daily in a cylinder type mesh wire cage for one week. Food and water were not provided during this one hour period in both immobilized and control rats. During immobilization, body weight decreased three times as much in the control, but urine and feces volume did not change. In the immobilized rats, water intake significantly increased at night but food intake did not change. Thus, the mechanism other than reduced energy intake or increased excreta, such as increased energy consumption, may be contributing to the reduced body weight in the rat subjected to immobilization stress. However, the reduction of body weight during immobilization stress was not recovered at night with a significant increase in water intake. After repeated exposures to immobilization stress, the reduction of body weight began to be recovered at night. However, only a day pause in the immobilization stress abolished this phenomenon. An investigation of the antihypoxic effect of lithium hydroxybutyrate and indomethacin have been investigated experimentally in dogs having acute recurrent asphyxial hypoxia. Brain function was monitored following injection of separate and combined dosages of lithium hydrobutyrate and indomethacin. It is shown that both drugs possess a marked antihypoxic effect on the links in the hypoxia pathogenesis. A combined dose led to an increase in the number of animals remaining unimpaired following four successive periods of anhypoxia. I.H.

RESISTANE, EXCHANGE AND CAPACITANCE FUNCTIONS OF SKELETAL MUSCLE VESSELS IN THE PRESENCE OF ACUTE HYPOXIC HYPOXIA [REZISTIVNAIA, OBMENNAIA I EMKOSTNAIA FUNKTSII SOSUDOV SKELETNOI MUSKULATURY PRI OSTROI GIPOKSICHESKOI GIPOKSII]
B. I. TKACHENKO and IU. I. IBRAGIMOV (Institut Eksperimental'noi Meditsiny, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Oct. 1985, p. 1229-1237. In Russian. refs

It is shown that acute hypoxia (10 percent O2 in nitrogen) increases precapillary resistance of skeletal muscle vessels in hemodynamically isolated cats. Postcapillary resistance was reduced, by about 30 percent together with capillary hydrostatic pressure and the capillary filtration coefficient (CFC). Similar changes were observed in the denervated vascular bed under cross circulation. I.H.

CHANGES IN THE FUNCTION OF SKELETAL MUSCLE VESSELS DUE TO THE CARDIOGENIC DEPRESSOR REFLEX [IZMENENIIA FUNKTSII SOSUDOV SKELETNOI MUSKULATURY PRI KARDIOGENNOM DEPRESSORNOM REFLEKSE]
M. V. ENIKEEV (Institut Eksperimental'noi Meditsiny, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Oct. 1985, p. 1252-1257. In Russian. refs

Variations in the vascular resistance and capillary filtration coefficient of cat hindlimb blood vessels were studied during the cardiogenic depressor reflex. Measurements of integral stretching ability and vessel capacitance were also obtained. It is found that short term compression of the left coronary artery induced a decrease in the perfusion pressure and capillary filtration coefficient. The integral stretching ability of the venous bed and venous capacitance were also increased in response to compression of the left coronary artery. The morphofunctional mechanism underlying the variations in vascular response are discussed. I.H.

THE EFFECT OF SHORT TERM HYPOXIA ON BODY TEMPERATURE AND LACTIC ACID IN BLOOD [VLIIANIE KRATKOVREMENNOI GIPOKSII NA TEMPERATURU TELA I MOLOCHNUIU KISLOTU V KROVI U MYSHEI]
S. N. PISARENKO, A. S. SEPISHEVA, and A. D. SLONIM (AN KSSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Oct. 1985, p. 1282-1286. In Russian. refs

Changes in body temperature and lactic acid content were studied in mouse blood following a three-step exposure to barochamber hypoxia at an altitude of 8000 meters. Air temperatures in the chamber were 10, 20, and 36 C, respectively. The greatest drop in body temperature was observed at a temperature of 10 C, and the smallest drop occurred at 36 C.

The highest level of lactic acid content was (up to 3.6 mM/1) was recorded two minutes after exposure to the hypoxia, and the lowest level was recorded two minutes following readaptation. Some possible mechanisms for the observed variations are discussed. Emphasis is given to the occurrence of repeated hyperventilation due to conditioning. I.H.

THE ELUSIVE MECHANISM OF THE CIRCADIAN CLOCK
C. H. JOHNSON and J. W. HASTINGS (Harvard University, Cambridge, MA) American Scientist (ISSN 0003-0996), vol. 74, Jan.-Feb. 1986, p. 29-36. Research supported by the National Institute of Health. refs

Experimental strategies which are applied to elucidate the biochemical mechanism of the circadian system are described. A review of the basic properties of the circadian cycle and examples of organisms which possess these properties are presented. Clinical studies conducted to analyze the effect of cyclic changes, induced by jet lag or drugs, on mental and physical health are discussed. The development of models in order to understand the biochemical mechanism which controls the cycle is examined. Eskin's (1979) three approaches to identifying the mechanism are analyzed. Perturbations in the clock, either drug-induced or mutations, are investigated to provide data on the mechanism. Characterization of the entrainment pathway by following the photon to the pacemaker and characterization of the coupling pathway by tracing an overt rhythm to the pacemaker are proposed as means of identifying the mechanism. The analysis of enzymes is an additional approach toward determining the nature of the biochemical mechanism. Examples revealing the applicability of these research strategies are provided. I.F.

HEAT ACCLIMATION - CARDIAC PERFORMANCE OF ISOLATED RAT HEART
M. HOROWITZ, Y. SHIMONI, S. PARNES, M. S. GOTSMAN, and Y. HASIN (Jerusalem, Hebrew University; Haddassah University Hospital, Israel) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Jan. 1986, p. 9-13. refs

The cardiovascular system is a powerful effector of the thermoregulatory system. Following acclimation to heat, cardiac output and stroke volume are elevated. In addition, it has been found that in cardiac ventricles of 1- and 2-mo-acclimated rats there is a transition from fast myosin (V1) to slow myosin (V3) isozyme. The prolonged state of increased cardiac output maintained by increased stroke volume and the increased share of V3 myosin isozyme may result in alterations in the function of the acclimated heart as a pump. The present investigation has the objective to examine this hypothesis by establishing pressure-volume relations during isovolumic contraction and by studying the effects of changes in beating rate on the contractile response of the isolated hearts obtained from rats after 2 mo of acclimation to heat. The results of the investigation show that adaptation of cardiac muscle of sedentary rats to heat is associated with increased efficiency due to increased elasticity. G.R.

REGULATION OF BONE MINERAL LOSS DURING LACTATION
R. BROMMAGE and H. F. DELUCA (Wisconsin, University, Madison) American Journal of Physiology: Endocrinology and Metabolism (ISSN 0193-1849), vol. 248, 1985, p. E182-E187. Research supported by the Wisconsin Alumni Research Foundation. refs
(Contract NIH-AM-14881; NAG2-167)

The effects of varyng dietary calcium and phosphorous levels, vitamin D deficiency, oophorectomy, adrenalectomy, and simultaneous pregnancy on bone mineral loss during lactation in rats are studied. The experimental procedures and evaluations are described. The femur ash weight of lactating and nonlactating rats are calculated. The data reveals that a decrease in dietary calcium of 0.02 percent results in an increased loss of bone mineral, an increase in calcium to 1.4 percent does not lessen bone mineral loss, and bone mineral loss in vitamin D deficient rats is independent of calcium levels. It is observed that changes in dietary phosphorous level, oophorectomy, adrenalectomy, and simultaneous pragnancy do not reduce bone mineral loss during lactation. The analysis of various hormones to determine the mechanism that triggers bone mineral loss during lactation is presented. I.F.

PROTEIN CRYSTAL GROWTH RESULTS FROM SHUTTLE FLIGHT 51-F Final Report
C. E. BUGG 17 Oct. 1985 7 p
(Contract NAS8-36611)
(NASA-CR-178540; NAS 1.26:178540) Avail: NTIS HC A02/MF A01 CSCL 06C

The protein crystal growth (PCG) experiments run on 51-F were analyzed. It was found that: (1) sample stability is increased over that observed during the experiments on flight 51-D; (2) the dialysis experiments produced lysozyme crystals that were significantly larger than those obtained in our identical ground-based studies; (3) temperature fluctuations apparently caused problems during the crystallization experiments on 51-F; (4) it is indicated that teflon tape stabilizes droplets on the syringe tips; (5) samples survived during the reentry and landing in glass tips that were not stoppered with plungers; (6) from the ground-based studies, it was expected that equilibration should be complete within 2 to 4 days for all of these vapor-diffusion experiments, thus it appears that the vapor diffusion rates are somewhat slower under microgravity conditions; (7) drop tethering was highly successful, all four of the tethered drops were stable, even though they contained MPD solutions; (8) the PCG experiments on 51-F were done to assess the hardware and experimental procedures that are developed for future flights, when temperature control will be available. Lysozyme crystals obtained by microdialysis are considerably larger than those obtained on the ground, using the identical apparatus and procedures. E.A.K.

A system of rat restraint was needed to allow maximum accessibility to the animal. This system, designed inhouse, is constructed of 3/8-in plexiglass and stainless steel rods. Several special design features, including the adjustment of size to accomodate a wide weight range of animals, are superior to commerical varieties. This system has been used extensively in two published studies and other uncompleted studies and has adapted well to many applications. GRA

We have developed methodology to measure simultaneously fluid redistribution among the major compartments during moderate and severe hypohydration. Total body water (TBW) was determined using tritiated water, extracellular fluid volume, (ECF) was measured using a single injection C-14 insulin technique, and plasma volume (PV) was determined by cardio-green dye dilution. Moderate (10% decrease in body weight) and severe (15%) hypohydration resulted in significant losses in TBW, ECF and PV. Plasma volume was decreased by approximately 25% in both groups, and other fluid compartments were differentially affected. For example, the moderately dehydrated group maintained PV by shifting fluid from the ECF and ISF (interstitial fluid) compartment while preserving the ICF (intracellular fluid) conversely, the severely dehydrated group maintained PV by redistributing fluid from both the ECF and ICF compartments. The data indicated that the initial response to fluid loss was the movement of fluid from the ECF pool to sustain both PV and ICF. In severely hypohydrated rats, PV was maintained at the expense of ICF. These experiments indicate that PV and ICF are maximally protected, probably to preserve the integrity of the cardiovascular system and to minimize organ injury. GRA

The radioprotective effects of Hg(++) were investigated in Staphylococcus aureus and Pseudomonas aeruginosa bacteria having very different gc ratios in their DNA. A protective effect is seen in both with first order curves or at least in the k/sub L/ region of the breakpoints. However, it is curious that there is a distinct difference in the metal-free N2 baseline of Staphylococcus aureus compared to its EtOH metal-free N2 response while with Pseudomonas aeruginosa both the metal-free N2 baseline and its EtOH metal-free results are similar. In related studies a new radioprotective substance was evaluated in bacterial systems. Results showed that, in the presence of Rh(NH3)3C/3, the anoxic cell shows greater sensitivity than the oxygenated cell. This compound has considerable therapeutic promise providing it acts the same on mammalian cells. DOE

BIOLOGICAL EFFECTS OF MILLIMETER WAVES ON THE MOUSE
C. O. CRIBORN, C. HENRIKSSON, and L. D. WERNLUND Aug. 1985 17 p refs In SWEDISH; ENGLISH summary
(FOA-C-50023-H1; ISSN-0347-7665) Avail: NTIS HC A02/MF A01

To study the effects of millimeter waves on respiration, rectal temperature, and of an acoustic reaction on mice, animals aged 60 to 70 days, weighing 25 to 30 g, were irradiated by 2 different oscillators with a power intensity of 10 mW/sqcm at frequencies of 35 and 94,3 GHz. The absorbed irradiation was converted into heat which the mouse compensated for by decreased respiratory minute volume. The acoustic reaction was acutely affected in positive or negative direction depending on the frequency. The effects return to normal values 5 to 20 min after irradiation. No significant variation of the body temperature is noted.

Models for Biomedical Research provides a historical summary of the concept and use of models and their contributions to biomedical knowledge, evaluations of the utility of nonmammalian models, with particular attention to nonmammalian vertebrates, invertebrates, microorganisms, cell and tissue culture systems, and mathematical models. The report proposes a new perspective on the role of models, whereby they serve as sources of information that can be generalized to the total body of biological knowledge rather than directly, or only, to humans. In the course of the study six workshops were held to explore the use of models in various aspects of biomedical research. Summaries of the workshops are included as appendices to the report.

DYNAMICS OF PEROXIDE OXIDATION OF LIPIDS DURING STRESS Abstract Only
E. M. MIKAYELAN and V. G. MKHITARYAN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-85-025) p 11 10 Dec. 1985 Transl. into ENGLISH from Biologicheskiy Zhurnal Armenii (Yerevan, USSR), v. 38, no. 5, May 1985 p 393-398
Avail: NTIS HC A05/MF A01

The dynamics of peroxide oxidation of lipids (POL) was studied on white rats during acute stress of varying duration and during chronic stress. Alterations in formation and removal of lipo-peroxides, the direction and intensity depending on the stage of stress and on tissue specificity are shown. During acute stress, POL intensified, especially in the heart. It is shown that alpha-tocopherol levels in blood and in erythocyte membranes dropped during acute stress, while they remained stable in the heart, liver and brain. Repeated stress intensified the POL and

activated the glutathioneperoxidase-glutathionereductase system. Under chronic stress, the POL dimished, alpha tocopherol levels in tissues became lower in all phases of the stress, altering the structure and function of biomembranes and necessitating antioxidative prophylactic measures and therapeutic interventions because the cell metabolism was comprised. MITOCHONDRIAL MANIFESTATIONS OF STRESS AND RESPONSE TO HORMONAL STIMULATION AND HYDROAEROIONS Abstract Only
M. N. KONDRASHOVA and Y. V. GRIGORENKO *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-85-025) p 35 10 Dec. 1985 Transl. into ENGLISH from Zhurnal Obshchey Biologii (Moscow, USSR), v. 46, no. 4, Jul. - Aug. 1985 p 516-526
Avail: NTIS HC A05/MF A01

Hepatic and cerebral mitochondrical suspensions obtained from Wistar and August rats were studied to assess the effects of immobilization stress. The mitochondrial preparations exhibited manifestations of stardard biphasic response of physiological stress, which consisted of an initial enhancement of energy metabolism which was reflected in increased succinate oxidation and elevated respiratory rate. These changes were consonant with an initial upsurge in epinephrine release into the blood stream. With ongoing stress, succinate oxidation shows a corresponding increase accompanied, however, by greater increase in an antithetical process-inhibition of succinate dehydrogenase by oxalacetate and the products of serotonin oxidation. Treatment of the stressed animals with sightly charged negative hydroaeroions abrogated the latter effects, and resulted in an increase in mitochondrial respiration to above-background levels. The rapid change seen with the hydroaerions is ascribed to electrobiochemical mechanisms which is responsible for enzyme activation. E.A.K.

The introduction of the mixed leukocyte culture test (MLC) combined with the establishment of a one-way method of stimulation in MLC allowed the correlation of proliferative response in MLC with results of serological studies and the suggestion that reactivity in MLC is controlled by the major histocompatibility complex in man, now known as HLA. That the chromosomal region of HLA which controls the strongest stimulatory determinants for MLC (now known as the HLA-D region) was different from the class I encoding genes was already suggested in two early studies. Definitive evidence in this regard came from the studies of Yunis and Amos (1971). It is our purpose in this paper to discuss our current knowledge of the HLA-D region from the T cell perspective, an area that has been recently reviewed. The use of techniques that allow definition of determinants recognized by T lymphocytes and associated with HLA class II molecules has, thus, allowed definition of further polymorphisms not recognized with currently available/characterized serological reagents. Given the intimate relationship thought to exist between T lymphocyte recognition and major histocompatibility complex encoded molecules, definition of this LD (T lymphocyte defined), polymorphism may be of the greatest import. CLONAL ANALYSIS OF HLA-DR AND -DQ ASSOCIATED DETERMINANTS: THEIR CONTRIBUTION TO DW SPECIFICITIES
N. L. REINSMOEN and F. H. BACH 1985 39 p
(Contract N00014-85-K-0004)
(AD-A160059) Avail: NTIS HC A03/MF A01 CSCL 06P

In order to investigate the distribution of epitopes recognized by T cell clones directed against HLA class II products, bulk primed cell populations were generated using cells matched for class I determinants but disparate for class II determinants. Cells were cloned by single cell deposition (FACS IV) or limiting dilution (1 cell/3 wells), and assayed for proliferative and cytolytic function with panels of well-characterized cells. Our data indicate that determinants detected on both DR and DQ products are associated with the Dw type of the sensitizing cell showing that there is polymorphism recognized by T cells on both DR and DQ that is subtypic to the serologically defined specificities. Thus, it appears that the bulk T cell response is a composite of individual clones recognizing distinct determinants on these class II molecules. The implications of these findings for studies of HLA restricted recognition are discussed. GRA

A method is disclosed improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system for hydrogen generation. The method comprises forming an aqueous solution comprising an electron donor, methylviologen, and certain metalloporphyrins and metallochlorins, and irradiating said aqueous solution with light in the presence of a catalyst. In the photosynthesis process, solar energy is collected and stored in the form of a hydrogen. Ligands attached above and below the metalloporphyrin and metallochlorin plane are capable of sterically blocking photochemically inactive electrostatically bound (PI)-(PI) complexes which can develop. PROTEIN MAPPING AND THE PROBLEM OF COMPLEXITY IN MOLECULAR BIOLOGY
L. ANDERSON and N. ANDERSON 1985 7 p Presented at the Electrophorese Forum, Munich, West Germany, 21 Oct. 1985
(Contract W-31-109-ENG-38)
(DE85-018349; CONF-8510157-1) Avail: NTIS HC A02/MF A01

Two-dimensional electrophoretic protein mapping is now ten years old. Although it was evident to many in 1975 that a system for separating thousands of proteins would have a great effect on biology, the true parameters of this revolution are only now becoming apparent. This paper discusses what has been affected by the development of protein mapping, what the possibilities are now, why it has taken a decade to get this far. DOE

REPORT OF THE SYMPOSIUM ON BIOLOGICAL MONITORING OF EXPOSURE TO METALS AND OTHER INORGANIC COMPOUNDS [VERSLAG VAN HET SYMPOSIUM: BIOLOGICAL MONITORING OF EXPOSURE TO METALS AND OTHER INORGANIC COMPOUNDS]
P. C. BRAGT 1985 12 p In DUTCH Symposium held in Miami, Fla., 30 Apr. - 2 May 1985
(MBL-1985-6; TDCK-93252) Avail: NTIS HC A02/MF A01

Metal concentration measurements in blood and urine, methods used, and social aspects within industrial sanitation, are discussed. Concentration measurements were done on Al, As, Cd, Cr, Hg, Ni, and Pb. Analysis methods such as inductively coupled plasma atomic emission spectrophotometry (ICP-AEA), and ICP electrothermal vaporization combination, ICP with cross flow nebulizer, inductively coupled argon plasma optical emission spectroscopy and Zeeman effect graphite furnace, were considered. Concerning an eventual legal status of biological monitoring, aspects of quality control were emphasized.

NON-INVASIVE PHYSIOLOGIC BRAIN MONITORING IN USAF OPERATIONAL ENVIRONMENTS
M. S. HASWELL (USAF, School of Aerospace Medicine, Brooks AFB, TX) and F. JOBSIS (Duke University, Medical Center, Durham, NC) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 200-203.

Noninvasive optical monitoring of cerebral energy metabolism represents a decade of development at Duke University and is designed to measure brain hemoglobin oxygen saturation, blood volume, and a key indicator of tissue oxygenation, the cytochrome oxidase oxidation level. This instrumentation has been successfully used to monitor patients during surgery. Consequently, an attempt has been made to ascertain the potential for this capability in monitoring humans exposed to the environments of increased +G(z) and hypoxia. The standard USAF aircrew helmet was modified to accept the fiber-optic monitoring probes. Two subjects, while wearing the modified helmet, were exposed to various conditions known to perturb the measurable brain variables at 1 G: hyperventilation, Valsalva maneuver, or breathing 100 percent O2. The results indicated a reduction in brain blood flow and tissue oxygen availability with hyperventilation, and an increase in blood volume with the Valsalva maneuver. These results, along with potential applications of noninvasive optical brain monitoring in the laboratory as a research tool, and in USAF operations as an indicator of pilot performance capability, will be discussed.

SIMULATOR SICKNESS - INCIDENCE OF SIMULATOR AFTEREFFECTS IN NAVY FLIGHT TRAINERS
R. S. KENNEDY, B. DUTTON (Essex Corp., Orlando, FL), M. G. LILIENTHAL, G. L. RICARD (U.S. Navy, Naval Training Equipment Center, Orlando, FL), and L. H. FRANK (Virginia Polytechnic Institute and State University, Blacksburg) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 299-302. refs

Simulator sickness in flight trainers is studied. Symptoms of simulator sickness include: disorientation, dizziness, nausea, vomiting, drowsiness, and visual problems. The negative implications of simulator sickness, such as learning improper adaptive responses to light situations or injury, are discussed. A program designed to survey the incidence of simulator sickness is implemented. A fine-grained analysis of motion sickness obtained during helicopter simulation, two case histories involving reactions to simulation, and a survey of simulator sickness at ten Navy simulators are described. Means of alleviating simulator symptoms until the problem can be eliminated are examined. I.F.

A86-19347
DECOMPRESSION SICKNESS AND INTRAVENOUS BUBBLE FORMATION USING A 7.8 PSI SIMULATED PRESSURE-SUIT ENVIRONMENT
G. A. DIXON (USAF, School of Aerospace Medicine, Brooks AFB, TX), J. D. ADAMS, and W. T. HARVEY IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 303-307.

An experiment conducted to locate the pressure where decompression sickness (DCS) will not occur is described. Thirty males ranging in age from 20-41 are subjected to a 7.8 psi environment for a 6-hour period for three days and participate in

exercise workloads. The monitoring of the subjects for intravenous gas bubbles using ultrasonic Doppler bubble detection techniques is examined. Bubble pattern data for the 30 subjects are tabularly presented. The data reveal only 26.7 percent of the subjects are bubble free for all three days and 73.7 percent experience bubble formation at least one day. The experimental conditions result in a 3.3 percent incidence of DCS; therefore, a minimum suit pressure of greater than 7.8 psi is necessary to eliminate DCS. I.F.

HAND GRIP STRENGTH DECREASE RELATED TO HAND SKIN TEMPERATURE DROP DURING SIX-HOUR ICE COLD WATER IMMERSION
R. ILMARINEN (Institute of Occupational Health, Helsinki, Finland) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 330-333. refs

The relation between hand skin temperature and hand grip strength, and the thermal protective qualities of survival suits during exposure to ice cold water immersion are studied. Five female and five male subjects are exposed to six hours of ice cold water in this experiment. The calculation of hand skin temperature with a thermistor, and hand grip strength with a dynamometer are described. A 12 C decrease in hand skin temperature and a 30 percent decrease in hand grip strength in the first two hours of exposure, and a linear relation between hand grip strength and hand skin temperature are observed. The observations reveal that physical cooling and cold-induced vasoconstriction cause a drop in hand skin temperature and hand grip strength. The gloves and sleeves of the survival suits did not provide the adequate thermal insulation required to maintain hand skin temperature and hand grip strength. I.F.

A86-19351
EVALUATION OF PILOT PERFORMANCE AND AIRCREW PROTECTIVE DEVICES IN A SIMULATED F-14 FLAT SPIN ENVIRONMENT
J. EYTH, JR. and D. P. GLEISNER (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 350-355. refs

A pilot's response to a simulated F-14 flat spin is studied. The F-14 aerodynamic model and the human centrifuge motion platform of the Dynamic Flight Simulator are examined. A spin recovery test is performed to evaluate a pilot's ability to recover the aircraft from the spin and determine what factors influence an unsuccessful recovery. The spin warning display system and restraint system evaluated in the spin test are described. Graphs are provided on the number of revolutions, altitude loss, and recovery time as a function of spin entry condition. The results reveal that higher yaw rates cause an increase in the number of revolution, greater altitude loss prior to recovery of the aircraft, and the pilots are not incapacitated by the high -Gx forces. The spin warning display and restraint systems are highly rated by the pilots. I.F.

EFFECTS OF RAISED BODY TEMPERATURE ON REASONING, MEMORY, AND MOOD
R. L. HOLLAND, J. A. SAYERS, W. R. KEATINGE, H. M. DAVIS, and R. PESWANI (London Hospital, England) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Dec. 1985, p. 1823-1827. SERC-supported research. refs

Ten males and ten females are immersed in water of 37 and 41 C for approximately 15 minutes until core temperature rises to 39 + or - 0.2 C and then they are tested. The methods used to measure core and skin temperature, and access long and short term memory, reasoning, and mood are described. The relations between raised core temperature, and memory registration or recall, the speed of performing reasoning problems, and mood are analyzed. The data reveal that long and short term memory, and the accuracy of performing verbal logic problems or two-digit subtractions are not affected by increased core temperature; however, a significant increase in the speed of performing the tests is observed. An increase in irritability and a decrease in alertness are detected in the subjects. Reasons for improved speed of performance at higher core temperatures are discussed. I.F.

A86-20003
EFFECTS OF BREATHING PATTERN ON INSPIRATORY MUSCLE ENDURANCE IN HUMANS
T. L. CLANTON, G. F. DIXON, J. DRAKE, and J. E. GADEK (Ohio State University, Columbus) Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Dec. 1985, p. 1834-1841. Research supported by the Bremer Foundation and Ohio State University. refs

Changes in duration of inspiration and inspiratory flow rate (VTI), and their effects on endurance are studied. The procedures for testing inspiratory muscle endurance of three males and three females using a threshold resistance which produces a constant mouth-pressure load are described. Endurance is measured as length of time a target VTI could be a maintained with maximum effort. The influence of changes in breathing frequency on endurance is examined. The effects of VTI on endurance are analyzed. A comparison of the influence of of VTI on muscle endurance with duty cycle is presented. The data reveal that increases in VTI and duty cycle shorten muscle endurance and decreases lengthen it, duty cycle has a greater effect on inspiratory muscle endurance than VTI, and changes in breathing frequency do not effect muscle endurance. I.F.

A86-20004
PLASMA HORMONAL RESPONSES AT GRADED HYPOHYDRATION LEVELS DURING EXERCISE-HEAT STRESS
R. P. FRANCESCONI, M. N. SAWKA, K. B. PANDOLF, R. W. HUBBARD, A. J. YOUNG (U.S. Army, Research Institute of Environmental Medicine, Natick, MA) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 59, Dec. 1985, p. 1855-1860. refs

The effects of graded levels of hypohydration (3, 5, and 7 percent of body weight) on the response of plasma cortisol (PC), plasma renin activity (PRA), and plasma aldosterone (ALD) to exercise in heat are examined. The experimental conditions, monitoring, and testing of the six heat-acclimated male subjects are described. Graphs revealing the relationship between graded levels of hypohydration, exercise in the heat, and PC, PRA, and ALD levels are presented. IT is observed that hypohydration increases the levels of PC and PRA and exercise in heat increases the ALD level; PRA and ALD correlate with graded intensities of hypohydration through 5 percent hypohydration and PC is increased through 7 percent. It is concluded that both graded level of hypohydration and exercise in the heat increase hormonal levels following heat acclimation. I.F.

THE EFFECTS OF +GZ ON THE CORONARY CIRCULATION - A REVIEW
M. H. LAUGHLIN (Oral Roberts University, Tulsa, OK; USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 5-16. refs
(Contract NIH-HL-26963; NIH-HL-29428)

The interaction of basic coronary physiology and acceleration physiology is analyzed. A review of basic coronary functions is presented; blood is determined by the interaction of resistance to blood flow and the perfusion gradient. The modulation of coronary vascular resistance to blood flow by local metabolic control mechanisms, neural control, and mechanical effects is described. The factors which influence myocardial oxygen consumption and coronary functions during +Gz stress are discussed. During +Gz stress coronary vascular resistance causes a decrease in blood flow reserve nd an increase in coronary blood flow, thereby maintaining an adequte coronary blood flow. Potential pathologic effects on the heart, cardiovascular system, and coronary blood flow due to +Gz exposure are studied. The effects of +Gz stress

on the coronary blood flow of pilots with cardiovascuar disease is investigated. I.F.

BEDREST-INDUCED PEAK VO2 REDUCTION ASSOCIATED WITH AGE, GENDER, AND AEROBIC CAPACITY
V. A. CONVERTINO, D. J. GOLDWATER, and H. SANDLER (NASA, Ames Research Center, Moffett Field, CA; Arizona, University, Tucson) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 17-22. refs

A study measuring the peak oxygen uptake (V02), heart rate (HR), and exercise tolerance time of 15 men of 55 + or - 2 yr and 17 women of 55 + or - 1 yr after 10 days of continuous bed rest (BR) is presented. The experimental conditions and procedures are described. Following BR a decrease in peak VO2 of 8.4 percent in men and 6.8 percent in women, a reduction in exercise tolerance time by 8.1 percent in men and 7.3 percent in women, and an increse in HR of 4.4 percent and 1.3 percent for men and women, respectively, are observed. These data are compared with data from Convertino et al. (1977) for men 21 + or - 1 yr and women 28 + or - 2yr. It is concluded that BR-induced aerobic deconditioning is independent of age and sex, since the relative decrease in peak V02 in the older and younger subjects and men and women are similar. IF.

A86-20403
COMPARATIVE COLD RESPONSES OF MEN AND WOMEN TO EXTERNAL AND INTERNAL COLD STIMULI
J. A. MANNINO and W. C. KAUFMAN (Wisconsin, University, Green Bay) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 27-30. refs

Experiments which compared the contributions of internal and external cold stimuli on the initiation of horripilation in men and women are studied. The experimental conditions involve five men and five women exposing their legs to 16 C for 20 minutes while wearing perfused vests to maintain torso skin temperture at 34, 30, 26, and 22 C, and following immersion exercising on a bicycle ergometer for 20 min. The relationship between body fat, torso skin temperature, and horripilation episodes for men and women are analyzed. The esopageal and rectal temperatures of men and women for the various torso skin temperatures are recorded. With a decreasing skin temperature a decrease in rectal and esophageal temperature is observed in men; however, in women no change is detected. It is concluded that in men the number of horripilation episodes is inversely related to torso skin temperature and in women horripilation episodes correlate with body. I.F.

CALCIUM ANTAGONISTS IN THE PREVENTION OF MOTION SICKNESS
J. A. LEE, L. A. WATSON, and G. BOOTHBY (Royal Australian Air Force, Institute of Aviation Medicine, Point Cook, Australia) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 45-48. refs

Flunarizine is a calcium antagonist which has proved clinically useful in controlling chronic vertigo. In a double blind crossover trial 10 subjects were used to compare the electronystagmic responses to motion in patients taking flunarizine, prochlorperazine maleate, or placebo. Flunarizine is shown to be a powerful peripherally acting labyrinthine suppressant, with application in the prevention of motion sickness. Flunarizine produces none of the central depressive side effects characteristic of antihistamines and anticholinergics, which are the conventional anti-motion sickness drugs. Author

THE USE OF THORACIC IMPEDANCE FOR DETERMINING THORACIC BLOOD VOLUME CHANGES IN MAN
T. J. EBERT, J. J. SMITH, J. A. BARNEY, D. C. MERRILL, and G. K. SMITH (Wisconsin, Medical College, Milwaukee; USVA, Medical Center, Milwaukee, WI) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 49-53. USVA-supported research. refs
(Contract NIH-HI-27815)

In these studies, strong inferential evidence is provided which suggests that thoracic impedance provides reliable estimates of thoracic blood volume changes in man. There were 24 volunteers studied in four different experiments. The results of these studies are as follows: (1) impedance derived blood volume changes in the calf of man correlate closely with standard estimates of calf blood volume changes made with strain gage plethysmography. (2) There is a close linear relationship between the increase of thoracic impendance and the increase of calf blood volume during head-up tilt, (3) Voluteers who develop syncope during head-up tilt (presumably due to excessive decreases of central blood volume) demonstrate exaggerated increases of thoracic impedance. (4) Decreases in central venous pressure produced by lower body negative pressure are significantly correlated to thoracic impendance increases. Author

AGE, DEGRADED VIEWING ENVIRONMENTS, AND THE SPEED OF ACCOMMODATION
C. L. ELWORTH, C. LARRY, and F. V. MALMSTROM (Boeing Aerospace Co., Seattle, WA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 54-58. refs

Subjects were 35 males in an accommodation experiment which utilized a subjective laser optometer. Seven different age groups, from average age 22-52, were measured on the time to change accommodation from a near to an infinity target. During the experiment, room illumination, time duration of reading at a near distance, and the distance of a near-reading task were varied. Results indicated that the time to accommodate from a near to infinity target varied as a function of age, room illumination, and the distance of the near-reading task. During ideal conditions, older subjects could accommodate nearly as quickly as the younger subjects; however, during degraded viewing conditions, the accommodation time for older subjects increased as much as tenfold. Time to accommodate time to a distance target also increased as much as tenfold. Time to accommodate to a distant target solely as a function of time spent reading at a near distance, regardless of age. In accordance with previous review of aging and military pilots, it is suggested that the time to accommodate may be used as an objective measure of degraded vision as it relates to age. Author

AN OVERVIEW OF SPACE PHYSIOLOGY AND RELATED EXPERIMENTS ON SPACELAB 1
L. D. CAREN (Santa Clara University, CA) Journal of the Astronautical Sciences (ISSN 0021-9142), vol. 33, Oct.-Dec. 1985, p. 331-340. refs

This paper reviews the current status of research on the physiological effects of space flight. Results from early space flights and the more recent Spacelab 1 Shuttle mission are described. Space adaptation syndrome, previously known as space motion sickness, affects at least half of those who fly in space, and countermeasures have not been totally effective. Other physiological effects of space flight include loss of muscle mass

and bone mass, changes in the blood, alterations in the function of the heart and blood vessels, and some decrease in the vital capacity of the lungs. Many hormonal changes occur which are not fully understood. Although problems are described, the mechanisms underlying physiological changes are not known. We have only begun to learn whether life can successfully adapt to long periods of time in space. Author

THE DIAPHORETIC REFLEX IN A COMPLEX OF METHODS FOR ESTIMATING OPERATOR EFFICIENCY [POTOOTDELITEL'NYI REFLEKS V KOMPLEKSE METODOV OTSENKI RABOTOSPOSOBNOSTI OPERATORA]
P. P. SLYNKO, L. I. BUKVAREVA, S. V. ZAPOROZHETS, and P. M. ONISHCHENKO (Kievskii Gosudarstvennyi Universitet, Kiev, Ukrainian SSR) Fiziologicheskii Zhurnal (Kiev) (ISSN 0201-8489), vol. 31, Nov.-Dec. 1985, p. 678-682. In Russian. refs

A method for measuring the electrodermal characteristics associated with the stress induced diaphoretic reflex has been developed. The method is intended for use in evaluating the functional conditions of a human operator in monotonous work conditions. A general description of the diaphoretic skin sensor is given, and experimental results are presented concerning the accuracy of the method in comparison to conventional electrodermal sensing methods. It is shown that, in contrast to conventional methods, the present sensing method offers a highly reliable measure of skin response over extended periods of monotonous work. I.H.

The biochemical and physiological reactions of the sympathoadrenal system (SAS) were studied in 137 crewmen during oceanic voyages. Changes in biochemical SAS criteria (e.g., dihydroxyphenylalanine, catecholamines, etc.) and physiological SAS criteria (heart beat, attention and memory indices and mental activity) in conditions of everyday routine and during periodic stress were evaluated. Two extreme ('first' and 'second') and two intermediate SAS functional types were identified and defined according to the measured criteria. While individuals of the first type performed better in stressful and extreme working situations, the individuals of the second type did better during the monotonous routine conditions. Testing criteria are suggested for selecting future crewmembers for different navigation activities. I.S.

DISTURBANCE OF THE MULTIPERIODIC SYNCHRONIZATION OF THE HEART-BEAT AND RESPIRATORY RHYTHMS AFTER TRANSMERIDIAN FLIGHTS THROUGH THREE TIME ZONES [NARUSHENIE KRATNOPERIODICHESKOI SINKHRONIZATSII RITMOV SERDTSEBIENIIA I DYKHANIIA POSLE TRANSMERIDIANNOGO PERELETA CHEREZ TRICHASOVYKH POIASA]
A. A. PUTILOV (Institut Fiziologii, Novosibirsk, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 915-922. In Russian. refs

The values of individual multiple (most often 4/1) heart-beat frequency (HBF) to respiratory frequency (RF) ratios observed during normal nocturnal sleep are known to be disturbed after periods of night-time shifts or periods of alternating short sleep/short night-time work. The daytime HBF/RF ratios most usually approach the 3/1 value. The night and daytime ratios can vary from 5/1-2/1 (integral) to 5/2-3/2 (fractional) values. This paper reports postflight desynchronization of the HBF/RF biorhythms observed in individuals who have flown through one or three time-zones. In the case of the one-hr zone, the rhythm deviations were small and disappeared after the first two post-flight days; a small increase in variation in the circadian rhythm was observed. After the 3-hr-zone passage, internal desynchronization was observed during the first ten postflight days, with continued shift in deviations from integral to fractional HBR/RF ratios during the total 10-day-long adaptation period, reaching a maximum after the first 2-3 postflight days. I.S.

THE RISK OF ARTERIAL HYPERTENSION AND THE FEATURES OF FUNCTIONAL BRAIN ASYMMETRY IN WORKERS EMPLOYED IN REGULARLY REPEATED EXPEDITION-TYPE WORK [RISK ARTERIAL'NOI GIPERTENZII I OSOBENNOSTI FUNKTSIONAL'NOI ASIMMETRII MOZGA U RABOCHIKH VAKHTY DAL'NEGO PLECHA]
V. P. LEUTIN and E. I. NIKOLAEVA (Institut Fiziologiia, Novosibirsk, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 923-926. In Russian. refs

Arterial blood pressure and parameters of functional sensorimotor asymmetry were measured in 306 workers employed in oil-field work that involved regularly repeated long-distance flight

travel, with passages through several time zones, to and from the work location. Day-time-shift drivers who lived permanently at the residential base were used as controls. The traveling workers displayed increased percentages (relative to the control group) of lefthanded and ambidextrous individuals. Moreover, in the traveling worker group, arterial hypertension occurred primarily in righthanded individuals and in those with mixed parameters of functional asymmetry (no such connection was registered in the control group). On the other hand, arterial hypertension in the traveling lefthanded and ambidextrous individuals remained at the levels of the respective control groups. I.S.

HEAT ADAPTATION DURING TRAINING BY GRADED HYPERTHERMIA [O TEPLOVOI ADAPTATSII PRI TRENIROVKAKH POSREDSTVOM DOZIROVANNOI GIPERTERMII]
IU. A. IVANOV and L. A. KOROLEV (Gosudarstvennyi Institut Fizicheskoi Kul'tury, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 952-956. In Russian. refs

Development of adaptation to a hot climate was studied in 60 nonacclimatized subjects trained by periodic exposures to hyperthermia. The subjects' functional status was evaluated according to the levels of work capacity and thermal stress, electrocardiogram analysis, sweat losses, and the analysis of psychoemotional parameters. During the first 4-5 days of training, a deterioration of all measured functions was observed. However, after 9-10 days, the physical work capacity, cardiac function, and psychoemotional parameters returned to normal. After 13-15 days of training, the work capacity increased above control by 30.5 percent. I.S.

THE DYNAMICS OF THE HUMAN ESTIMATION OF IMAGE SIZE AND ITS NEUROPHYSIOLOGICAL CORRELATES [DINAMIKA OTSENKI CHELOVEKOM RAZMERA IZOBRAZHENIIA I EE NEIROFIZIOLOGICHESKIE KOORDINATY]
N. B. KOSTELIANETS and V. M. KAMENKOVICH (AN SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 984-988. In Russian. refs

Temporal changes in the estimation of the size of a contour image (a ring) and a textured image (a rectangular grating) were studied, increasing the interstimulus interval (II) between a stimulus and a masking field (represented by either randomly placed multisized rings or randomly chaotically oriented line segments) from 5 to 150 msec. When a ring-type masking mesh was used, all subjects exhibited an initial tendency to overestimate the size of a ring or a rectangle. When a line-segment mesh was used to mask the images, the same subjects could be divided into two groups: those who overestimated both ring and textured images at the minimal IIs, and those who tended to underestimate the same images; when the II was lengthened, the estimation tendencies were reversed respectively. These results are discussed in connection with the results of earlier analyses of neuronal impulses in the visual cells of the cat. I.S.

CYTOCHEMICAL STUDIES OF BLOOD LYMPHOCYTES IN THE DIAGNOSIS AND FORECASTING OF CHANGES IN THE FUNCTIONAL STATUS OF ATHLETES [TSITOKHIMICHESKOE ISSLEDOVANIE LIMFOTSITOV KROVI V DIAGNOSTIKE I PROGNOZIROVANII IZMENENII FUNKTSIONAL'NOGO SOSTOIANIIA SPORTSMENOV]
A. S. IANOVSKAIA (Kievskii Gorodskoi Vrachebno-Fizkul'turnyi Dispanser, Kiev, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 1001-1006. In Russian. refs

Assays of enzymatic activities of succinate (SDH), lactate (LDH), and malate (MDH) dehydrogenases; mitochondrial and cytoplasmic alpha-glycerophosphate dehydrogenases (m-GPDH and c-GPDH); and other blood factors were performed on 260 runners (aerobic work) and 36 cyclists (anaerobic work). Aerobic work caused two types of reactions: (1) increases in SDH, m-GPDH, and c-GPDH and a decrease in LDH in long-distance runners; and (2) increases in m-GPDH, and c-GPDH with no changes in SDH and LDH in sprinters. Anaerobic work led to moderate increases in SDH, LDH, and MDH and large increases in m-GPDH and c-GPDH. Long-term observation of individual athletes disclosed signs of stress syndrome: increases in rest levels of LDH, m-GPDH, and c-GPDH and decreased SDH; and decreases in post-exercise levels of LDH, SDH, m-GPDH, and c-GPDH. These exercise-caused changes and the adaptation reactions in athletes correspond to the reactions that were observed (Ianovskaia, 1981) in workers exposed to unfavorable environments. I.S.

THERMOREGULATION IN MAN UNDER THERMAL STRESS [KHARAKTERISTIKA TERMOREGULIATSII CHELOVEKA PRI TEPLOVOI NAGRUZKE]
A. L. RESHETIUK (Institut Gerontologii, Kiev, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 1012-1019. In Russian. refs

Regulation of thermostability during exposure to heat stress (work in a thermoregulated chamber at 35.5 C and 90-100 percent humidity) was studied in healthy workers of deep coal mines and in college students. The heart beat rate (HBR), arterial blood pressure, axillary and skin temperatures, and other parameters of thermostability were measured at the end of 10-min-long work and rest periods (six each) in the chamber. Five physiological types were recognized on the basis of HBR measurements: I, the lowest stable; II, the low stable; III, the low increasing; IV, the high stable; and V, the high increasing, which also differed in their other stress and thermostability parameters. Type I consisted exclusively of miners, while type V consisted of nonadapted

students. Formulas were developed for calculating thermostability and endurance levels on the basis of indicators of stress exposure, HBR, and body temperature. I.S.

CORRELATION BETWEEN THE ARTERIAL BLOOD PRESSURE, THE PULMONARY ARTERY PRESSURE, AND CENTRAL VENOUS PRESSURE [VZAIMOSVIAZ' ARTERIAL'NOGO DAVLENIIA, DAVLENIIA V LEGOCHNOI ARTERII I TSENTRAL'NOGO VENOZNOGO DAVLENIIA]
V. E. KATKOV, V. V. RUMIANTSEV, and V. V. CHESTUKHIN Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 1026-1028. In Russian.

Arterial pressure (AP), pulmonary artery pressure (PPA), central venous pressure (CVP), minute volume, and cardiac index (CI) were measured in healthy men (at rest) with implanted pulmonary and brachial artery catheters. In addition, CVP and PPA were measured continuously in men exposed to negative pressure on the lower half of the body (NPLB). No correlation was found between CVP on one hand and CI, systolic (s) AP, diastolic (d) AP and medial (m) AP on the other. A direct linear relationship was found between d-AP and CI, and m-AP and CI. The PPA and CVP correlated linearly in both resting subjects and in subjects exposed to NPLB. I.S.

CHANGES IN THE BLOOD ELECTRIC CONDUCTIVITY CAUSED BY BODY IMMERSION [IZMENENIE ELEKTROPROVODNOSTI KROVI PRI PREBYVANII ORGANIZMA V USLOVIIAKH IMMERSII]
V. G. KOZLOVA and E. A. ALEKSANDROVA Fiziologiia Cheloveka (ISSN 0131-1646), vol. 11, Nov.-Dec. 1985, p. 1028-1030. In Russian. refs

Reliability of electric conductivity measurements for the estimation of body hydration levels was evaluated in 12 healthy men submerged (in horizontal position) by the method of 'dry' immersion (Shulzhenko, 1975) for periods of 7 days. Specific electric resistance (SER) of blood was measured by the method of Khasin et al. (1981), concentrations of Na(+) and K(+) in blood in urine were measured photometrically, and the daily intakes and losses of Na and liquid were monitored to estimate net losses or gains. Net losses of Na and liquid increased dramatically after the first 1.5 hr of immersion, and net liquid loss continued during all 7 days of immersion, although on lower than initial levels (Na losses stopped after 3 days). The SER increased by 18-20 percent in the first 24 hr and continued to increase, although at a lower rate, during the 7-day immersion period. While SER and dehydration levels correlated linearly, no correlation was found between SER and other measured factors, such as Na concentration and erythrocyte count. I.S.

The electrophoretic mobility of human buccal epithem cell nuclei was studied before and after training in a hypoxic pressure chamber under angular and precessional accelerations. It is found that, in the absence of training, hypoxia can lead to the inhibition of electrophoretic mobility in the cell nuclei; however, three days of training effectively mitigated the inhibitory effect of acute hypoxia. A reverse correlation is established between the initial resistance to hypoxia among the human subjects and the degree of inhibition of the electrokinetic properties of the cell nuclei. The effects of Coriolis loadings and precessional accelerations were characterized by a significant decrease in the percentage of mobile cell nuclei in the buccal epithelium. I.H.

MECHANISM FOR NEGATIVE WATER BALANCE DURING WEIGHTLESSNESS AN HYPOTHESIS
J. E. GREENLEAF (NASA, Ames Research Center, Moffett Field, CA) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Jan. 1986, p. 60-62. refs

The mechanism for the apparent decrease in body fluid volume in astronauts during spaceflight remains obscure. The widespread postulate that the hypohydration is the result of the Henry-Gauer reflex, a diuresis caused by inhibition of vasopressin secretion resulting from increased left and perhaps right atrial (central) venous pressure, has not been established with direct measurements on astronauts. An hypothesis is proposed to account for fluid-electrolyte shifts during weightlessness. A moderate but transient increase in central venous pressure occurs when orbit is entered that is insufficient to activate the Henry-Gauer reflex but sufficient to stimulate the release of atrial natriuretic peptides. Increased sodium excretion would facilitate some increased urinary water loss. The resulting relatively dilute plasma and interstitial fluids would cause fluid to shift into the cellular space, resulting in edema in the head and trunk and inhibition of thirst and drinking. Thus, the negative water balance in astronauts would be caused by a gradual natriuresis and diuresis coupled with reduced fluid intake. Author

EFFECTS OF DETRAINING ON CARDIOVASCULAR RESPONSES TO EXERCISE - ROLE OF BLOOD VOLUME
E. F. COYLE, M. K. HEMMERT, and A. R. COGGAN (Texas, University, Austin) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Jan. 1986, p. 95-99. Research supported by the American Heart Association. refs

An increase in stroke volume (SV) during exercise represents a major adaptation to endurance training. It has been found that when highly trained people stop training, they display a large decline in SV during upright exercise after only 12 days of inactivity, while little further decline in SV occurs after three months of inactivity. The present study had the objective to determine the extent to which a reduction in blood volume contributes to the rapid decline in SV during detraining. The cardiovascular responses to submaximal and maximal exercise were measured in eight men when trained and then again after 2-4 weeks of inactivity. The period of inactivity resulted in a decline in blood volume. Thus, the findings indicate that the decline in SV during submaximal upright exercise following a few weeks of detraining is largely due to a decline in blood volume. G.R.

CARDIORENAL-ENDOCRINE RESPONSES TO HEAD-OUT IMMERSION AT NIGHT
K. SHIRAKI, N. KONDA, S. SAGAWA, J. R. CLAYBAUGH, and S. K. HONG (University of Occupational and Environmental Health, Kitakyushu, Japan; U.S. Army, Tripler Army Medical Center, Honolulu, HI; New York, State University, Buffalo) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Jan. 1986, p. 176-183. refs
(Contract NIH-HL-28542)

Head-out immersion (HOI) induces a cephalad shift of circulating blood, which is followed by diuresis, natriuresis, and kaliuresis. Krishna and Danovitch (1983) concluded that in addition to the well-described diurnal variations in electrolyte excretion, there are circadian variations in the responsivity of volume-regulatory mechanisms. The present investigation was conducted in hydropenic subjects with the objective to reevaluate the circadian change in renal responses to HOI, and to directly assess the extent of HOI-induced central blood pooling by determining the cardiac output during day and night. Another aim of the investigation was to gain additional insight into the circadian changes in endocrine responses to HOI by determining both the plasma level and urinary excretion of antidiuretic hormone (ADH) and aldosterone. Six healthy male medical students were employed as subjects. G.R.

LASER ABLATION OF HUMAN ATHEROSCLEROTIC PLAQUE WITHOUT ADJACENT TISSUE INJURY
W. S. GRUNDFEST, F. LITVACK, J. S. FORRESTER, T. GOLDENBERG, H. J. C. SWAN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; Cedars-Sinai Medical Center; California, University, Los Angeles) et al. American College of Cardiology, Journal (ISSN 0735-1097), vol. 5, April 1985, p. 929-933. Research supported by the Cedars-Sinai Medical Center and NASA. refs

Seventy samples of human cadaver atherosclerotic aorta were irradiated in vitro using a 308 nm xenon chloride excimer laser. Energy per pulse, pulse duration and frequency were varied. For comparison, 60 segments were also irradiated with an argon ion and an Nd:YAG laser operated in the continuous mode. Tissue was fixed in formalin, sectioned and examined microscopically. The Nd:YAG and argon ion-irradiated tissue exhibited a central crater with irregular edges and concentric zones of thermal and blast injury. In contrast, the excimer laser-irradiated tissue had narrow deep incisions with minimal or no thermal injury. These preliminary experiments indicate that the excimer laser vaporizes tissue in a manner different from that of the continuous wave Nd:YAG or argon ion laser. The sharp incision margins and minimal damage to adjacent normal tissue suggest that the excimer laser is more desirable for general surgical and intravascular uses than are the conventionally used medical lasers. The Air Force Aerospace Medical Research Laboratory's (AFAMRL) Head-Spine Model (HSM), a discrete element model of the human head-spine structure, is described. This model was developed to provide a mathematical means for the investigation of three-dimensional head-spine structure dynamic response and injury likelihood in impact environments and to serve as a design tool for the evaluation of crewmember-ejection system impact interactions. Results are presented from a study which involved the use of the HSM to evaluate the effects of variations in certain ejection system parameters on head-spine structure ejection response and injury likelihood. ADVANCES IN NERVE CELL RESEARCH
Y. CHAZOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UB-85-025) p 2-4 10 Dec. 1985 Transl. into ENGLISH from Pravda (Moscow), 16 Aug. 1985 p 6
Avail: NTIS HC A05/MF A01

All excitability which is dependent on the existence of molecular structure of the cell membrane, the ion channels, is discussed. The systems operation of living organisms depends on the fine coordination of the ion channel action. Ion channels contribute to initiation of cardiac and smooth muscle contraction, endocrine secreation of enyzmes and hormones, cell growth and division, and regulation of cell metabolism. Approches towards the development of methods to control the action of ion channels and the function of nerve cells are identified. E.A.K.

TRANSPORT OF ARTERIAL BLOOD GATES THROUGH HUMAN SKIN Ph.D. Thesis
J. E. BAUMGARDNER 1985 149 p
Avail: Univ. Microfilms Order No. DA8515346

The physiology of the transport of arterial blood gases through human skin has important applications in non-invasive monitoring.

A simple analytical model has been developed that relates flux of arterial gas through skin to arterial tension, skin blood flow, skin diffusional resistance, and skin metabolism. In addition, a mass specreal approach has been devised to accurately measure gas flux through human skin. Flux of helium and oxygen through human skin at constant temperature is well-described by the simple linear analytical model. Increasing surface temperature in the range 33-43 C results in a much larger increase in oxygen efflux than in helium efflux for intact skin. Skin perfusion was approximated from helium efflux for skin that had been stripped with cellophane tape. Estimates of skin perfusion compare favorably to previously reported values obtained by other techniques. Values for skin perfusion were combined with helium and oxygen data to calculate skin diffusion conductance. Dissert. Abstr.

The flight of two squirrel monkeys and 24 rates on Spacelab-3 was the first mission to provide hand-on maintenance on animals in a laboratory environment. With few exceptions, the animals grew and behaved normally, were free of chronic stress, and differed from ground controls only for gravity-dependent parameters. One of the monkeys exhibited symptoms of space sickness similar to those observed in humans, which suggests squirrel monkeys may be good models for studying the space-adaptation syndrome. Among the wide variety of parameters measured in the rats, most notable was the dramatic loss of muscle mass and increased fragility of long bones. Other interesting rat findings were those of suppressed interferon production by spleen cells, defective release of growth hormone by somatotrophs, possible dissociation of circadian pacemakers, changes in hepatic lipid and carbohydrate metabolism, and hypersensitivity of marrow cells to erythopoietin. These results portend a strong role for animals in identifying and elucidating the physiological and anatomical responses of mammals to microgravity. Author

Physiological and psychological disruptions caused by transmeridian flights may affect the ability of flight crews to meet operational demands. To study these effects, 9 Royal Norwegian Airforces P3-Orion crewmembers flew from Norway to California (-9 hr), and back (+9 hr). Rectal temperature, heart rate and wrist activity were recorded every 2 min, fatigue and mood were rated every 2 hr during the waking day, and logs were kept of sleep times and ratings. Subjects also completed 4 personality inventories. The time-zone shifts produced negative changes in mood which persisted longer after westward flights. Sleep quality (subjective and objective) and duration were slightly disrupted (more after eastward flights). The circadian rhythms of sleep/wake and temperature both completed the 9-hr delay by day 5 in California, although temperature adjusted more slowly. The size of the delay shift was significantly correlated with scores on extraversion and achievement need personality scales. Response to the 9-hr advance were more variable. One subject exhibited a 15-hr delay in his temperature rhythm, and an atypical sleep/nap pattern. On average, the sleep/wake cycle (but not the temperature rhythm), completed the 9-hr advance by the end of the study. Both rhythms adapted more slowly after the eastward flight. Author

The development, method of production, characterization and methods of use of two hybridomas, CldU-1 (ATCC Accession No. HB-8321) and CldU-2 (ATCC Accession No. HB-8320), are described. These secrete IgG1(K) immunoglobulins react with halodeoxyuridine (HdU or halodU) such as bromo, chloro, fluoro and iodo deoxyuridine (BrdU, CldU, FdU and IdU), whether these are free in solution or incorporated into single stranded DNA in whole cells. The antibodies do not react with naturally occurring free nucleic acids or with deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) polymers. These antibodies are suitable for use in enzyme immunoassays for free CldU, FdU, IdU and BrdU and for detecting cells with these nucleotides incorporated into them. The nomoclonal antibodies are useful in the detection of the sensitivity of tumor cells to specific chemotherapeutic agents, in the measurement of the rate of cellular DNA synthesis, in the measurement of the rate of proliferation of normal and malignant cells and in the detection of HPRT deficiency in cells. HEALTH AND ENVIRONMENTAL EFFECTS OF COMPLEX CHEMICAL MIXTURES
1985 117 p Preceedings of Conference held in Chicago, Ill., 17 Jun. 1985
(DE85-016336; CONF-8506155) Avail: NTIS HC A06/MF A01

The Office of Health and Environmental Research (OHER) of the Department of Energy supports a broad long-term research program on human health and environmental effects from potential exposure to energy-related complex chemical mixtures. The program seeks basic mechanistic data on the effects of complex mixtures at the cellular, molecular, and whole animal levels to aid in predicting human health effects and seeks ecological data on biological and physical transformations in the mixtures, concentrations of the mixtures in various compartments of the environment, and potential routes for human exposure to these mixtures (e.g., food chain). On June 17 to 18, 1985, OHER held its First Annual Technical Meeting on the Complex Chemical Mixtures Program in Chicago, Ill. The primary purpose of the meeting was to enable principal investigators to report the research status and accomplishments of ongoing complex chemical mixture studies supported by OHER. To help focus future research directions round table discussions were conducted. DOE

IN VIVO DETECTION, LOCALIZATION AND MEASUREMENT OF RADIONUCLIDES IN MAN: A DETECTION SYSTEM FOR THE LOCALIZATION AND MEASUREMENT OF SMALL AMOUNTS OF PHOTON EMITTERS Final Report
G. R. LAURER 1 Aug. 1985 41 p
(Contract DE-AC02-78EV-04957)
(DE85-017601; DOE/EV-04957/5; COO-4957-5) Avail: NTIS HC A03/MF A01

A new detector has been devised which, by providing a significant increase in geometric counting efficiency, allows a concurrent reduction in the amount of radioactivity needed to produce an image of the deposition site(s) of radionuclides in humans and/or experimental animals. Consisting of four wedgeshaped NaI(Tl) crystals in a unique geometrical arrangement, the crystals themselves function as the collimator generally employed in radionuclide imaging applications. The four crystals, when coupled, become a 4-crystal unit detector; joined so their active faces form the silhouette of a pyramid. The outside, vertically oriented, rectangular faces of each crystal are placed back-to-back with those of adjoining detectors. Thus, small or large arrays of the 4-crystal unit detectors may be assembled. In practice, the array of detectors will be moved in fixed, discrete steps over the source of radiation to be imaged. As a result of its shape, each count obtained from each crystal at each counting position is different, relative to its position above the source. The array of counts obtained in this manner is the raw spatial information. They are used in a system of linear, simultaneous equations which relate the position of the detectors to the counts obtained at each position. The solution of these equations - utilizing the predetermined point-source-response (PSR) function of the crystals - yields a two-dimensional image of the deposition site of the radioactivity.

CHARACTERIZATION OF YAG LASERS FOR OPHTHALMOLOGIC APPLICATIONS [CARACTERISATION DES LASERS YAG POUR L'OPHTALMOLOGIE]
A. P. JOSSE 1985 5 p In FRENCH Presented at Intern. Seminar on Caracterisation des LASERS YAG pour l'Ophtalmol., Lorient, France, 5-6 Sep. 1985
(SNIAS-852-430-107) Avail: NTIS HC A02/MF A01

The shock waves produced in a water medium by a YAG laser source are measured and visualized. The human eye optical system is simulated by an experimental set-up. A pulsed YAG laser with up to 1 J power is used. The time and space visualizations are based on the variation of the optical refraction index in the water. Time visualization by the Schlieren method allows measuring of the propagation velocity of the shock wave at various distances from the plasma initiation point. Photographs are included. Pressure is evaluated from velocity following the finite difference method.

BIOASSAY OF MILITARY RELEVANT COMPOUNDS FOR CARCINOGENIC ACTIVITY BY THE STRAIN A MOUSE LUNG TUMOR BIOASSAY Final Phase Report, Mar. 1983 - May 1984
G. D. STONER Jan. 1985 17 p
(Contract DAMD17-81-C-1178; DA PROJ. 3M1-61102-BS-10)
(AD-A156772) Avail: NTIS HC A02/MF A01 CSCL 06E

Two dye compounds, C.I. Solvent Yellow 33 and a mixture of C.I. Solvent Green 3-C.I. Solvent Yellow 33, utilized in colored smoke grenades, were tested for carcinogenic potential in the strain A mouse lung tumor bioassay. The maximum tolerated dose for each dye was determined to be 25 mg/kg. At total doses of 600, 300 and 120 mg/kg, C.I. Solvent Yellow 33 and a mixture of C.I. Solvent Green 3-C.I. Solvent Yellow 33 did not produce an increase in the lung tumor response (i.e., the percentage of mice with lung tumors per mouse) when compared to vehicle (tricaprylin) controls. Therefore, at the dose levels administered both dyes are non-carcinogenic in the strain A mouse lung tumor bioassay under the conditions of the test. At necropsy, mice tested with either compound have significant quantities of accumulated dye in their tissues. This observation suggests that the dyes are either not metabolized or only partially metabolized by the animals.

A COMPARISON OF POSTMORTEM CORONARY ATHEROSCLEROSIS FINDINGS IN GENERAL AVIATION PILOT FATALITIES
C. F. BOOZE, JR. and C. M. STAGGS Aug. 1985 12 p
(AD-A159811; DOT/FAA-AM-85-6) Avail: NTIS HC A02/MF A01 CSCL 06E

Autopsy reports of 710 pilots involved in fatal general aviation accidents and received by the FAA for the years 1980 to 1982 were reviewed to appraise the age-specific prevalence of coronary atherosclerosis among the autopsied group and compare findings with those of an earlier study of a similar pilot group. Sixty-nine percent of the autopsies on pilots killed in aircraft accidents indicated some degree of coronary atherosclerosis ranging from minimal to severe. This finding is higher than for a similar group of pilots studied during the years 1975 to 1977. However, only about 2.5% of the 1980 to 1982 study group were found to have severe coronary atherosclerosis, compared with 5% in the previous study. Prevalence of severe coronary atherosclerosis increased with age from 5.8 per 1,000 for ages less than 40 years to 73.9 for ages 50 years and above, also reflecting lower age-specific rates for severe coronary atherosclerosis than were found in the previous study. Recent emphasis on autopsy format and attention to sudden incapacitation is felt to have resulted in more accurate reporting for recent years. Prevalence of severe coronary atherosclerosis among the recently studied pilot group was less than that observed in an earlier study of a similar group. GRA

EXPEDIENT METHODS OF RESPIRATORY PROTECTION. 3: SUBMICRON PARTICLE TESTS AND SUMMARY OF QUALITY FACTORS
J. M. PRICE, D. W. COOPER, and C. S. YEE Jul. 1985 86 p refs
(TI85-018278; NUREG/CR-3537; NRC-A-1042; SAND-83-7450) Avail: NTIS HC A05/MF A01

The efficacy of readily available materials, such as cotton fabrics, toweling, a surgical mask, and a single-use respirator, for providing emergency respiratory protection was evaluated by determining the filtration efficiency as a function of aerosol particle size over the size range of 0.001 to 5.0 micron and as a function of filtration face velocity. Filtration face velocity was set at 1.5, 5.0, and 15.0 sq cm. The equipment and procedures used to obtain efficiency measurements for particles 0.5 micron in diameter and smaller are described. Particles with diameters from 0.10 to 0.50 micron proved to be the most difficult sizes of particles to remove. Particles smaller than 0.10 micron were removed due to diffusion while particles larger than 0.50 micron were removed due to inertia and gravitational settling. Deposition of the smallest particles was favored by the use of low face velocities. A fractional efficiency curve was determined for each material at each velocity for comparison. Values of the quality factor were calculated. Quality factors were less for wet materials than for dry; less at high velocities rather than low; and best for the single-use respirator mask, next best for the surgical mask and often third best for the toweling. ASSESSMENT OF INDIVIDUAL HUMAN EXPOSURES TO OZONE IN A HEALTH STUDY
D. T. MAGE, M. RAIZENNE, and J. SPENGLER Aug. 1985 17 p refs
(PB85-245975; EPA-600/D-85-195) Avail: NTIS HC A02/MF A01 CSCL 06T

The minute dose of ozone delivered to the lower respiratory tract of a subject depends upon the ozone concentration inhaled, the minute volume (Ve 1/min) and the fraction of the inhaled ozone that penetrates the nasopharyngeal passages to enter the trachea. The ozone concentration (X) depends on the time of day and whether the subject is indoors or outdoors. The minute volume depends on the subject's age, sex, weight, and physical activity level. The fractional deposition of ozone depends on the concentration inhaled (X), the minute volume (Ve), and the mode of breathing (nasal or oronasal). These dependencies are reviewed and a calculation of a daily ozone dosage is presented for a prototypical 12-year old child at summer camp who varies his physical activities in indoor and outdoor settings over a 24-hour period. THE EFFECT OF SKILL ON PERFORMANCE UNDER AN ENVIRONMENTAL STRESSOR
P. A. HANCOCK (Southern California, University, Los Angeles, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Jan. 1986, p. 59-64. refs

The paper examines the effect of individual skill level upon task performance in transient extreme heat. A summary of published data suggests that individuals who are skillful at the task are better able to withstand the detrimental effect of the stress exposure than their unskilled counterparts. Three theoretical explanations of such performance superiority are reviewed: behavioral arousal; attentional capacity; and automatic and controlled processing. It is concluded that the automatic and controlled information processing approach holds the greatest potential to account for this effect at the present time. It is suggested that the ability of skilled subjects who are able to resist the effect of heat stress may be a more general attribute of personnel who operter under a variety of nonoptimal environmental conditions. INVARIANT TUNING OF MOTION AFTEREFFECT
M. J. WRIGHT and A. JOHNSTON (Brunel University, Uxbridge, England) Vision Research (ISSN 0042-6989), vol. 25, no. 12, 1985, p. 1947-1955. Research supported by the Medical Research Council of England. refs

Motion aftereffects (MAE) to drifting gratings were measured with a cancellation technique. For a constant adapting grating, MAE cancellation velocity increased linearly with visual field eccentricity. The slope of the function was dependent upon adapting temporal frequency. MAE velocity was independent of spatial frequency (2-16 c/deg) and approximately constant when expressed as an M-scaled velocity. The MAE was broadly tuned to temporal frequency and temporal tuning was independent of spatial frequency and eccentricity. Reducing contrast over the range 1.0-0.1 reduced the magnitude of the MAE at high temporal frequencies, but had no influence at low and moderate temporal frequencies. The results support a ratio model of velocity coding whose spatial reference varies with eccentricity in approximate accordance with the human cortical magnification factor. Author

VELOCITY CODING - EVIDENCE FROM PERCEIVED VELOCITY SHIFTS
A. T. SMITH (University College, Cardiff, Wales) Vision Research (ISSN 0042-6989), vol. 25, no. 12, 1985, p. 1969-1976. Sponsorship: Medical Research Council of England. refs
(Contract UKMRC-G821/3197N)

Measurements of the perceived velocities of moving patterns were made under a variety of conditions in an attempt to gain information concerning the way in which velocity is encoded in the visual system. Adaptation to a pattern moving in the same or opposite direction reduces the perceived velocity of a moving test pattern, but only if the adaptation pattern moves as fast as or faster than the test pattern. The aftereffect peaks at an adaptation velocity slightly higher than the test velocity and then remains constant at higher velocities. Similar results were obtained for several types of pattern. Perceived velocity reduction also follows adaptation to a flickering homogeneous field. The results can be explained in terms of a theory of velocity coding in which two channels are considered in terms of variations in the velocity sensitivities of the neurones they comprise. Author

TASK PARAMETERS AFFECTING INDIVIDUAL DIFFERENCES IN PURSUIT AND COMPENSATORY TRACKING PERFORMANCE
D. BARTRAM, N. BANERJI, D. ROTHWELL, and P. SMITH (Hull, University, England) Ergonomics (ISSN 0014-0139), vol. 28, Dec. 1985, p. 1633-1652. Research supported by the Army Personnel Research Establishment. refs

Two tracking tasks, the control-velocity tester and the sensor motor apparatus (both of which are currently used as aptitude tests for the selection of candidates for pilot training), provide relatively independent measures of performance. As part of the program of research related to the production of the Micropat automated testing system, a number of studies were carried out to identify, the parameters accounting for the functional dissimilarity of these two tasks. While varying control law mixture had a relatively small effect on task intercorrelations, both variation in display mode and number of dimensions substantially reduced them. The effects of limb assignment were complex, though in general they showed that for two-dimensional tasks the important factor was whether control was carried out using a single limb rather than using separate limbs for each dimension. APPLICATION OF COMPONENT SCORING TO A COMPLICATED COGNITIVE DOMAIN
K. K. TATSUOKA and K. YAMAMOTO 15 May 1985 29 p
(Contract N00014-82-K-0604)
(AD-A157897; AD-E900470; CERL-85-2-ONR) Avail: NTIS HC A03/MF A01 CSCL 05J

The recent development of cognitive psychology and science suggests that the lack of understanding of important structural relations between the entities in a problem-solving domain causes difficulties in learning. This study proposes a new scoring method by which the structural relations as well a processes used in subcomponents of the knowledge structure are taken into account when determining the scores. By so doing, a score of I derived by wrong reasons will be eliminated and patterns of zeros and ones will contain information closely associated with student's cognitive processes. The procedure is illustrated with basic electricity problems. GRA

PHOTOSIMULATION OF TARGET ACQUISITION IN THE PRESENCE OF SMOKE: A PILOT STUDY
J. M. VALETON and J. J. VOS Nov. 1984 19 p refs
(Contract A79/KL/151)
(IZF-1984-36; TDCK-79980) Avail: NTIS HC A02/MF A01

A quality measure derived from smoke screen hole statistics was related to the probability of target detection. A background scene (hilly landscape), a target (tank silhouette in 1 of 20 possible locations) and a smoke screen (strong homogeneous veil of light) were projected onto a screen. Observers searched the scene with

a rotatable telescope (magnification x 1) and fired when a target was found. The smoke projector was switched on and off to produce sequences of holes and obscurations corresponding to a prescribed smoke screen quality. Results show that smoke quality is a good predictor of target screening; targets are found only when the sight passes over them; even relatively conspicuous targets do not attract enough attention to disrupt the regular search pattern; and search speed is strongly determined by target conspicuousness. COMPUTER TOOLS AND TECHNIQUES FOR ANALYSIS OF DISCRETE DATA FROM AIRCREW AUTOMATED ESCAPE SYSTEMS (AAES)
J. D. FRITSVOLD and J. E. VETTER (U.S. Navy, Analytical Systems Div., Washington, DC) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 37-40. refs

Analyses have been conducted for automated aircrew escape systems, using statistical models generated in part by computer tools to study the significant factors that contribute to problems during ejections or emergency escapes. Extensive use is made in this work of discrete variables that are presented in a frequency table of cross classifications. Significant associations are thereby established, while spurious ones are rejected. The computational capability in question allows the study of the effects of several factors simultaneously on a variable of interest, such as the likelihood of a severe injury or fatality during an aviation emergency. O.C.

MOLECULAR SIEVE OXYGEN SYSTEMS AND AIRCRAFT ROLE
R. CASSIDY and A. H. BAKER (Normalair-Garrett, Ltd., Yeovil, England) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 99-102.

Aircraft type will extert an influence on the size and configuration of future molecular sieve, pressure swing absorption-operation On-Board Oxygen Generation Systems (OBOGS). Attention is given to the design requirements most likely generated by OBOGS application to such aircraft types as single seat fighters, multiperson crew fixed wing aircraft, trainers, and helicopters. OBOGSs can furnish oxygen over essentially unlimited mission durations. O.C.

A86-19329
LIMB RESTRAINT EVALUATOR (LRE)
T. GUSTIN (Systems Research Laboratories, Inc., Dayton, OH) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 183-187. USAF-supported research.

The present paper provides a description of a state-of-art data acquisition and recording system which is part of an advanced ejection system test manikin developed by an American company. The manikin is the Limb Restraint Evaluator (LRE), which was designed to test restraint devices to be incorporated into modern aircraft ejection equipment by the U.S. Air Force. The design goals of the LRE are considered, taking into account the successful sensing and capturing of data for 96 phenomena sources for a free-flight test article for the ACES II restraint tests. Difficulties related to the extremely large number of data channels were overcome by employing a Pulse Code Modulation (PCM) type system (time multiplexed). Attention is also given to the use of a low pass filter, a challenge related to telemetry dropout, the selection of onboard storage technique, and the CPU. G.R.

A86-19330
HUMAN ERROR IN LIFE SUPPORT OPERATIONS
W. L. EPPERSON and J. GAVERN (USAF, Wright-Patterson AFB, OH) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 188-191. refs

An assessment is made of the impact of human factors on the activities of the four main groups involved in the operations of life support systems: designers, system maintainers, life support instructors and trainers, and aircrew members. Aside from the factors influencing all individuals' general behavior, such as personal, psychological, and physical problems, there are specific personal characteristics crucial for the success of life support systems at each of the four stages of execution. Thus, the designer must have a thorough understanding of the relationship of the equipment to the aircraft and the crewmember. For example, in the design of a parachute harness, it is important to consider the

stature of individuals. Boredom and fatigue, together with tight flying schedules, are the main contributors to maintenance failures, while poorly written or incomplete instructions may lead to faulty execution. Finally, crewmembers' overconfidence often leads to neglect of safety precautions in favor of comfort during flight.

A86-19333
THE EFFECT OF WATER INGRESS ON BUOYANCY AND THERMAL QUALITY OF SURVIVAL SUITS
A. PASCHE (Norwegian Underwater Technology Centre, Laksevas, Norway) and R. ILMARINEN (Institute of Occupational Health, Helsinki, Finland) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 204-207. Research supported by Statoil. refs

Several survival suits have been tested regarding water leakage in the suit during evacuation from a sinking and turned helicopter, total buoyancy for a person dressed in a suit, and the suits insulating properties after evacuation from the helicopter. Water content in the suit followed an evacuation with partly open zippers would be in order of 9-18 kg. Closed-off air in the suit could give some suits a buoyancy in a turned helicopter as high as 40-50 kg. Water leakage into the suits, which is likely to occur, would change the thermal insulation properties of the suits. Even smaller water ingress would have considerably effect on body cooling, while water ingress in a magnitude as established for the evacuation situation result in a very rapid drop in core temperature of the subject (2.0-2.5 C/hour). Author

A86-19336
PROTECTIVE RESPIRATOR FOR THE AAH-64 ADVANCED ATTACK HELICOPTER
D. M. ENGLISH (U.S. Army, Chemical Research and Development Center, Aberdeen Proving Ground, MD) and L. DICKERSON (ILC Industries, Inc., Frederica, DE) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 223-226. Army-supported research.

The present paper is concerned with the background and development philosophy utilized in designing and fabricating a protecting mask system for the U.S. Army AH-64 Attack Helicopter. The very sophisticated weapons and flight systems employed by this helicopter require close optical coupling to various devices. For this reason, current protective masks cannot be used effectively. The U.S. Army issued, therefore, a contract for the development of a protective mask which would interface with the AH-64 Integrated Helmet and Display Sighting System (IHADSS). Attention is given to a description of the AH-64 helicopter, the operational capabilities of the AH-64, mask system requirements, a mask system description, a blower system description, and a program overview. An accelerated development of the IHADSS mask system will allow the U.S. Army to field the AH-64 helicopter on schedule. G.R.

A86-19338
COULD ANTHROPOMETRIC DUMMY DATA BE USED TO PREDICT INJURY TO HUMANS?
C. D. GRAGG (USAF, Holloman AFB, NM) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 233-236.

Anthropometric dummy and ejection seat data from two recent sled test programs were analyzed. The objective of the analysis was to determine the value of anthropometric dummy data for predicting the probability of spinal and/or disabling injury. One program used a seat which has been in the inventory for many years; the other used a modern, high performance seat. The two programs consisted of a total of 16 tests. All tests were conducted on the High Speed Test Track at Holloman Air Force Base, New Mexico. The results showed some promise for use of the Dynamic Response Index (DRI). They showed little promise for the use of Gx and Gy acceleration data. Author

A86-19341
DEVELOPMENT OF AN IMPROVED LIQUID COOLING SYSTEM
R. ALGERA (ILC Industries, Inc., Frederica, DE) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 251-254.

Design changes required in liquid cooling systems to improve the efficiency of the system are discussed. The cooling system designed consists of: (1) a jacket outerlayer fabricated from looseweave nylon stretch fabric with a network of soft, flexible tubing woven in, (2) an inner layer of lightweight nylon tricot, (3) a heat exchanger assembly, and (4) a backpack. The entire ensemble weighs 12.15 lb dry and 24.05 with the coolant fluid and ice. The components and function of the heat exchanger assembly are described. The use of a slush machine to resupply ice to the heat exchanger assembly is studied. The applicability of the cooling system is tested. Three experiments are performed: one with just the CB ensemble, the second with the CB ensemble and a liquid cooling system of one hour duration at a heat removal rate of 1200 BTU/hr, and the third with the CB ensemble and a cooling system of a half-hour duration at 1200 BTU/hr. It is concluded that the cooling system is a practical solution to the heat stress problems of ground support personnel; however, the weight of the system needs to be reduced for the system to function at maximum efficiency. PILOT UNDERWATER HIGH PRESSURE EMERGENCY BREATHING SYSTEM
M. RATAJCZAK (Moog, Inc., East Aurora, NY) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 259-262.

The High Pressure Emergency Breathing System (HPEBS) has the objective to provide life support for an aircrewman in the event of a parachute landing over water. A water activated switch closes the antisuffocation valve in the breathing system, and the HPEBS is actuated. A utilization of the HPEBS increases survival possibilities for an aircrewman in a high sea state. The HPEBS is to provide 500 standard liters of air for consumption. The air is stored in a high pressure spherical vessel. A pyrotechnic actuator and a pressure reducer is also provided. Attention is given to details of pressure vessel design, the pyrotechnic squib, aspects of pressure reducer design, and acceptance level test results.

LABORATORY AND FLIGHT TESTING OF BALLISTIC PROTECTIVE HEADGEAR FOR ROTARY WING AIRCREW
D. S. MCCAULEY (U.S. Naval Material Command, Naval Air Development Center, Warminster, PA) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 263-268. refs

The results of laboratory and flight tests on two types of ballistic protective gear developed for helicopter aircrew that can be exposed to small arms fire and fragments are reported. The type 1 system is a complete ballistic protective helmet assembly, while the type 2 system consists of a ballistic clip-on unit which can be quickly added to a lightweight, form-fitting helmet. Both systems were shown to meet the ballistic requirements, when tested in accordance with standard requirements of an average ballistic limit, V50, of 1150 ft/s for a 17 grain, 0.22 caliber, type 2 fragment-simulating projectile, and demonstrated good impact

resistance. Although most subjects in the flight tests preferred the clip-on system because of weight considerations, the ANVIS ready helmets available to almost all battlefield aircrew are not compatible with a ballistic clip-on bonnet. Therefore, further development of the type 1 system only is recommended. I.S.

THE STATE OF THE ART OF ANTHROPOMORPHIC MANIKINS AND REQUIREMENTS FOR THE EVALUATION OF ADVANCED AIRCRAFT EJECTION SYSTEMS
J. A. TIEBER (Systems Research Laboratories, Inc., Dayton, OH) IN: SAFE Association, Annual Symposium, 22nd, Las Vegas, NV, December 9-13, 1984, Proceedings . Van Nuys, CA, SAFE Association, 1985, p. 269-275.

A study was conducted to define the capabilities of existing anthropomorphic manikins and the capabilities required of modern manikins to be suitable for the evalution of advanced aircraft escape systems. Specifications for an advanced ejection system test manikin, which resemble and act like a human body when subjected to aerodynamic and inertial loadings associated with aircraft escape conditions, include the simulation of human response to force loadings at various body components, anthropometric accuracy, mass and inertial properties of various body segments, joint articulation, and structural strength. Data acquisition considerations include the type and placement of sensors, number of data channels, data processing and formatting, and on-board storage and/or telemetry requirements. The standard packaging, placement, and environmental protection factors also must be considered. The development of a family of manikins, consisting of an average member and two members representing the fifth and 95th percentiles of the anthropometric spectrum, is recommended. I.S.

AN EXPERT SYSTEMS APPROACH TO AUTOMATED FAULT MANAGEMENT IN A REGENERATIVE LIFE SUPPORT SUBSYSTEM
J. T. MALIN and N. LANCE, JR. (NASA, Johnson Space Center, Houston, TX) AIAA, Aerospace Sciences Meeting, 24th, Reno, NV, Jan. 6-9, 1986. 9 p. refs
(AIAA PAPER 86-0321)

This paper describes FIXER, a prototype expert system for automated fault management in a regenerative life support subsystem typical of Space Station applications. The development project provided an evaluation of the use of expert systems technology to enhance controller functions in space subsystems. The software development approach permitted evaluation of the effectiveness of direct involvement of the expert in design and development. The approach also permitted intensive observation of the knowledge and methods of the expert. This paper describes the development of the prototype expert system and presents results of the evaluation. Author

UNDERLYING BEHAVIORAL PARAMETERS OF THE OPERATION OF TOUGH-INPUT DEVICES - BIASES, MODELS, AND FEEDBACK
D. B. BERINGER and J. G. PETERSON (Wisconsin, University, Madison) Human Factors (ISSN 0018-7208), vol. 27, Aug. 1985, p. 445-458. refs

Touch-entry devices have exhibited a number of advantages in relatively low-resolution applications. Requirements for high-resolution input must, however, take into account the inherent biases and limitations of the operator. In this study performance biases in the use of an infrared touch-input device were examined with the input (display) surface at various declinations. A general bias to touch low and to the right of targets was found, the low bias increasing with increasing display declination. Attempts to reduce bias error through simple models based upon earlier trials were more effective when derived from individual performances rather than populational behavior (averages). Handedness effects on performance were also found. Training is discussed as a viable alternative, along with preliminary training results. Author

ROBOTICS AND THE SPACE STATION
J. N. GOWDY (Clemson University, SC) and R. S. WALLACE (Carnegie-Mellon University, Pittsburgh, PA) IN: SOUTHEASTCON '84; Proceedings of the Conference, Louisville, KY, April 8-11, 1984 . New York, Institute of Electrical and Electronics Engineers, 1984, p. 173-176.

This paper is based on the authors' activities associated with the NASA/ASEE summer study 'Autonomy and the Human Element in Space' at Stanford University in 1983. The paper considers proposed tasks for robots in connection with space station activities. Generic capabilities needed to execute these tasks are also discussed. It is argued that NASA should sponsor robotics research which is directly connected with space activities. Author

ORBITAL FLIGHT TEST OF THE MANNED MANEUVERING UNIT
R. L. STEWART (NASA, Johnson Space Center, Houston, TX) IN: Society of Experimental Test Pilots, Symposium, 28th, Beverly Hills, CA, September 26-28, 1984, Proceedings . Lancaster, CA, Society of Experimental Test Pilots, 1984, p. 282-312.

Based on the experience provided by the first astronaut maneuvering unit used in the early extravehicular activities missions, a manned maneuvering unit (MMU) was developed that culminated in emergence of the M509 unit. The M509 unit, flown on the STS41-B, is a self-contained propulsive backpack. A flight support station (FSS) provides cargo bay stowage for the MMU, serves as a donning/doffing station, and provides an interface with the Orbiter gaseous nitrogen system for propellant refueling, electrical power for heaters, and temperature instrumentation. The MMU propulsion system, its control system, the electrical system and the flight displays are described. The orbital flight test has demonstrated superior handling and flying qualities of the MMU. CONTROLLED ECOLOGICAL LIFE SUPPORT SYSTEMS FOR SPACE HABITATS
P. BUCHANAN (NASA, Kennedy Space Center, Cocoa Beach, FL) Japanese Journal of Aerospace and Environmental Medicine (ISSN 0387-0723), vol. 21, Dec. 1984, p. 70-74.

The development of regenerative life support systems to meet the physiological requirements of humans in space is described. A review of previous research on regenerative systems is presented. NASA's Controlled Ecological Life Support System (CELSS) program, which is to develop an environment for a human space crew, is discussed. The table of physiological requirements of an average human and the logical system approach to planning a closed system created by Spurlock and Modell (1976, 1978) are examined. The weight of food and oxygen with respect to lift-off weight is investigated. The creation of the proper atmosphere for space, by balancing all the necessary parameters is studied. The need for a mineral and fluid balance and methods of maintaining it are analyzed. The required cooperation between physicians, physiologists, and nutritionists for the success of the CELSS program is discussed. I.F.

A NEW APPLICATION OF ADAPTIVE NOISE CANCELLATION
W. A. HARRISON (Sanders Associates, Inc., Nashua, NH), J. S. LIM (MIT, Cambridge, MA), and E. SINGER (MIT, Lexington, MA) IEEE Transactions on Acoustics, Spech, and Signal Processing (ISSN 0096-3518), vol. ASSP-34, Feb. 1986, p. 21-27. Research sponsored by Sanders Associates, Inc. refs
(Contract NR PROJECT 049-506; N00014-81-K-0742; F19628-85-K-0028; NSF ECS-80-07102)

Widrow et al's (1975) adaptive noise cancellation (ANC) method is applied to the case where an acoustic barrier exists between the primary and reference microphones. ANC, by updating the coefficients of the noise estimation filter only during silence, can furnish substantial noise reduction with little speech distortion even when the acoustic barrier provides only moderate attenuation of acoustic signals. An evaluation is made of a modification of ANC for the oxygen facemasks worn by fighter pilots; if a noise field is created using a single source, an 11-dB SNR improvement is achieved by attaching a reference microphone to mask's exterior. EFFECT OF TIME SPAN AND TASK LOAD ON PILOT MENTAL WORKLOAD
S. L. BERG and T. B. SHERIDAN Jan. 1986 152 p refs
(Contract NAG2-227)
(NASA-CR-177388; NAS 1.26:177388) Avail: NTIS HC A08/MF A01 CSCL 05H

Two sets of simulations designed to examine how a pilot's mental workload is affected by continuous manual-control activity versus discrete mental tasks that included the length of time between receiving an assignment and executing it are described. The first experiment evaluated two types of measures: objective performance indicators and subjective ratings. Subjective ratings for the two missions were different, but the objective performance measures were similar. In the second experiments, workload levels were increased and a second performance measure was taken. Mental workload had no influence on either performance-based workload measure. Subjective ratings discriminated among the scenarios and correlated with performance measures for high-workload flights. The number of mental tasks performed did not influence error rates, although high manual workloads did increase errors. E.A.K.

CATALYTIC DISTILLATION WATER RECOVERY SUBSYSTEM
P. BUDININKAS and F. RASOULI Sep. 1985 104 p
(Contract NAS2-11687)
(NASA-CR-177382; NAS 1.26:177382) Avail: NTIS HC A06/MF A01 CSCL 06K

An integrated engineering breadboard subsystem for the recovery of potable water from untreated urine based on the vapor phase catalytic ammonia removal was designed, fabricated and tested. Unlike other evaporative methods, this process catalytically oxidizes ammonia and volatile hydrocarbons vaporizing with water to innocuous products; therefore, no pretreatment of urine is required. Since the subsystem is fabricated from commercially available components, its volume, weight and power requirements are not optimized; however, it is suitable for zero-g operation. The testing program consists of parametric tests, one month of daily tests and a continuous test of 168 hours duration. The recovered water is clear, odorless, low in ammonia and organic carbon, and requires only an adjustment of its pH to meet potable water standards. The obtained data indicate that the vapor phase catalytic ammonia removal process, if further developed, would also be competitive with other water recovery systems in weight, volume and power requirements. A STUDY TO DEFINE A SET OF REQUIREMENTS FOR CLEANSING AGENTS FOR USE IN THE SPACE STATION WHOLE BODY SHOWER Final Report
29 Oct. 1985 95 p
(Contract NAS9-17428)
(NASA-CR-171910; NAS 1.26:171910) Avail: NTIS HC A05/MF A01 CSCL 06K

The objective of this research is to define a set of requirements for a whole body cleansing agent to be used in the Space Station Whole Body Shower System. In addition, cleansing agent candidates are to be identified that are likely to satisfy requirements defined in the first part of the study. It is understood that the main reason for having a Whole Body Shower is to satisfy the physiological, psychological and social needs of the crew throughout the duration of duty in the Space Station. The cleansing agent must also be compatible with the vortex water/gas separator and the water reclamation system. To accomplish these goals the study was divided into six tasks. Author

OPERATIONS RESEARCH TECHNIQUES FOR HUMAN FACTORS ENGINEERS M.S. Thesis
J. H. LIND Jun. 1985 193 p
(AD-A159384) Avail: NTIS HC A09/MF A01 CSCL 05H

In this thesis a variety of operations research techniques and models that are applicable to human factors engineering problems are identified and classified according to the functions or purposes for which they are useful. Several of these techniques are described in sufficient detail for a human factors engineer to determine if they are applicable to a problem of interest. Uses for techniques are illustrated in military-related human factors settings, primarily related to the Navy's antiair warfare mission. References are provided for additional information on each technique. Author (GRA)

PERFORMANCE COMPARISON OF THIRTY, TWO-STAGE DEMAND REGULATORS
I. A. HIMMENS Jan. 1984 25 p refs
(ARE(M6)-TM-83818; BR94139) Avail: NTIS HC A02/MF A01

Thirty, two-stage air demand regulators were tested. Only 2 meet the recommended limits for breathing resistance and work of breathing for the 3 ventilation rates at the maximum depth of 50 msw. A majority of the regulators exhibit rapid degradation of inhalation response at a ventilation rate of 62.5 l/min, beyond their respective maximum depths or as cylinder pressures approach 30 Bar. A WATERPROOF VENT VALVE FOR IMMERSION SUITS
G. RICHARDSON Dec. 1984 20 p refs
(REPT-515; BR95132) Avail: NTIS HC A02/MF A01

An air vent valve for flight crew immersion suits was developed. Experiments show that the valve, closed by hydrostatic pressure, vents an immersion coverall undergoing rapid changes in altitude. Such a valve allows no water to enter the coverall during immersion in water with moderate wave motion or doing normal dinghy entry

drills. Exploitation of the technique significantly improves comfort to users of air immersion coveralls at altitude. It prevents loss of insulation through collapse on descent. The advantages can be maintained without the risk of allowing water to enter the coverall. Extension of the principle to allow microclimatic ventilation by bellows action is suggested. Author (ESA)

ADVANCED SERVOMANIPULATOR DEVELOPMENT
D. P. KUBAN 1985 41 p Presented at the France/US Department of Energy Meeting on Remote Systems Technology, Saclay, France, 2 Sep. 1985
(Contract DE-AC05-84OR-21400)
(DE85-017720; CONF-8509156-2) Avail: NTIS HC A03/MF A01

The Advanced Servomanipulator (ASM) System consists of three major components: the ASM slave, the dual arm master controller (DAMC) or master, and the control system. The ASM is remotely maintainable force-reflecting servomanipulator developed at the Oak Ridge National Laboratory (ORNL) as part of the Consolidated Fuel Reprocessing Program. This new manipulator addresses requirements of advanced nuclear fuel reprocessing with emphasis on force reflection, remote maintainability, reliability, radiation tolerance, and corrosion resistance. The advanced servomanipulator is uniquely subdivided into remotely replaceable modules which will permit in situ manipulator repair by spare module replacement. Manipulator modularization and increased reliability are accomplished through a force transmission system that uses gears and torque tubes. Digital control algorithms and mechanical precision are used to offset the increased backlash, friction, and inertia resulting from the gear drives. This results in the first remotely maintainable force-reflecting servomanipulator in the world. DOE

HUMAN-MACHINE INTERFACES FOR TELEOPERATORS: AN OVERVIEW OF RESEARCH AND DEVELOPMENT AT THE OAK RIDGE NATIONAL LABORATORY. CONSOLIDATED FUEL REPROCESSING PROGRAM
J. V. DRAPER and M. J. FELDMAN 1985 23 p Presented at the France/U.S. Department of Energy Meeting on Remote Systems Technology, Saclay, France, 2 Sep. 1985 Prepared in cooperation with ORNL, Tenn.
(Contract DE-AC05-84OR-21400)
(DE85-017713; CONF-8509156-1) Avail: NTIS HC A02/MF A01

This paper surveys the contributions of human factors to the mission of the Remote Control Engineering (RCE) task over the last 6 years. These contributions can be divided into two areas, research efforts and design efforts. Some of the topics covered in human factors research are manipulator comparisons, investigation of viewing system characteristics, research into the effects of force reflection, and studies of crew size and task allocation. In the area of component design the human factors group was primarily responsible for the conceptual design of the Advanced Integrated Maintenance System (AIMS) control room, including all operator work stations and overall control room architecture. The human factors group also contributed to the design of the AIMS master controller handle. Recent research at the RCE task has centered on comparison of manipulator systems. This research was planned and conducted by the human factors group and other ORNL personnel. The research is aimed at evaluating three important characteristics of manipulator systems: system dynamics, force feedback, and human-machine interface. DOE

THE BIOMORPHIC MODEL OF THE HUMAN PILOT
O. H. GERLACH 1984 134 p refs
(VTH-LR-310) Avail: NTIS HC A07/MF A01

A mathematical model of the overt behavior of a human operator when controling an aircraft-like dynamic element in a closed loop situation is described. Since the aim is to achieve a close correspondence between the physiological and psychological processes going on in the human controller and their mathematical expression in the model, the latter is named the biomorphic model. The model refers only to single-display, single-axis control situations. A computer program selecting the free parameters in the model and calculating their characteristics is discussed. HEAT TRANSFER IN IMPERMEABLE CLOTHING: SWEAT PLAYS A ROLE AFTER ALL
F. J. G. VANDELINDE, H. VANMIDDENDORP, and W. A. LOTENS May 1985 19 p refs In DUTCH; ENGLISH summary
(Contract A81/K/041)
(IZF-1985-9; TDCK-93219) Avail: NTIS HC A02/MF A01

In a laboratory experiment with six subjects, the effective thermal insulation of a totally impermeable outfit was measured in two different conditions to prove that vapor transfer contributes to the total heat release of the subjects. In the first condition, condensation of evaporated sweat in the inside of the outer impermeable was made impossible, in the second condition such condensation was allowed. Processes of humid heat transfer inside the clothing cause a 40% decrease in effective insulation. Therefore, at ambient temperatures lower than skin temperature, heat stress is lower than expected on the basis of clothing insulation judged by thickness or determined in nonhumid situations. Author (ESA)

A COMPUTER AIDED DESIGN (CAD) SYSTEM AS A TOOL FOR THE ERGONOMIST IN DEVELOPING MAN-MACHINE SYSTEMS
P. I. L. MOONEN Jun. 1985 37 p refs In DUTCH; ENGLISH summary
(IZF-1985-10; TDCK-93253) Avail: NTIS HC A03/MF A01

The use of a Computer Aided Design (CAD) system in an anthropometric computer model is discussed. For its presentation function, ease of operation, interpretation, etc. are required. However, for the test function, ergonomic knowledge expressed in standards is demanded. The possibilities and limitations of an existing CAD system are discussed. The profit of the system concerning the test function is doubted, for ergonomic knowledge is rarely expressed in standards. In case of the realization of a test function, a substantial investment is required, justified only by frequent and large-scale use. Author (ESA)

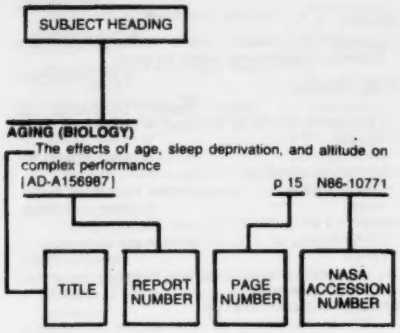
SURVIVAL OF THE JOVIAN PLANETS WITH THE SUN A RED GIANT
S. C. VILA (Pennsylvania, University, Philadelphia) Earth, Moon, and Planets (ISSN 0167-9295), vol. 33, Dec. 1985, p. 219-221.

The survival of the Jovian planets and their satellites as the sun becomes a Red Giant is considered. It is found that the Jovian planets would not lose any matter - not even hydrogen. The satellites would lose their gaseous or volatile envelopes. Their rocky cores would resist melting and survive. Both the planets and the satellites would be unsuited to support human life.
Author

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Task parameters affecting individual differences in pursuit and compensatory tracking performance p 95 A86-20972
AQUEOUS SOLUTIONS
Method for improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system [DE85-017723] p 85 N86-17978
ARTERIES
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure p 90 A86-22542
ARTERIOSCLEROSIS
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568
Laser ablation of human atherosclerotic plaque without adjacent tissue injury p 91 A86-22711
A comparison of postmortem coronary atherosclerosis findings in general aviation pilot fatalities [AD-A159811] p 93 N86-17982
ARTIFICIAL INTELLIGENCE
Proceedings of the Air Force Conference on Technology in Training and Education (TITE) [AD-A157829] p 95 N86-16897
ATTACK AIRCRAFT
Protective respirator for the AAH-64 Advanced Attack Helicopter p 97 A86-19336
AUTOMATIC CONTROL
An expert systems approach to automated fault management in a regenerative life support subsystem [AIAA PAPER 86-0321] p 98 A86-19811
Proceedings of the Air Force Conference on Technology in Training and Education (TITE) [AD-A157829] p 95 N86-16897
AUTOMATION
Computer tools and techniques for analysis of discrete data from aircrew automated escape systems (AAES) p 96 A86-19302
AUTOPSIES
A comparison of postmortem coronary atherosclerosis findings in general aviation pilot fatalities [AD-A159811] p 93 N86-17982

B

BACKGROUND NOISE
A new application of adaptive noise cancellation --- in acoustic barriers p 99 A86-22626
BACKSCATTERING
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity [AD-A159806] p 84 N86-17975

SUBJECT

BACTERIA
Archaebacterial lipids in hot-spring microbial mats p 80 A86-21587
An intron in the 23S ribosomal RNA gene of the archaebacterium Desulfurococcus mobilis p 80 A86-21588

BATHING
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower [NASA-CR-171910] p 99 N86-16903

BAYES THEOREM
Bug distribution and pattern classification [AD-A157898] p 95 N86-16899

BED REST
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402

BEHAVIOR
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

BIBLIOGRAPHIES
Aerospace Medicine and Biology: A continuing Bibliography with Indexes [NASA-SP-7011(277)] p 92 N86-16888

BIOASSAY
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay [AD-A156772] p 93 N86-17981

BIOASTRONAUTICS
An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097

BIOCHEMISTRY
The elusive mechanism of the circadian clock p 82 A86-22650
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

BIOELECTRICITY
Changes in the blood electric conductivity caused by body immersion p 90 A86-22543
Peptides and memory p 95 N86-16884
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions p 84 N86-16885

BIOLOGICAL EFFECTS
The effect of a weak variable ultralow-frequency magnetic field on the development of hypercoagulation syndrome in rats caused by restricted mobility p 79 A86-19300
Aerospace Medicine and Biology: A continuing Bibliography with Indexes [NASA-SP-7011(277)] p 92 N86-16888
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890
Health and Environmental Effects of Complex Chemical Mixtures [DE85-016336] p 92 N86-16892
Biological effects of electric fields [PB85-243467] p 93 N86-16895

BIOLOGICAL EVOLUTION
Archaebacterial lipids in hot-spring microbial mats p 80 A86-21587
An intron in the 23S ribosomal RNA gene of the archaebacterium Desulfurococcus mobilis p 80 A86-21588

BIOLOGICAL MODELS (MATHEMATICS)
The biomorphic model of the human pilot [VTH-LR-310] p 100 N86-17991

BIOMEDICAL DATA
Models for biomedical research: A new perspective [PB85-240067] p 83 N86-16880
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

BIOMETRICS
Non-invasive physiologic brain monitoring in USAF operational environments p 85 A86-19332
Volume and density changes of biological fluids with temperature p 79 A86-20001

BLOOD
Transport of arterial blood gates through human skin p 91 N86-16887

BLOOD CIRCULATION
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525
Microcirculatory changes in rats with burn shock following adaptation to high-altitude hypoxia p 81 A86-22547
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593
Transport of arterial blood gates through human skin p 91 N86-16887

BLOOD COAGULATION
The effect of a weak variable ultralow-frequency magnetic field on the development of hypercoagulation syndrome in rats caused by restricted mobility p 79 A86-19300
The dependence of thromboelastographic indices in healthy subjects on geomagnetic-field conditions p 90 A86-22545

BLOOD FLOW
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594

BLOOD PLASMA
Plasma hormonal responses at graded hypohydration levels during exercise-heat stress p 86 A86-20004
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537
Changes in the blood electric conductivity caused by body immersion p 90 A86-22543
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595
Simultaneous determination of fluid shifts during thermal stress in a small animal model [AD-A159363] p 83 N86-16877

BLOOD PRESSURE
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure p 90 A86-22542

BLOOD VOLUME
The use of thoracic impedance for determining thoracic blood volume changes in man p 87 A86-20406
The effect of enkephalins on metabolic parameters of rats in the presence of acute experimental blood loss p 81 A86-22546
Effects of detraining on cardiovascular responses to exercise - Role of blood volume p 91 A86-22665

BODY FLUIDS
Volume and density changes of biological fluids with temperature p 79 A86-20001
Simultaneous determination of fluid shifts during thermal stress in a small animal model [AD-A159363] p 83 N86-16877

BODY TEMPERATURE
Effects of raised body temperature on reasoning, memory, and mood p 86 A86-20002
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890

BODY WEIGHT
Effect of immobilization stress on body weight in rats p 81 A86-22324

BONE DEMINERALIZATION
Regulation of bone mineral loss during lactation p 82 A86-22713

BRAIN
The risk of arterial hypertension and the features of functional brain asymmetry in workers employed in regularly repeated expedition-type work p 88 A86-22534

BRAIN CIRCULATION
Non-invasive physiologic brain monitoring in USAF operational environments p 85 A86-19332
Cerebral thrombosis at altitude - Its pathogenesis and the problems of prevention and treatment p 87 A86-20410
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535

BRAIN DAMAGE
Increased resistance of the brain to hypoxia due to a combination of lithium hydroxybutyrate and indomethacine p 81 A86-22548

BREADBOARD MODELS
Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

BREATHING
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005

BREATHING APPARATUS
Psychological problems associated with the wearing of respiratory protective devices: A review [FOA-C-40216-C2] p 101 N86-17995

BUOYANCY
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333

BURNS (INJURIES)
Microcirculatory changes in rats with burn shock following adaptation to high-altitude hypoxia p 81 A86-22547

C

CALCIFEROL
Regulation of bone mineral loss during lactation p 82 A86-22713

CALCIUM METABOLISM
Calcium antagonists in the prevention of motion sickness p 87 A86-20405
Regulation of bone mineral loss during lactation p 82 A86-22713

CARBOHYDRATES
Determining a carbohydrate profile for Hansenula polymorpha p 82 A86-22710

CARBON 12
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam p 84 N86-16886

CARCINOGENS
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay [AD-A156772] p 93 N86-17981

CARDIAC VENTRICLES
Heat acclimation - Cardiac performance of isolated rat heart p 82 A86-22663

CARDIOLOGY
The effects of +Gz on the coronary circulation - A review p 86 A86-20401
Laser ablation of human atherosclerotic plaque without adjacent tissue injury p 91 A86-22711

CARDIOVASCULAR SYSTEM
Effects of detraining on cardiovascular responses to exercise - Role of blood volume p 91 A86-22665

CATALYSIS
Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

CELLS (BIOLOGY)
The electrokinetic properties of cell nuclei in the human buccal epithelium in conditions of motion sickness and hypoxia p 90 A86-22549
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709
Physico-chemical studies of radiation effects in cells [DE85-014681] p 83 N86-16878
Models for biomedical research: A new perspective [PB85-240067] p 83 N86-16880
Advances in nerve cell research p 91 N86-16882
Dynamics of peroxide oxidation of lipids during stress p 83 N86-16883
Improved monoclonal antibodies to halodeoxyuridine [DE85-017764] p 92 N86-16891
Clonal analysis of HLA-DR and -dQ associated determinants: Their contribution to dw specificities [AD-A160059] p 84 N86-17977

CENTRAL NERVOUS SYSTEM
Peptides and memory p 95 N86-16884

CHARGED PARTICLES
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam p 84 N86-16886

CHEMICAL ANALYSIS
Determining a carbohydrate profile for Hansenula polymorpha p 82 A86-22710
Protein mapping and the problem of complexity in molecular biology [DE85-018349] p 85 N86-17979

CHEMICAL WARFARE
Canadian developments in aircrew chemical defence protection p 97 A86-19342

CHROMOSOMES
HLA-D: The T cell perspective [AD-A160019] p 84 N86-17976

CIRCADIAN RHYTHMS
Disturbance of the multiperiodic synchronization of the heart-beat and respiratory rhythms after transmeridian flights through three time zones p 88 A86-22533
The elusive mechanism of the circadian clock p 82 A86-22650
Cardiorenal-endocrine responses to head-out immersion at night p 91 A86-22666
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890

CIRCULAR POLARIZATION
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity [AD-A159806] p 84 N86-17975

CLEANERS
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower [NASA-CR-171910] p 99 N86-16903

CLINICAL MEDICINE
Cerebral thrombosis at altitude - Its pathogenesis and the problems of prevention and treatment p 87 A86-20410
COAL LIQUEFACTION
Health and Environmental Effects of Complex Chemical Mixtures
[DE85-016336] p 92 N86-16892
COCKPITS
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996
COGNITION
Application of component scoring to a complicated cognitive domain
[AD-A157897] p 95 N86-16898
Bug distribution and pattern classification
[AD-A157898] p 95 N86-16899
COGNITIVE PSYCHOLOGY
Effects of raised body temperature on reasoning, memory, and mood p 86 A86-20002
COLD ACCLIMATIZATION
Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544
COLD TOLERANCE
Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544
COLD WATER
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348
COLOR
Color on displays. Part 1: The psychophysical and physiological aspects
[IZF-1985-11] p 100 N86-17994
COMFORT
A waterproof vent valve for immersion suits
[REPT-515] p 99 N86-17988
Heat transfer in impermeable clothing: Sweat plays a role after all
[IZF-1985-9] p 100 N86-17992
COMPRESSED AIR
Performance comparison of thirty, two-stage demand regulators — underwater breathing apparatus
[ARE(M6)-TM-83818] p 99 N86-17987
COMPRESSION LOADS
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594
COMPUTER AIDED DESIGN
A Computer Aided Design (CAD) system as a tool for the ergonomist in developing man-machine systems
[IZF-1985-10] p 100 N86-17993
COMPUTER ASSISTED INSTRUCTION
Proceedings of the Air Force Conference on Technology in Training and Education (TITE)
[AD-A157829] p 95 N86-16897
COMPUTER SYSTEMS DESIGN
Operator environment in the nineties
[FOA-A-50002-H2] p 99 N86-16905
COMPUTER SYSTEMS PERFORMANCE
A Computer Aided Design (CAD) system as a tool for the ergonomist in developing man-machine systems
[IZF-1985-10] p 100 N86-17993
COMPUTERIZED SIMULATION
Operations research techniques for human factors engineers
[AD-A159384] p 99 N86-16904
A Computer Aided Design (CAD) system as a tool for the ergonomist in developing man-machine systems
[IZF-1985-10] p 100 N86-17993
CONFERENCES
Health and Environmental Effects of Complex Chemical Mixtures
[DE85-016336] p 92 N86-16892
COPPER COMPOUNDS
The evaluation of copper compounds as potential fuel biocides
[AMTE(M)-84520] p 84 N86-17974
CORONARY ARTERY DISEASE
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594
CORONARY CIRCULATION
The effects of +Gz on the coronary circulation - A review p 86 A86-20401
CRYSTAL GROWTH
Protein crystal growth results from shuttle flight 51-F
[NASA-CR-178540] p 82 N86-16875
CRYSTALS
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893
CULTURE TECHNIQUES
HLA-D: The T cell perspective
[AD-A160019] p 84 N86-17976
CYTOLOGY
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709

Simulator sickness - Incidence of simulator aftereffects in Navy flight trainers p 85 A86-19346
FLOW REGULATORS
Performance comparison of thirty, two-stage demand regulators — underwater breathing apparatus [ARE(M6)-TM-83818] p 99 N86-17987
FLYING PERSONNEL
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568
FOOD INTAKE
Effect of immobilization stress on body weight in rats p 81 A86-22324
FOOD PRODUCTION (IN SPACE)
Determining a carbohydrate profile for Hansenula polymorpha p 82 A86-22710
FUEL CONTAMINATION
The evaluation of copper compounds as potential fuel biocides [AMTE(M)-84520] p 84 N86-17974
FUNGICIDES
The evaluation of copper compounds as potential fuel biocides [AMTE(M)-84520] p 84 N86-17974

G

GAS TRANSPORT
Mechanical resistance of erythrocytes and oxygen mass transport in hypoxic states due to different conditions p 88 A86-21452
The effect of prolonged physical work at the levels of submaximal and extreme intensity upon the mass transfer and utilization of oxygen p 89 A86-22536
Calculation method for determining energy expenditures for operators p 90 A86-22567
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593
GASES
Transport of arterial blood gates through human skin p 91 N86-16887
GENETIC ENGINEERING
HLA-D: The T cell perspective [AD-A160019] p 84 N86-17976
Clonal analysis of HLA-DR and -dQ associated determinants: Their contribution to dw specificities [AD-A160059] p 84 N86-17977
GENETICS
An intron in the 23S ribosomal RNA gene of the archaebacterium Desulfurococcus mobilis p 80 A86-21588
HLA-D: The T cell perspective [AD-A160019] p 84 N86-17976
Clonal analysis of HLA-DR and -dQ associated determinants: Their contribution to dw specificities [AD-A160059] p 84 N86-17977
GEOMAGNETISM
The dependence of thromboelastographic indices in healthy subjects on geomagnetic-field conditions p 90 A86-22545
GLYCOGENS
Determining a carbohydrate profile for Hansenula polymorpha p 82 A86-22710
GLYCOLYSIS
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia p 80 A86-21455
GRAVITATIONAL PHYSIOLOGY
The effects of +Gz on the coronary circulation - A review p 86 A86-20401

H

HAMSTERS
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005
HAND (ANATOMY)
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348
HEART
Heat acclimation - Cardiac performance of isolated rat heart p 82 A86-22663
HEART DISEASES
A comparison of postmortem coronary atherosclerosis findings in general aviation pilot fatalities [AD-A159811] p 93 N86-17982
HEART FUNCTION
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525
HEART RATE
Disturbance of the multiperiodic synchronization of the heart-beat and respiratory rhythms after transmeridian flights through three time zones p 86 A86-22533
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535
Calculation method for determining energy expenditures for operators p 90 A86-22567
HEAT ACCLIMATIZATION
Experimental validation of training regime and a monitoring method connected with accelerated adaptation to heat p 86 A86-22524
Heat adaptation during training by graded hyperthermia p 89 A86-22538
Thermoregulation in man under thermal stress p 89 A86-22541
Hematological criteria of the heat adaptation of seamen p 90 A86-22569
Heat acclimation - Cardiac performance of isolated rat heart p 82 A86-22663
HEAT EXCHANGERS
Development of an improved liquid cooling system — in protective clothing p 97 A86-19341
HEAT TOLERANCE
Plasma hormonal responses at graded hypohydration levels during exercise-heat stress p 86 A86-20004
Heat transfer in impermeable clothing: Sweat plays a role after all [IZF-1985-9] p 100 N86-17992
HEAT TRANSFER
Heat transfer in impermeable clothing: Sweat plays a role after all [IZF-1985-9] p 100 N86-17992
HELICOPTERS
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310
HELMETS
Laboratory and flight testing of ballistic protective headgear for rotary wing aircrew p 97 A86-19344
HEMATOLOGY
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540
Hematological criteria of the heat adaptation of seamen p 90 A86-22569
HEMATOPOIESIS
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404
HEMODYNAMIC RESPONSES
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure p 90 A86-22542
Effects of detraining on cardiovascular responses to exercise - Role of blood volume p 91 A86-22665
HEMOGLOBIN
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity [AD-A159806] p 84 N86-17975
HEMOSTATICS
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454
HIGH PRESSURE OXYGEN
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525
HISTOCHEMICAL ANALYSIS
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540
HORMONE METABOLISMS
Plasma hormonal responses at graded hypohydration levels during exercise-heat stress p 86 A86-20004
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions p 84 N86-16885
HUMAN BEINGS
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters [DE85-017601] p 93 N86-16893
Assessment of individual human exposures to ozone in a health study [PB85-245975] p 94 N86-17984
HUMAN CENTRIFUGES
Evaluation of pilot performance and aircrew protective devices in a simulated F-14 flat spin environment p 86 A86-19351

HUMAN FACTORS ENGINEERING
Development of a zero-prebreathe spacesuit p 96 A86-19304
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310
Human error in life support operations p 96 A86-19330
Canadian developments in aircrew chemical defence protection p 97 A86-19342
Underlying behavioral parameters of the operation of tough-input devices - Biases, models, and feedback p 98 A86-20110
Model evalution of spinal injury likelihood for various ejection system paramater variations p 91 N86-16641
Operations research techniques for human factors engineers
[AD-A159384] p 99 N86-16904
Operator environment in the nineties
[FOA-A-50002-H2] p 99 N86-16905
Human-machine interfaces for teleoperators: An overview of research and development at the Oak Ridge National Laboratory. Consolidated Fuel Reprocessing Program
[DE85-017713] p 100 N86-17990
A Computer Aided Design (CAD) system as a tool for the ergonomist in developing man-machine systems
[IZF-1985-10] p 100 N86-17993
Color on displays. Part 1: The psychophysical and physiological aspects
[IZF-1985-11] p 100 N86-17994
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996

HUMAN PERFORMANCE
Variations in state of vigilance during continuous operations at a command post
[DRIC-T-7503] p 95 N86-16900
Photosimulation of target acquisition in the presence of smoke: A pilot study
[IZF-1984-36] p 95 N86-17986

HUMAN REACTIONS
Thermoregulation in man under thermal stress p 89 A86-22541

HYDROCARBON POISONING
USAF toxicology research on petroleum and shale-derived aviation gas turbine fuels
[ASME PAPER 85-GT-34] p 80 A86-22023

HYDROCARBONS
Health and Environmental Effects of Complex Chemical Mixtures
[DE85-016336] p 92 N86-16892

HYDROGEN PRODUCTION
Method for improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system
[DE85-017723] p 85 N86-17978

HYGIENE
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower
[NASA-CR-171910] p 99 N86-16903

HYPERCAPNIA
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005

HYPERTENSION
The risk of arterial hypertension and the features of functional brain asymmetry in workers employed in regularly repeated expedition-type work p 88 A86-22534

HYPERTHERMIA
The effect of skill on performance under an environmental stressor p 94 A86-20408
Heat adaptation during training by graded hyperthermia p 89 A86-22538

HYPOBARIC ATMOSPHERES
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454

HYPODYNAMIA
The effect of a weak variable ultralow-frequency magnetic field on the development of hypercoagulation syndrome in rats caused by restricted mobility p 79 A86-19300
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404

HYPOKINESIA
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions p 84 N86-16885

HYPOTHERMIA
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348
Comparative cold responses of men and women to external and internal cold stimuli p 87 A86-20403
Defense strategies against hypoxia and hypothermia p 81 A86-22258

HYPOVOLEMIA
The effect of enkephalins on metabolic parameters of rats in the presence of acute experimental blood loss p 81 A86-22546

HYPOXIA
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005
Changes in immunoreactivity during adaptation to intervals of hypoxic hypoxia p 80 A86-21451
Mechanical resistance of erythrocytes and oxygen mass transport in hypoxic states due to different conditions p 88 A86-21452
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia p 80 A86-21455
Defense strategies against hypoxia and hypothermia p 81 A86-22258
Microcirculatory changes in rats with burn shock following adaptation to high-altitude hypoxia p 81 A86-22547
Increased resistance of the brain to hypoxia due to a combination of lithium hydroxybutyrate and indomethacine p 81 A86-22548
The electrokinetic properties of cell nuclei in the human buccal epithelium in conditions of motion sickness and hypoxia p 90 A86-22549
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595

I

ILLUMINATING
Age, degraded viewing environments, and the speed of accommodation p 87 A86-20407
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996

IMAGE INTENSIFIERS
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996

IMAGE PROCESSING
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893

IMMOBILIZATION
Effect of immobilization stress on body weight in rats p 81 A86-22324

IMMUNOASSAY
Improved monoclonal antibodies to halodeoxyuridine
[DE85-017764] p 92 N86-16891

IMMUNOLOGY
Changes in immunoreactivity during adaptation to intervals of hypoxic hypoxia p 80 A86-21451

IMPEDANCE MEASUREMENT
The use of thoracic impedance for determining thoracic blood volume changes in man p 87 A86-20406

INDUSTRIAL SAFETY
Report of the symposium on biological monitoring of exposure to metals and other inorganic compounds
[MBL-1985-6] p 85 N86-17980

INORGANIC COMPOUNDS
Report of the symposium on biological monitoring of exposure to metals and other inorganic compounds
[MBL-1985-6] p 85 N86-17980

INPUT/OUTPUT ROUTINES
Underlying behavioral parameters of the operation of tough-input devices - Biases, models, and feedback p 98 A86-20110

INSTRUCTORS
Naval Training Command mishaps and instructor experience p 94 A86-20409

INTERFACES
Human-machine interfaces for teleoperators: An overview of research and development at the Oak Ridge National Laboratory. Consolidated Fuel Reprocessing Program
[DE85-017713] p 100 N86-17990

INVERTEBRATES
Models for biomedical research: A new perspective
[PB85-240067] p 83 N86-16880

IRRADIATION
Biological effects of millimeter waves on the mouse
[FOA-C-50023-H1] p 83 N86-16879

J

JET LAG
Disturbance of the multiperiodic synchronization of the heart-beat and respiratory rhythms after transmeridian flights through three time zones p 88 A86-22533
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature
[NASA-TM-88197] p 92 N86-16890

JUPITER SATELLITES
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644

L

LABORATORY EQUIPMENT
A system of rat restraint using a cone-shaped, plexiglass and stainless steel rod cage
[AD-A158428] p 83 N86-16876

LACTIC ACID
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595

LASER APPLICATIONS
Laser ablation of human atherosclerotic plaque without adjacent tissue injury p 91 A86-22711

LEAKAGE
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333

LEARNING
Models for biomedical research: A new perspective
[PB85-240067] p 83 N86-16880
Application of component scoring to a complicated cognitive domain
[AD-A157897] p 95 N86-16898
Bug distribution and pattern classification
[AD-A157898] p 95 N86-16899

LEUKOCYTES
HLA-D: The T cell perspective
[AD-A160019] p 84 N86-17976

LICENSING
Instructions for flight crew members and flight crew training and examination guidelines of the West German Federal Board of Transport
[REPT-1] p 95 N86-17985

LIFE SCIENCES
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-025] p 83 N86-16881

LIFE SUPPORT SYSTEMS
U.S. Navy ALSS corporate report 1984 p 96 A86-19309
Molecular sieve oxygen systems and aircraft role p 96 A86-19315
Human error in life support operations p 96 A86-19330
Pilot underwater high pressure emergency breathing system p 97 A86-19343
An expert systems approach to automated fault management in a regenerative life support subsystem
[AIAA PAPER 86-0321] p 98 A86-19811
Controlled ecological life support systems for space habitats p 96 A86-22325

LIMBS (ANATOMY)
Limb Restraint Evaluator (LRE) p 96 A86-19329

LIPID METABOLISM
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568

LIPIDS
Archaebacterial lipids in hot-spring microbial mats p 80 A86-21587
Dynamics of peroxide oxidation of lipids during stress p 83 N86-16883

LIQUID COOLING
Development of an improved liquid cooling system --- in protective clothing p 97 A86-19341

LOCOMOTION
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709

LUNGS
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay
[AD-A156772] p 93 N86-17987

LYMPHOCYTES
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540

Clonal analysis of HLA-DR and -dQ associated determinants: Their contribution to dw specificities
[AD-A160059] p 84 N86-17977

LYSOZYME
Protein crystal growth results from shuttle flight 51-F
[NASA-CR-178540] p 82 N86-16875

M

MAGNETIC EFFECTS
The effect of a weak variable ultralow-frequency magnetic field on the development of hypercoagulation syndrome in rats caused by restricted mobility
p 79 A86-19300
The dependence of thromboelastographic indices in healthy subjects on geomagnetic-field conditions
p 90 A86-22545

MAGNETIC FIELDS
Biological effects of electric fields
[PB85-243467] p 93 N86-16895

MAGNETIC FLUX
The effect of a weak variable ultralow-frequency magnetic field on the development of hypercoagulation syndrome in rats caused by restricted mobility
p 79 A86-19300

MAGNETIC RESONANCE
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity
[AD-A159806] p 84 N86-17975

MAN MACHINE SYSTEMS
Molecular sieve oxygen systems and aircraft role
p 96 A86-19315
Human error in life support operations
p 96 A86-19330
Human-machine interfaces for teleoperators: An overview of research and development at the Oak Ridge National Laboratory. Consolidated Fuel Reprocessing Program
[DE85-017713] p 100 N86-17990
A Computer Aided Design (CAD) system as a tool for the ergonomist in developing man-machine systems
[IZF-1985-10] p 100 N86-17993

MANIPULATORS
Advanced servomanipulator development
[DE85-017720] p 100 N86-17989

MANNED MANEUVERING UNITS
Orbital flight test of the manned maneuvering unit
p 95 A86-21068

MAPPING
Protein mapping and the problem of complexity in molecular biology
[DE85-018349] p 85 N86-17979

MASKS
Protective respirator for the AAH-64 Advanced Attack Helicopter p 97 A86-19336

MASS TRANSFER
The effect of prolonged physical work at the levels of submaximal and extreme intensity upon the mass transfer and utilization of oxygen p 89 A86-22536

MATHEMATICAL MODELS
Bug distribution and pattern classification
[AD-A157898] p 95 N86-16899
Operations research techniques for human factors engineers
[AD-A159384] p 99 N86-16904

MEMBRANES
Defense strategies against hypoxia and hypothermia
p 81 A86-22258
Dynamics of peroxide oxidation of lipids during stress
p 83 N86-16883

MEMORY
Peptides and memory p 95 N86-16884

MENTAL HEALTH
The elusive mechanism of the circadian clock
p 82 A86-22650

MENTAL PERFORMANCE
The effect of skill on performance under an environmental stressor p 94 A86-20408
Variations in state of vigilance during continuous operations at a command post
[DRIC-T-7503] p 95 N86-16900
Effect of time span and task load on pilot mental workload
[NASA-CR-177388] p 99 N86-16901

MERCURY (METAL)
Physico-chemical studies of radiation effects in cells
[DE85-014681] p 83 N86-16878

METABOLISM
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia
p 80 A86-21455
Defense strategies against hypoxia and hypothermia
p 81 A86-22258
Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544
The effect of enkephalins on metabolic parameters of rats in the presence of acute experimental blood loss
p 81 A86-22546
Animal studies on Spacelab-3
[NASA-TM-86212] p 92 N86-16889

METALS
Report of the symposium on biological monitoring of exposure to metals and other inorganic compounds
[MBL-1985-6] p 85 N86-17980

METHODOLOGY
Method for improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system
[DE85-017723] p 85 N86-17978

MICE
Biological effects of millimeter waves on the mouse
[FOA-C-50023-H1] p 83 N86-16879
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay
[AD-A156772] p 93 N86-17981

MICROORGANISMS
Archaebacterial lipids in hot-spring microbial mats
p 80 A86-21587
Models for biomedical research: A new perspective
[PB85-240067] p 83 N86-16880

MICROPHONES
A new application of adaptive noise cancellation — in acoustic barriers p 99 A86-22626

MILITARY AIRCRAFT
U.S. Navy ALSS corporate report 1984
p 96 A86-19309

MILITARY HELICOPTERS
Laboratory and flight testing of ballistic protective headgear for rotary wing aircrew p 97 A86-19344
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996

MILITARY TECHNOLOGY
Operations research techniques for human factors engineers
[AD-A159384] p 99 N86-16904

MILLIMETER WAVES
Biological effects of millimeter waves on the mouse
[FOA-C-50023-H1] p 83 N86-16879

MITOCHONDRIA
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions
p 84 N86-16885

MOLECULAR BIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-025] p 83 N86-16881
Protein mapping and the problem of complexity in molecular biology
[DE85-018349] p 85 N86-17979

MOLECULAR EXCITATION
Advances in nerve cell research p 91 N86-16882

MOLECULAR STRUCTURE
Advances in nerve cell research p 91 N86-16882

MONITORS
Transport of arterial blood gates through human skin
p 91 N86-16887

MOTION AFTEREFFECTS
Invariant tuning of motion aftereffect
p 94 A86-20899

MOTION SICKNESS
Simulator sickness - Incidence of simulator aftereffects in Navy flight trainers p 85 A86-19346
The electrokinetic properties of cell nuclei in the human buccal epithelium in conditions of motion sickness and hypoxia p 90 A86-22549

MOTION SICKNESS DRUGS
Calcium antagonists in the prevention of motion sickness p 87 A86-20405

MOUTH
The electrokinetic properties of cell nuclei in the human buccal epithelium in conditions of motion sickness and hypoxia p 90 A86-22549

MUSCULAR FUNCTION
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594

MUSCULAR STRENGTH
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348

MUSCULOSKELETAL SYSTEM
Animal studies on Spacelab-3
[NASA-TM-86212] p 92 N86-16889

MYOCARDIUM
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia
p 80 A86-21455

N

NAVY
Naval Training Command mishaps and instructor experience p 94 A86-20409

NEOPLASMS
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay
[AD-A156772] p 93 N86-17981

NERVOUS SYSTEM
Advances in nerve cell research p 91 N86-16882

NEUROPHYSIOLOGY
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539
Animal studies on Spacelab-3
[NASA-TM-86212] p 92 N86-16889

NIGHT VISION
Helicopter cockpit organization for night vision
[SNIAS-852-210-103] p 101 N86-17996

NITRO COMPOUNDS
Health and Environmental Effects of Complex Chemical Mixtures
[DE85-016336] p 92 N86-16892

NOISE REDUCTION
A new application of adaptive noise cancellation — in acoustic barriers p 99 A86-22626

NUCLEAR MEDICINE
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam
p 84 N86-16886

NUMERICAL ANALYSIS
Calculation method for determining energy expenditures for operators p 90 A86-22567

NUTRITIONAL REQUIREMENTS
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404

O

OPERATIONS RESEARCH
Operations research techniques for human factors engineers
[AD-A159384] p 99 N86-16904

OPERATOR PERFORMANCE
The diaphoretic reflex in a complex of methods for estimating operator efficiency p 88 A86-21453
Individual and typological functional properties of the sympathoadrenal system as a prognostic index of the functional state of an organism in complex environmental conditions p 88 A86-22532
The risk of arterial hypertension and the features of functional brain asymmetry in workers employed in regularly repeated expedition-type work
p 88 A86-22534
Calculation method for determining energy expenditures for operators p 90 A86-22567
Hematological criteria of the heat adaptation of seamen p 90 A86-22569

OPERATORS (PERSONNEL)
Operator environment in the nineties
[FOA-A-50002-H2] p 99 N86-16905

OPHTHALMOLOGY
Characterization of YAG lasers for ophthalmologic applications
[SNIAS-852-430-107] p 93 N86-16894

ORBITAL ASSEMBLY
Robotics and the space station p 98 A86-20507

ORBITAL SERVICING
Robotics and the space station p 98 A86-20507

ORTHOSTATIC TOLERANCE
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404

OXIDATION-REDUCTION REACTIONS
Dynamics of peroxide oxidation of lipids during stress
p 83 N86-16883

OXYGEN
Transport of arterial blood gates through human skin
p 91 N86-16887

OXYGEN BREATHING
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525

OXYGEN CONSUMPTION
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402
Mechanical resistance of erythrocytes and oxygen mass transport in hypoxic states due to different conditions p 88 A86-21452
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia p 80 A86-21455
The effect of prolonged physical work at the levels of submaximal and extreme intensity upon the mass transfer and utilization of oxygen p 89 A86-22536
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593

OXYGEN METABOLISM
Non-invasive physiologic brain monitoring in USAF operational environments p 85 A86-19332

OXYGEN SUPPLY EQUIPMENT
Molecular sieve oxygen systems and aircraft role p 96 A86-19315

OZONE
Ambient ozone and human health: An epidemiological analysis, volume 1 [PB85-245181] p 93 N86-16896
Assessment of individual human exposures to ozone in a health study [PB85-245975] p 94 N86-17984

P

PARTICLE ACCELERATORS
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam p 84 N86-16886

PATHOGENESIS
Cerebral thrombosis at altitude - Its pathogenesis and the problems of prevention and treatment p 87 A86-20410
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568

PATHOLOGICAL EFFECTS
USAF toxicology research on petroleum and shale-derived aviation gas turbine fuels [ASME PAPER 85-GT-34] p 80 A86-22023

PEPTIDES
Peptides and memory p 95 N86-16884

PERCEPTUAL ERRORS
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539

PERFORMANCE TESTS
Instructions for flight crew members and flight crew training and examination guidelines of the West German Federal Board of Transport [REPT-1] p 95 N86-17985
Performance comparison of thirty, two-stage demand regulators — underwater breathing apparatus [ARE(M6)-TM-83818] p 99 N86-17987

PERIODIC VARIATIONS
Changes in immunoreactivity during adaptation to intervals of hypoxic hypoxia p 80 A86-21451

PEROXIDES
Dynamics of peroxide oxidation of lipids during stress p 83 N86-16883

PETROLEUM PRODUCTS
USAF toxicology research on petroleum and shale-derived aviation gas turbine fuels [ASME PAPER 85-GT-34] p 80 A86-22023

PH
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709

PHARMACOLOGY
Calcium antagonists in the prevention of motion sickness p 87 A86-20405
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

PHOSPHORUS METABOLISM
Regulation of bone mineral loss during lactation p 82 A86-22713

PHOTOGRAPHS
Photosimulation of target acquisition in the presence of smoke: A pilot study [IZF-1984-36] p 95 N86-17986

PHOTOSYNTHESIS
Method for improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system [DE85-017723] p 85 N86-17978

PHYSICAL CHEMISTRY
Physico-chemical studies of radiation effects in cells [DE85-014681] p 83 N86-16878

PHYSICAL EXERCISE
Plasma hormonal responses at graded hypohydration levels during exercise-heat stress p 86 A86-20004
Heat adaptation during training by graded hyperthermia p 89 A86-22538
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540

PHYSICAL WORK
The effect of prolonged physical work at the levels of submaximal and extreme intensity upon the mass transfer and utilization of oxygen p 89 A86-22536
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537

PHYSIOLOGICAL ACCELERATION
The effects of +Gz on the coronary circulation - A review p 86 A86-20401

PHYSIOLOGICAL DEFENSES
Defense strategies against hypoxia and hypothermia p 81 A86-22258

PHYSIOLOGICAL EFFECTS
An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097
Effect of immobilization stress on body weight in rats p 81 A86-22324
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535
The effect of prolonged physical work at the levels of submaximal and extreme intensity upon the mass transfer and utilization of oxygen p 89 A86-22536
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595
Assessment of individual human exposures to ozone in a health study [PB85-245975] p 94 N86-17984

PHYSIOLOGICAL FACTORS
Human error in life support operations p 96 A86-19330

PHYSIOLOGICAL RESPONSES
Comparative cold responses of men and women to external and internal cold stimuli p 87 A86-20403
Changes in immunoreactivity during adaptation to intervals of hypoxic hypoxia p 80 A86-21451
The diaphoretic reflex in a complex of methods for estimating operator efficiency p 88 A86-21453
Changes in the hemostatis system of the animal organism due to granulocytopoiesis inhibition under reduced barometric pressure p 80 A86-21454
The distinctive features of the energetic metabolism, glycolysis, and tissue respiration of the myocardium in rats having high and low resistance to hypoxia p 80 A86-21455
Individual and typological functional properties of the sympathoadrenal system as a prognostic index of the functional state of an organism in complex environmental conditions p 88 A86-22532
The effect of enkephalins on metabolic parameters of rats in the presence of acute experimental blood loss p 81 A86-22546
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594
Heat acclimation - Cardiac performance of isolated rat heart p 82 A86-22663
Cardiorenal-endocrine responses to head-out immersion at night p 91 A86-22666
Peptides and memory p 95 N86-16884
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions p 84 N86-16885

PHYSIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

PILOT ERROR
Naval Training Command mishaps and instructor experience p 94 A86-20409

PILOT PERFORMANCE
Evaluation of pilot performance and aircrew protective devices in a simulated F-14 flat spin environment p 86 A86-19351
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525
Effect of time span and task load on pilot mental workload [NASA-CR-177388] p 99 N86-16901
The biomorphic model of the human pilot [VTH-LR-310] p 100 N86-17991

PILOT SELECTION
Task parameters affecting individual differences in pursuit and compensatory tracking performance p 95 A86-20972

PILOT TRAINING
Naval Training Command mishaps and instructor experience p 94 A86-20409

PILOTS (PERSONNEL)
A comparison of postmortem coronary atherosclerosis findings in general aviation pilot fatalities [AD-A159811] p 93 N86-17982

PLANETARY EVOLUTION
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644

PLANTS (BOTANY)
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam p 84 N86-16886

PORPHYRINS
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity [AD-A159806] p 84 N86-17975
Method for improving product yields in an anionic metalloporphyrin-based artificial photosynthesis system [DE85-017723] p 85 N86-17978

POSTMISSION ANALYSIS (SPACECRAFT)
Ames Research Center Life Sciences Payload - Overview of results of a spaceflight of 24 rats and 2 monkeys [AIAA PAPER 86-0583] p 79 A86-19963

POTABLE WATER
Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

PREGNANCY
Regulation of bone mineral loss during lactation p 82 A86-22713

PRESSURE REGULATORS
A waterproof vent valve for immersion suits [REPT-515] p 99 N86-17988

PRESSURE SUITS
Decompression sickness and intravenous bubble formation using a 7.8 psi simulated pressure-suit environment p 85 A86-19347

PROTECTIVE CLOTHING
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310
Protective respirator for the AAH-64 Advanced Attack Helicopter p 97 A86-19336
Development of an improved liquid cooling system — in protective clothing p 97 A86-19341
Laboratory and flight testing of ballistic protective headgear for rotary wing aircrew p 97 A86-19344
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348

PROTEINS
Protein crystal growth results from shuttle flight 51-F [NASA-CR-178540] p 82 N86-16875
Protein mapping and the problem of complexity in molecular biology [DE85-018349] p 85 N86-17979

PROTOTYPES
An expert systems approach to automated fault management in a regenerative life support subsystem [AIAA PAPER 86-0321] p 98 A86-19811

PSEUDOMONAS
Physico-chemical studies of radiation effects in cells [DE85-014681] p 83 N86-16878

PSYCHIATRY
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-85-025] p 83 N86-16881

PSYCHOLOGICAL EFFECTS
Effects of raised body temperature on reasoning, memory, and mood p 86 A86-20002
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890

Psychological problems associated with the wearing of respiratory protective devices: A review
[FOA-C-40216-C2] p 101 N86-17995
PSYCHOLOGICAL FACTORS
Human error in life support operations
p 96 A86-19330
Psychological problems associated with the wearing of respiratory protective devices: A review
[FOA-C-40216-C2] p 101 N86-17995
PSYCHOMOTOR PERFORMANCE
The effect of skill on performance under an environmental stressor p 94 A86-20408
Task parameters affecting individual differences in pursuit and compensatory tracking performance
p 95 A86-20972
PSYCHOPHYSICS
Invariant tuning of motion aftereffect
p 94 A86-20699
PSYCHOPHYSIOLOGY
The diaphoretic reflex in a complex of methods for estimating operator efficiency p 96 A86-21453
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539
Color on displays. Part 1: The psychophysical and physiological aspects
[IZF-1985-11] p 100 N86-17994
PUBLIC HEALTH
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-025] p 83 N86-16881
Ambient ozone and human health: An epidemiological analysis, volume 1
[PB85-245181] p 93 N86-16896
PULMONARY CIRCULATION
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure
p 90 A86-22542
PURSUIT TRACKING
Task parameters affecting individual differences in pursuit and compensatory tracking performance
p 95 A86-20972

R

RADIATION DOSAGE
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam
p 84 N86-16886
RADIATION EFFECTS
Physico-chemical studies of radiation effects in cells
[DE85-014681] p 83 N86-16878
Biological effects of millimeter waves on the mouse
[FOA-C-50023-H1] p 83 N86-16879
RADIATION MEASURING INSTRUMENTS
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893
RADIATION TOLERANCE
Physico-chemical studies of radiation effects in cells
[DE85-014681] p 83 N86-16878
RADIOACTIVE ISOTOPES
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893
RADIOBIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-85-025] p 83 N86-16881
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893
RADIOGRAPHY
In vivo detection, localization and measurement of radionuclides in man: a detection system for the localization and measurement of small amounts of photon emitters
[DE85-017601] p 93 N86-16893
RED GIANT STARS
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644
REDUCED GRAVITY
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower
[NASA-CR-171910] p 99 N86-16903
REGENERATION (ENGINEERING)
An expert systems approach to automated fault management in a regenerative life support subsystem
[AIAA PAPER 86-0321] p 98 A86-19811
Controlled ecological life support systems for space habitats p 98 A86-22325
REGULATIONS
Instructions for flight crew members and flight crew training and examination guidelines of the West German Federal Board of Transport
[REPT-1] p 95 N86-17985
REMOTE CONTROL
Advanced servomanipulator development
[DE85-017720] p 100 N86-17989
RENAL FUNCTION
Cardiorenal-endocrine responses to head-out immersion at night p 91 A86-22666
RESPIRATION
Biological effects of millimeter waves on the mouse
[FOA-C-50023-H1] p 83 N86-16879
RESPIRATORS
Protective respirator for the AAH-64 Advanced Attack Helicopter p 97 A86-19336
Expedient methods of respiratory protection. 3: Submicron particle tests and summary of quality factors
[TI85-018278] p 94 N86-17963
RESPIRATORY DISEASES
Expedient methods of respiratory protection. 3: Submicron particle tests and summary of quality factors
[TI85-018278] p 94 N86-17963
RESPIRATORY PHYSIOLOGY
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402
RESPIRATORY RATE
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005
Disturbance of the multiperiodic synchronization of the heart-beat and respiratory rhythms after transmeridian flights through three time zones p 88 A86-22533
RESPIRATORY SYSTEM
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003
RESPONSE BIAS
Underlying behavioral parameters of the operation of tough-input devices - Biases, models, and feedback
p 98 A86-20110
RETAINING
Limb Restraint Evaluator (LRE) p 96 A86-19329
RETINAL IMAGES
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539
RHYTHM (BIOLOGY)
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature
[NASA-TM-88197] p 92 N86-16890
RIBONUCLEIC ACIDS
An intron in the 23S ribosomal RNA gene of the archaebacterium Desulfurococcus mobilis
p 80 A86-21588
ROBOTICS
Robotics and the space station p 98 A86-20507
ROBOTS
Robotics and the space station p 98 A86-20507
RODS
A system of rat restraint using a cone-shaped, plexiglass and stainless steel rod cage
[AD-A158428] p 83 N86-16876
ROTARY WING AIRCRAFT
Laboratory and flight testing of ballistic protective headgear for rotary wing aircrew p 97 A86-19344
RUNNING
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students
p 89 A86-22537

S

SAFETY DEVICES
Psychological problems associated with the wearing of respiratory protective devices: A review
[FOA-C-40216-C2] p 101 N86-17995
SANITATION
Report of the symposium on biological monitoring of exposure to metals and other inorganic compounds
[MBL-1985-6] p 85 N86-17980
SCORING
Application of component scoring to a complicated cognitive domain
[AD-A157897] p 95 N86-16898
SEA URCHINS
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709
SEDIMENTS
Archaebacterial lipids in hot-spring microbial mats
p 80 A86-21587
SEEDS
Cytogenetic changes in cells of lettuce seedlings with exposure to accelerated carbon ion beam
p 84 N86-16886
SENSORIMOTOR PERFORMANCE
The risk of arterial hypertension and the features of functional brain asymmetry in workers employed in regularly repeated expedition-type work
p 88 A86-22534
SERVOMECHANISMS
Advanced servomanipulator development
[DE85-017720] p 100 N86-17989
SEX FACTOR
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402
Comparative cold responses of men and women to external and internal cold stimuli p 87 A86-20403
SHALE OIL
USAF toxicology research on petroleum and shale-derived aviation gas turbine fuels
[ASME PAPER 85-GT-34] p 80 A86-22023
SHOCK (PHYSIOLOGY)
Microcirculatory changes in rats with burn shock following adaptation to high-altitude hypoxia
p 81 A86-22547
SHOCK WAVES
Characterization of YAG lasers for ophthalmologic applications
[SNIAS-852-430-107] p 93 N86-16894
SIEVES
Molecular sieve oxygen systems and aircraft role
p 96 A86-19315
SIGNAL TO NOISE RATIOS
A new application of adaptive noise cancellation --- in acoustic barriers p 99 A86-22626
SIZE DETERMINATION
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539
SKIN (ANATOMY)
Transport of arterial blood gases through human skin
p 91 N86-16887
SKIN TEMPERATURE (BIOLOGY)
Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348
Comparative cold responses of men and women to external and internal cold stimuli p 87 A86-20403
SMOKE
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay
[AD-A156772] p 93 N86-17981
Photosimulation of target acquisition in the presence of smoke: A pilot study
[IZF-1984-36] p 95 N86-17986
SOLAR TERRESTRIAL INTERACTIONS
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644
SOLVENTS
Bioassay of military relevant compounds for carcinogenic activity by the strain A mouse lung tumor bioassay
[AD-A156772] p 93 N86-17981
SPACE ADAPTATION SYNDROME
Animal studies on Spacelab-3
[NASA-TM-88212] p 92 N86-16889
SPACE FLIGHT
Animal studies on Spacelab-3
[NASA-TM-88212] p 92 N86-16889
SPACE FLIGHT STRESS
An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097
SPACE HABITATS
Controlled ecological life support systems for space habitats p 98 A86-22325
SPACE MANUFACTURING
Robotics and the space station p 98 A86-20507
SPACE STATIONS
Robotics and the space station p 98 A86-20507
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower
[NASA-CR-171910] p 99 N86-16903
SPACE SUITS
Development of a zero-prebreathe spacesuit
p 96 A86-19304
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333
SPACE TRANSPORTATION SYSTEM FLIGHTS
Orbital flight test of the manned maneuvering unit
p 98 A86-21068
SPACEBORNE EXPERIMENTS
Ames Research Center Life Sciences Payload - Overview of results of a spaceflight of 24 rats and 2 monkeys
[AIAA PAPER 86-0583] p 79 A86-19963

An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097
Protein crystal growth results from shuttle flight 51-F [NASA-CR-178540] p 82 N86-16875
SPACECREWS
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower [NASA-CR-171910] p 99 N86-16903
SPACELAB
An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097
SPACELAB PAYLOADS
Ames Research Center Life Sciences Payload - Overview of results of a spaceflight of 24 rats and 2 monkeys [AIAA PAPER 86-0583] p 79 A86-19963
SPATIAL DISTRIBUTION
Characterization of YAG lasers for ophthalmologic applications [SNIAS-852-430-107] p 93 N86-16894
STAINLESS STEELS
A system of rat restraint using a cone-shaped, plexiglass and stainless steel rod cage [AD-A158428] p 83 N86-16876
STAPHYLOCOCCUS
Physico-chemical studies of radiation effects in cells [DE85-014681] p 83 N86-16878
STELLAR EVOLUTION
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644
STRESS (PHYSIOLOGY)
The effect of skill on performance under an environmental stressor p 94 A86-20408
Investigation of the functional condition of pilots in the case of oxygen breathing under excess pressure p 88 A86-22525
Individual and typological functional properties of the sympathoadrenal system as a prognostic index of the functional state of an organism in complex environmental conditions p 88 A86-22532
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535
Cytochemical studies of blood lymphocytes in the diagnosis and forecasting of changes in the functional status of athletes p 89 A86-22540
Thermoregulation in man under thermal stress p 89 A86-22541
Simultaneous determination of fluid shifts during thermal stress in a small animal model [AD-A159363] p 83 N86-16877
Dynamics of peroxide oxidation of lipids during stress p 83 N86-16883
Mitochondrial manifestations of stress and response to hormonal stimulation and hydroaeroions p 84 N86-16885
STRESS (PSYCHOLOGY)
Effect of immobilization stress on body weight in rats p 81 A86-22324
Individual and typological functional properties of the sympathoadrenal system as a prognostic index of the functional state of an organism in complex environmental conditions p 88 A86-22532
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535
SUBMERGED BODIES
Changes in the blood electric conductivity caused by body immersion p 90 A86-22543
SUN
Survival of the Jovian planets with the sun a Red Giant p 101 A86-21644
SURGERY
Laser ablation of human atherosclerotic plaque without adjacent tissue injury p 91 A86-22711
SURVIVAL EQUIPMENT
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333
SWEAT
The diaphoretic reflex in a complex of methods for estimating operator efficiency p 88 A86-21453
Heat transfer in impermeable clothing: Sweat plays a role after all [IZF-1985-9] p 100 N86-17992
SWEAT COOLING
Heat transfer in impermeable clothing: Sweat plays a role after all [IZF-1985-9] p 100 N86-17992
SWIMMING
Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544
SYMPATHETIC NERVOUS SYSTEM
Individual and typological functional properties of the sympathoadrenal system as a prognostic index of the functional state of an organism in complex environmental conditions p 88 A86-22532

T

TARGET ACQUISITION
Photosimulation of target acquisition in the presence of smoke: A pilot study [IZF-1984-36] p 95 N86-17986
TARGET MASKING
Photosimulation of target acquisition in the presence of smoke: A pilot study [IZF-1984-36] p 95 N86-17986
TARS
Health and Environmental Effects of Complex Chemical Mixtures [DE85-016336] p 92 N86-16892
TASK COMPLEXITY
The effect of skill on performance under an environmental stressor p 94 A86-20408
TELEOPERATORS
Human-machine interfaces for teleoperators: An overview of research and development at the Oak Ridge National Laboratory. Consolidated Fuel Reprocessing Program [DE85-017713] p 100 N86-17990
TEMPERATURE
Simultaneous determination of fluid shifts during thermal stress in a small animal model [AD-A159363] p 83 N86-16877
TENSILE PROPERTIES
Resistane, exchange and capacitance functions of skeletal muscle vessels in the presence of acute hypoxic hypoxia p 81 A86-22593
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594
TETHERING
Protein crystal growth results from shuttle flight 51-F [NASA-CR-178540] p 82 N86-16875
THERMAL COMFORT
Development of an improved liquid cooling system --- in protective clothing p 97 A86-19341
THERMAL EXPANSION
Volume and density changes of biological fluids with temperature p 79 A86-20001
THERMAL INSULATION
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333
THERMAL SIMULATION
Experimental validation of training regime and a monitoring method connected with accelerated adaptation to heat p 88 A86-22524
THERMOREGULATION
Thermoregulation in man under thermal stress p 89 A86-22541
Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544
THORAX
The use of thoracic impedance for determining thoracic blood volume changes in man p 87 A86-20406
THROMBOCYTES
The dependence of thromboelastographic indices in healthy subjects on geomagnetic-field conditions p 90 A86-22545
THROMBOSIS
Cerebral thrombosis at altitude - Its pathogenesis and the problems of prevention and treatment p 87 A86-20410
TIME DEPENDENCE
Age, degraded viewing environments, and the speed of accommodation p 87 A86-20407
Experimental validation of training regime and a monitoring method connected with accelerated adaptation to heat p 88 A86-22524
The effect of short term hypoxia on body temperature and lactic acid in blood p 81 A86-22595
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890
TIME LAG
Effect of time span and task load on pilot mental workload [NASA-CR-177388] p 99 N86-16901
TISSUES (BIOLOGY)
Laser ablation of human atherosclerotic plaque without adjacent tissue injury p 91 A86-22711
TOLERANCES (PHYSIOLOGY)
Mechanical resistance of erythrocytes and oxygen mass transport in hypoxic states due to different conditions p 88 A86-21452
Defense strategies against hypoxia and hypothermia p 81 A86-22258
Increased resistance of the brain to hypoxia due to a combination of lithium hydroxybutyrate and indomethacine p 81 A86-22548
TOUCH
Underlying behavioral parameters of the operation of tough-input devices - Biases, models, and feedback p 98 A86-20110
TOXIC HAZARDS
Canadian developments in aircrew chemical defence protection p 97 A86-19342
TOXICOLOGY
USAF toxicology research on petroleum and shale-derived aviation gas turbine fuels [ASME PAPER 85-GT-34] p 80 A86-22023
TRACHEA
Assessment of individual human exposures to ozone in a health study [PB85-245975] p 94 N86-17984
TRAINING EVALUATION
Naval Training Command mishaps and instructor experience p 94 A86-20409
Experimental validation of training regime and a monitoring method connected with accelerated adaptation to heat p 88 A86-22524
Instructions for flight crew members and flight crew training and examination guidelines of the West German Federal Board of Transport [REPT-1] p 95 N86-17985
TRANSOCEANIC FLIGHT
Disturbance of the multiperiodic synchronization of the heart-beat and respiratory rhythms after transmeridian flights through three time zones p 88 A86-22533

U

UNDERWATER BREATHING APPARATUS
Pilot underwater high pressure emergency breathing system p 97 A86-19343
Performance comparison of thirty, two-stage demand regulators --- underwater breathing apparatus [ARE(M6)-TM-83818] p 99 N86-17987
URINE
Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

V

VAPOR BARRIER CLOTHING
Heat transfer in impermeable clothing: Sweat plays a role after all [IZF-1985-9] p 100 N86-17992
VASCULAR SYSTEM
Changes in the heart rate and in the cerebral vascular tonus affected by alternating physical and mental loads p 89 A86-22535
Changes in the function of skeletal muscle vessels due to the cardiogenic depressor reflex p 81 A86-22594
VEINS
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure p 90 A86-22542
VELOCITY DISTRIBUTION
Velocity coding - Evidence from perceived velocity shifts p 94 A86-20900
VELOCITY MEASUREMENT
Velocity coding - Evidence from perceived velocity shifts p 94 A86-20900
VENTS
A waterproof vent valve for immersion suits [REPT-515] p 99 N86-17988
VISUAL ACCOMMODATION
Age, degraded viewing environments, and the speed of accommodation p 87 A86-20407
VISUAL DISCRIMINATION
The dynamics of the human estimation of image size and its neurophysiological correlates p 89 A86-22539
VISUAL PERCEPTION
Velocity coding - Evidence from perceived velocity shifts p 94 A86-20900
VISUAL STIMULI
Invariant tuning of motion aftereffect p 94 A86-20899

W

WASHING
A study to define a set of requirements for cleansing agents for use in the Space Station whole body shower [NASA-CR-171910] p 99 N86-16903
WATER BALANCE
Changes in the blood electric conductivity caused by body immersion p 90 A86-22543
Mechanism for negative water balance during weightlessness An hypothesis p 91 A86-22664
WATER IMMERSION
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310
The effect of water ingress on buoyancy and thermal quality of survival suits p 97 A86-19333

WATER RECLAMATION

Hand grip strength decrease related to hand skin temperature' drop during six-hour ice cold water immersion p 86 A86-19348
Effects of raised body temperature on reasoning, memory, and mood p 86 A86-20002
Comparative cold responses of men and women to external and internal cold stimuli p 87 A86-20403
Cardiorenal-endocrine responses to head-out immersion at night p 91 A86-22666

WATER RECLAMATION

Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

WEIGHTLESSNESS

Mechanism for negative water balance during weightlessness An hypothesis p 91 A86-22664

WEST GERMANY

Instructions for flight crew members and flight crew training and examination guidelines of the West German Federal Board of Transport [REPT-1] p 95 N86-17965

WINTER

Thermoregulatory reactions to chilling in ice-cold water in fans of winter swimming p 90 A86-22544

WORK CAPACITY

The diaphoretic reflex in a complex of methods for estimating operator efficiency p 88 A86-21453
The risk of arterial hypertension and the features of functional brain asymmetry in workers employed in regularly repeated expedition-type work p 88 A86-22534
The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537
Heat adaptation during training by graded hyperthermia p 89 A86-22538
Calculation method for determining energy expenditures for operators p 90 A86-22567

WORK-REST CYCLE

Variations in state of vigilance during continuous operations at a command post [DRIC-T-7503] p 95 N86-16900

WORKLOADS (PSYCHOPHYSIOLOGY)

Calculation method for determining energy expenditures for operators p 90 A86-22567
Variations in state of vigilance during continuous operations at a command post [DRIC-T-7503] p 95 N86-16900
Effect of time span and task load on pilot mental workload [NASA-CR-177388] p 99 N86-16901

Y

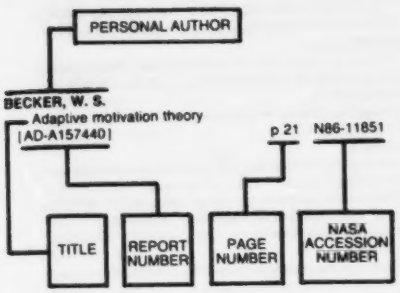
YAG LASERS

Characterization of YAG lasers for ophthalmologic applications [SNIAS-852-430-107] p 93 N86-16894

YEAST

Determining a carbohydrate profile for Hansenula polymorpha p 82 A86-22710

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ADAMS, E. M.
Ventilatory responses of hamsters and rats to hypoxia and hypercapnia p 79 A86-20005

ADAMS, J. D.
Decompression sickness and intravenous bubble formation using a 7.8 psi simulated pressure-suit environment p 85 A86-19347

AFONINA, S. N.
Changes in immunoreactivity during adaptation to intervals of hypoxic hypoxia p 80 A86-21451

ALEKSANDROVA, E. A.
Changes in the blood electric conductivity caused by body immersion p 90 A86-22543

ALGERA, R.
Development of an improved liquid cooling system p 97 A86-19341

ANDERSEN, H. T.
Effects of 9-hour time zone changes on fatigue and circadian rhythms of sleep/wake and core temperature [NASA-TM-88197] p 92 N86-16890

ANDERSON, L.
Protein mapping and the problem of complexity in molecular biology [DE85-018349] p 85 N86-17979

ANDERSON, N.
Protein mapping and the problem of complexity in molecular biology [DE85-018349] p 85 N86-17979

ANICHINI, A.
HLA-D: The T cell perspective [AD-A160019] p 84 N86-17976

ARSENTEV, B. A.
Possible effect of hyperlipemia on the development and course of atherosclerosis in flight personnel p 90 A86-22568

ASAJI, T.
Cerebral thrombosis at altitude - Its pathogenesis and the problems of prevention and treatment p 87 A86-20410

ATADZHANOVA, Z. R.
Microcirculatory changes in rats with burn shock following adaptation to high-altitude hypoxia p 81 A86-22547

B

BACH, F. H.
HLA-D: The T cell perspective [AD-A160019] p 84 N86-17976
Clonal analysis of HLA-DR and -dQ associated determinants: Their contribution to dw specificities [AD-A160059] p 84 N86-17977

BAKER, A. H.
Molecular sieve oxygen systems and aircraft role p 96 A86-19315

BALCZON, R.
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709

BANERJI, N.
Task parameters affecting individual differences in pursuit and compensatory tracking performance p 95 A86-20972

BARNEY, J. A.
The use of thoracic impedance for determining thoracic blood volume changes in man p 87 A86-20406

BARRETT, T. W.
Inverse Faraday effect in hemoglobin detected by Raman spectroscopy: An example of magnetic resonance Raman activity [AD-A159806] p 84 N86-17975

BARTRAM, D.
Task parameters affecting individual differences in pursuit and compensatory tracking performance p 95 A86-20972

BAUMGARDNER, J. E.
Transport of arterial blood gases through human skin p 91 N86-16887

BERG, S. L.
Effect of time span and task load on pilot mental workload [NASA-CR-177388] p 99 N86-16901

BERINGER, D. B.
Underlying behavioral parameters of the operation of tough-input devices - Biases, models, and feedback p 96 A86-20110

BERRY, W.
Animal studies on Spacelab-3 [NASA-TM-88212] p 92 N86-16889

BESTOR, T.
Intracellular pH shift leads to microtubule assembly and microtubule-mediated motility during sea urchin fertilization - Correlations between elevated intracellular pH and microtubule activity and depressed intracellular pH and microtubule disassembly p 82 A86-22709

BOBKOV, IU. G.
Increased resistance of the brain to hypoxia due to a combination of lithium hydroxybutyrate and indomethacine p 81 A86-22548

BOOTHBY, G.
Calcium antagonists in the prevention of motion sickness p 87 A86-20405

BOOZE, C. F., JR.
A comparison of postmortem coronary atherosclerosis findings in general aviation pilot fatalities [AD-A159811] p 93 N86-17982

BOROWSKY, M. S.
Naval Training Command mishaps and instructor experience p 94 A86-20409

BRAGT, P. C.
Report of the symposium on biological monitoring of exposure to metals and other inorganic compounds [MBL-1985-6] p 85 N86-17980

BRASSELL, S. C.
Archaebacterial lipids in hot-spring microbial mats p 80 A86-21587

BROMMAGE, R.
Regulation of bone mineral loss during lactation p 82 A86-22713

BROOKS-MCQUADE, D.
Simultaneous determination of fluid shifts during thermal stress in a small animal model [AD-A159363] p 83 N86-16877

BROOKS, C. J.
How much inherent buoyancy is acceptable in a helicopter passenger immersion suit p 96 A86-19310

BUCHANAN, P.
Controlled ecological life support systems for space habitats p 98 A86-22325

BUDININKAS, P.
Catalytic distillation water recovery subsystem [NASA-CR-177382] p 99 N86-16902

BUGAT, R.
Variations in state of vigilance during continuous operations at a command post [DRIC-T-7503] p 95 N86-16900

BUGG, C. E.
Protein crystal growth results from shuttle flight 51-F [NASA-CR-178540] p 82 N86-16875

BUGUET, A.
Variations in state of vigilance during continuous operations at a command post [DRIC-T-7503] p 95 N86-16900

BUKVAREVA, L. I.
The diaphoretic reflex in a complex of methods for estimating operator efficiency p 88 A86-21453

C

CALLAHAN, P.
Animal studies on Spacelab-3 [NASA-TM-88212] p 92 N86-16889

CALLAHAN, P. X.
Ames Research Center Life Sciences Payload - Overview of results of a spaceflight of 24 rats and 2 monkeys [AIAA PAPER 86-0583] p 79 A86-19963

CAREN, L. D.
An overview of space physiology and related experiments on Spacelab 1 p 87 A86-21097

CASSIDY, R.
Molecular sieve oxygen systems and aircraft role p 96 A86-19315

CHAZOV, Y.
Advances in nerve cell research p 91 N86-16882

CHESTUKHIN, V. V.
Correlation between the arterial blood pressure, the pulmonary artery pressure, and central venous pressure p 90 A86-22542

CLANTON, T. L.
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003

CLAYBAUGH, J. R.
Cardiorenal-endocrine responses to head-out immersion at night p 91 A86-22666

COGGAN, A. R.
Effects of detraining on cardiovascular responses to exercise - Role of blood volume p 91 A86-22665

CONVERTINO, V. A.
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402

COOPER, D. W.
Expedient methods of respiratory protection. 3: Submicron particle tests and summary of quality factors [TI85-018278] p 94 N86-17983

COYLE, E. F.
Effects of detraining on cardiovascular responses to exercise - Role of blood volume p 91 A86-22665

CRIBORN, C. O.
Biological effects of millimeter waves on the mouse [FOA-C-50023-H1] p 83 N86-16879

D

DAVIS, H. M.
Effects of raised body temperature on reasoning, memory, and mood p 86 A86-20002

DELUCA, H. F.
Regulation of bone mineral loss during lactation p 82 A86-22713

DESIMONE, D. N.
U.S. Navy ALSS corporate report 1984 p 96 A86-19309

DICKERSON, L.
Protective respirator for the AAH-64 Advanced Attack Helicopter p 97 A86-19336
DIXON, G. A.
Decompression sickness and intravenous bubble formation using a 7.8 psi simulated pressure-suit environment p 85 A86-19347
DIXON, G. F.
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003
DOLBEARE, F. A.
Improved monoclonal antibodies to halodeoxyuridine [DE85-017764] p 92 N86-16891
DRAKE, J.
Effects of breathing pattern on inspiratory muscle endurance in humans p 86 A86-20003
DRAPER, J. V.
Human-machine interfaces for teleoperators: An overview of research and development at the Oak Ridge National Laboratory. Consolidated Fuel Reprocessing Program
[DE85-017713] p 100 N86-17990
DUNN, C. D. R.
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404
DURKOT, M. J.
Simultaneous determination of fluid shifts during thermal stress in a small animal model
[AD-A159363] p 83 N86-16877
DUTTON, B.
Simulator sickness - Incidence of simulator aftereffects in Navy flight trainers p 85 A86-19346

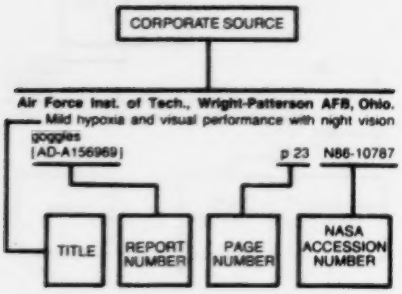
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Admiralty Marine Technology Establishment, Portsmouth (England).
The evaluation of copper compounds as potential fuel biocides
[AMTE(M)-84520] p 84 N86-17974
Performance comparison of thirty, two-stage demand regulators
[ARE(M6)-TM-83818] p 99 N86-17987

Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
Model evalution of spinal injury likelihood for various ejection system paramater variations p 91 N86-16641

Air Force Academy, Colo.
Proceedings of the Air Force Conference on Technology in Training and Education (TITE)
[AD-A157829] p 95 N86-16897

Alabama Univ., Birmingham.
Protein crystal growth results from shuttle flight 51-F
[NASA-CR-178540] p 82 N86-16875

Argonne National Lab., Ill.
Protein mapping and the problem of complexity in molecular biology
[DE85-018349] p 85 N86-17979

Arizona Univ., Tucson.
Bedrest-induced peak VO2 reduction associated with age, gender, and aerobic capacity p 87 A86-20402

Army Research Inst. of Environmental Medicine, Natick, Mass.
A system of rat restraint using a cone-shaped, plexiglass and stainless steel rod cage
[AD-A158428] p 83 N86-16876
Simultaneous determination of fluid shifts during thermal stress in a small animal model
[AD-A159383] p 83 N86-16877

B

Baylor Univ., Houston, Tex.
Regulation of hematopoiesis in rats exposed to antiorthostatic hypokinetic/hypodynamia. II - Mechanisms of the 'anemia' p 80 A86-20404

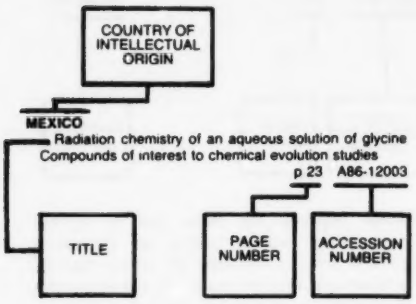
Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRALIA

Calcium antagonists in the prevention of motion sickness p 87 A86-20405

C

CANADA

Canadian developments in aircrew chemical defence protection p 97 A86-19342

Defense strategies against hypoxia and hypothermia p 81 A86-22258

D

DENMARK

An intron in the 23S ribosomal RNA gene of the archaebacterium Desulfurococcus mobilis p 80 A86-21588

E

ESTONIA

The effect of different regimens of running training on the physical work capacity and blood plasma lipids and lipoproteins in untrained male and female students p 89 A86-22537

F

FINLAND

Hand grip strength decrease related to hand skin temperature drop during six-hour ice cold water immersion p 86 A86-19348

FRANCE

Characterization of YAG lasers for ophthalmologic applications
[SNIAS-852-430-107] p 93 N86-16894

Variations in state of vigilance during continuous operations at a command post

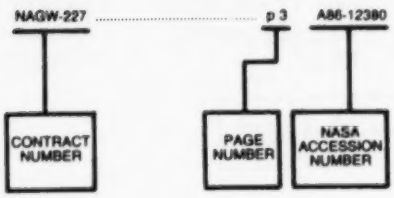
CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

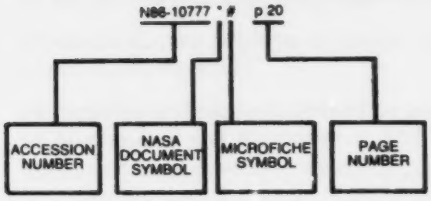
ACCESSION NUMBER INDEX

Typical Accession Number Index Listing



Listings in this index are arranged alpha-numerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

AVAILABILITY SOURCE
The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

NAS 1.21:

ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges.

STAR (N-10000 Series)	N86-18284 – N86-21499
IAA (A-10000 Series)	A86-22714 – A86-26299

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates.

NASA SP-7011(285)

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 285)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in May 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1986
National Aeronautics and Space Administration
Washington, DC

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A06.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 319 reports, articles and other documents announced during May 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

INCREASED GLUCONEOGENESIS IN RATS EXPOSED TO HYPER-G STRESS
B. C. DALIGCON, J. OYAMA, and K. HANNAK (NASA, Ames Research Center, Moffett Field, CA) Life Sciences (ISSN 0024-3205), vol. 37, no. 3, 1985, p. 235-241. refs

The effect of gluconeogenesis on the levels of plasma glucose and liver glycogen was studied in rats exposed to hyper-G stress. Incorporation of lactate, alanine, or glycerol, labeled with C-14, into plasma glucose and liver glycogen was measured in rats centrifuged at 3.1 G for 0.25, 0.50, and 1.0-hr periods, and was compared to noncentrifuged controls injected with appropriate glycogen precursors. It was found that exposure to G-stress leads to increased incorporation from all three substrates into both plasma glucose and liver glycogen. These early incorporation increases were blocked upon pre-G administration of 5-methoxyindole-2-carboxylic acid, a gluconeogenesis inhibitor, or propanolol, a beta-adrenergic blocker, as well as by adrenodemedullation. Results indicate that the rapid rise in plasma glucose, as well as in liver glycogen in rats exposed to hyper-G stress is due to an increased rate of gluconeogenesis, and that epinephrine, released in response to hyper-G-induced activation of the sympathetic-adrenal system, plays a dominant role during the early stages of hyper-G stress. I.S.

A86-23491
MECHANISM OF NORADRENALINE EFFECT ON THE SKIN THERMORECEPTORS [O MEKHANIZME DEISTVIIA NORADRENALINA NA KOZHNYE TERMORETSEPTORY]
T. V. KOZYREVA and I. N. SINDAROVSKAIA (Institut Klinicheskoi i Eksperimental'noi Meditsiny, Novosibirsk, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Nov. 1985, p. 1344-1350. In Russian. refs

Skin surface and intradermal temperatures, rectal temperature, and oxygen consumption were recorded continuously in cold-adapted and nonadapted rats following the injection of noradenaline by either intraperitoneal or intraarterial routes. Among the measured parameters, only the intradermal temperature response depended upon the route of administration: intraperitoneal injection caused, after a short latent period, an increase in temperature, whereas interaarterial administration led to a decrease in temperature, followed by a gradual increase. All other measured parameters have displayed increases after either type of injection, and in the cold-adapted animals, all noradrenaline-effected changes were enhanced compared to nonadapted animals. Injections of noradrenaline by either route were shown earlier (Kosyreva, 1984) to equally activate skin cold receptors, indicating by this uniformity that their activation was independent of the capillary tonus, which causes the observed intradermal temperature changes. A mechanism of direct hormonal activation of the receptor membranes is suggested. I.S.

A86-23492
EFFECT OF HYPEROXIC GAS MIXTURES ON OXYGEN MASS TRANSFER THROUGH THE HEMATOPARENCHYMATOUS BARRIER [VLIIANIE GIPEROKSICHESKIKH GAZOVYKH SMESEI NA MASOPERENOS KISLORODA CHEREZ GEMOTOPARENKHIMATOZNYI BAR'ER]
V. A. BEREZOVSKII and V. I. NOSAR (AN USSR, Institut Fiziologii, Kiev, Ukrainian SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Nov. 1985, p. 1403-1407. In Russian. refs

The effect of inhaling oxygen-enriched gas mixtures, containing 80 pct O2 and 20 pct of either N2 or He, on the oxygen permeability through the blood-tissue barrier was studied in rabbits under local anesthesia. Hind-limb arterial and venous oxygen pressures, O2 pressure in the muscle tissue, and other parameters of O2 blood-tissue permeability were measured before and after application of the hyperoxic mixtures. Inhalation of either hyperoxic mixture was found to cause a drop of O2 transport to about one-fifth of the control values, indicating that the hyperoxia per se evokes a protective reaction against hyperoxygenation. I.S.

A86-23493
INTERACTION OF THE THERMORECEPTOR AND VESTIBULAR SIGNALS IN THE REGULATION OF THE ACTIVITY OF FLEXOR AND EXTENSOR MOTOR NUCLEI DURING COLD TREMORS [VZAIMODEISTVIE TERMORETSEPTIVNOI I VESTIBULIARNOI SIGNALIZATSII V REGULIATSII AKTIVNOSTI FLEKSORNOGO I EKSTENZORNOGO DVIGATEL'NYKH IADER VO VREMIA KHOLODOVOGO TREMORA]
IU. V. LUPANDIN and G. I. KUZMINA (Petrozavodskii Gosudarstvennyi Universitet, Petrozavodsk, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Nov. 1985, p. 1433-1438. In Russian. refs

A86-23553* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
SPACE STATION LIFE SCIENCES GUIDELINES FOR NONHUMAN EXPERIMENT ACCOMMODATION
R. ARNO (NASA, Ames Research Center, Moffett Field, CA) and J. HILCHEY (NASA, Marshall Space Flight Center, Huntsville, AL) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 13 p. refs
(SAE PAPER 851370)

Life scientists will utilize one of four habitable modules which constitute the initial Space Station configuration. This module will be initially employed for studies related to nonhuman and human life sciences. At a later date, a new module, devoted entirely to nonhuman life sciences will be launched. This report presents a description of the characteristics of a Space Station laboratory facility from the standpoint of nonhuman research requirements. Attention is given to the science rationale for experiments which support applied medical research and basic gravitational biology, mission profiles and typical equipment and subsystem descriptions, issues associated with the accommodation of nonhuman life sciences on the Space Station, and conceptual designs for the initial operational capability configuration and later Space Station life-sciences research facilities. G.R.

A86-23568
SIMULATION MODEL FOR PLANT GROWTH IN CONTROLLED ENVIRONMENT SYSTEMS
D. C. RAPER, JR. and M. WANN (North Carolina State University, Raleigh) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 7 p. refs
(SAE PAPER 85-1390)

The development of a model which will assist in the designing of a crop production system is discussed. The utilization of the abstraction hierarchy theory of Mesrovic et al., (1970) to define the level of hierarchy for a crop production system is studied. The deterministic model for plant growth, which was developed, describes the growth of plants subjected to various environment conditions. The model analyzes the processes of: (1) photosynthetically active radiation, (2) translocation between carbohydrate pools in leaves, stems, and roots, (3) flow of energy and carbon, and (4) aging of tissues. The effect of temperature on photosynthesis, respiration, aging, and growth rates, and the translocation coefficients is investigated. The applications of nonlinear differential equations to the flow of energy and carbon, and of experimental data to the translocation coefficients and aging rates are examined. The structure of the model provides the capacity for interpolating among the levels within a crop production system of a controlled ecological life support system. I.F.

A86-23572
THE C23A SYSTEM, AN EXAMPLE OF QUANTITATIVE CONTROL OF PLANT GROWTH ASSOCIATED WITH A DATA BASE
M. ANDRE, A. DAGUENET, D. MASSIMINO, and A. GERBAUD (CEA, Centre d'Etudes Nucleaires de Cadarache, Saint-Paul-les-Durance, France) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 12 p. refs
(SAE PAPER 851395)

The C23A (Chambres de Culture Automatique en Atmospheres Artificielles) system which is used for the controlled study of plant physiology is described. The modular plant growth chambers and instruments for the study of canopies, isolated plants with a separate root compartment, and acquatic plants are examined. The uses of a mass spectrometer and a CO2 infrared analyzer to monitor shoot and root atmospheres, and of a chemical autoanalyzer to calculate uptake rates for elements are analyzed. The microprocessors, central computer, and satellite microcomputers of the computer system control the culture chambers and measuring systems, provide visual or graphical control, and store all data in short- and long-term files. Examples of experimental studies conducted in the C23A system evaluating the photosynthesis and photorespiration of various plants are presented. I.F.

A86-23574
DESCRIPTION OF CONCEPT AND FIRST FEASIBILITY TEST RESULTS OF A LIFE SUPPORT SUBSYSTEM OF THE BOTANY FACILITY BASED ON WATER RECLAMATION
H. R. LOESER (ERNO Raumfahrttechnik GmbH, Bremen, West Germany) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 14 p.
(SAE PAPER 851397)

A water reclamation module which controls the temperature and humidity of the air within the Botany Facility is proposed. The water reclamation process is achieved by condensation with a heat pump and capillary transport of the condensate back into the soil of the plant growth chamber. An analysis is conducted to calculate the circulation flow rates and specific power consumption. The design of a prototype water reclamation module which utilizes a Peltrier element and a condenser/wick assembly to return elements to the soil and the experimental conditions are described. The module is evaluated in terms of condensation rate and condensor temperature as a function of the cold side mass of flow rate; the water reclamation process proves applicable for the Botany Facility. I.F.

A86-23996
MOLECULAR ARCHAEOLOGY OF THE MITOCHONDRIAL GENOME
R. OBAR (Boston University, MA) and J. GREEN (Tennessee, University, Knoxville) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 3, 1985, p. 243-251. refs
(Contract NSF PCM-82-03004)

A stepwise model for the net transfer of nucleic acid sequences between nonhomologous genomes has been developed. This model is then used to explain the two major patterns in the evolutionary history of mitochondrial genomes: the gross reduction of the number of genes, and the subsequent acquisition of introns. Author

A86-23997
A MULTIVARIATE STUDY OF THE RELATIONSHIP BETWEEN THE GENETIC CODE AND THE PHYSICAL-CHEMICAL PROPERTIES OF AMINO ACIDS
M. SJOSTROM and S. WOLD (Umea Universitet, Sweden) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 3, 1995, p. 272-277. Research supported by the Naturvetenskapliga Forskningsradet. refs

A86-23998* Indiana Univ., Bloomington.
SEQUENCE OF THE 16S RRNA GENE FROM THE THERMOACIDOPHILIC ARCHAEBACTERIUM SULFOLOBUS SOLFATARICUS AND ITS EVOLUTIONARY IMPLICATIONS
G. J. OLSEN, N. R. PACE (Indiana University, Bloomington), M. NUELL, B. P. KAINE, R. GUPTA (Illinois, University, Urbana) et al. Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 4, 1985, p. 301-307. refs

SEQUENCE DIVERGENCE OF AN ARCHAEBACTERIAL GENE CLONED FROM A MESOPHILIC AND A THERMOPHILIC METHANOGEN
P. T. HAMILTON and J. N. REEVE (Ohio State University, Columbus) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 4, 1985, p. 351-360. Research supported by the Gas Research Institute. refs
(Contract DE-AC02-81ER-10945; EPA-CR-810340)

A86-24000* California Univ., Berkeley.
A CHANGE IN THE GENETIC CODE IN MYCOPLASMA CAPRICOLUM
T. H. JUKES (California, University, Berkeley) Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 4, 1985, p. 361, 362. refs
(Contract NGR-05-003-460)

Mycoplasma capricolum was previously found to use UGA instead of UGG as its codon for tryptophan and to contain 75 percent A + T in its DNA. The codon change could have been due to mutational pressure to replace C + G by A + T, resulting in the replacement of UGA stop codons by UAA, change of the anticodon in tryptophan tRNA from CCA to UCA, and replacement of UGG tryptophan codons by UGA. None of these changes should have been deleterious. Author

A86-24136
METABOLIC ASPECTS OF THE PROBLEM OF STRESS IN SPACE FLIGHT [METABOLICHESKIE ASPEKTY PROBLEMY STRESSA V KOSMICHESKOM POLETE]
R. A. TIGRANIAN Moscow, Izdatel'stvo Nauka (Problemy Kosmicheskoi Biologii. Volume 52), 1985, 224 p. In Russian. refs

The character of the possible stress response to space flight is examined along with the nature of adaptation to this type of stress. Data are presented on changes of stress indicators (catecholamines, hormones, peptides, polyamines, enzymes, lipids, etc.) in various organs and tissues of rats on prolonged space flights (18.5-22 days) on the Cosmos biosatellites. In particular, the combined effect of weightlessness and ionizing radiation was studied on Cosmos-690, and the effect of weightlessness and artificial gravity was studied on Cosmos-936. Stress-response mechanisms associated with prolonged stay in weightlessness are considered along with the subsequent readaptation to terrestrial gravity. B.J.

IONIZING RADIATION AND BLOOD VESSELS [IONIZIRUIUSHCHIE IZLUCHENIIA I KROVENOSNYE SOSUDY]
E. I. VOROBEV and R. P. STEPANOV Moscow, Energoatomizdat, 1985, 296 p. In Russian. refs

Results of clinical and experimental studies on the effects of ionizing radiation on the vascular system are presented. Effects of low-level chronic exposure, and both short-term and delayed effects of radiation therapy are discussed, including organ-specific, as well as general, vascular and hemodynamic changes. Laboratory studies of primary and secondary effects of radiation on the aortal and capillary endothelia are reported, and the processes of intracellular and tissue repair in the capillary endothelium are described. Special attention is paid to studies concerned with the prevention and treatment of radiation sickness. I.S.

HOW DOES SKELETAL MUSCLE EFFECTIVELY FUNCTION BOTH IN THE CASE OF POSTURE MAINTENANCE AND TWITCH MOVEMENTS? [ZA SCHET CHEGO SKELETNAIA MYSHTSA EFFEKTIVNO RABOTAET KAK PRI PODDERZHANII POZY, TAK I V FIZICHESKIKH DVIZHENIIAKH]
V. S. GURFINKEL and IU. S. LEVIK (AN SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR) Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 285, no. 5, 1985, p. 1241-1245. In Russian. refs

Experiments were conducted in which electric stimuli were used to simulate pulsed sequences of motor unit under the twitch and tonic activity of muscles. The results indicate that skeletal muscle functions effectively in both postural and twitch modes not only because of the presence of fast and slow fibers, but also because the contractile properties of one and the same fibers can change. ANTISTRESS EFFECT OF 1-CHLORMETHYLSILITRANE [ANTISTRESSNYI EFFEKT 1-KHLORMETILSILATRANA]
V. V. MALYSHEV, T. P. DVORETSKAIA, V. B. KAZIMIROVSKAIA, N. S. KAMENEVA, E. IU. SMAKOLINA (Irkutskii Gosudarstvennyi Meditsinskii Institut; AN SSSR, Institut Organicheskoi Khimii, Irkutsk, USSR) et al. Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 285, no. 5, 1985, p. 1249-1251. In Russian. refs

The effect of 1-chlormethylsilitrane (1-CMS) on the development of emotional stress was studied in 80 white male rats. Results indicate that a preliminary administration of 1-CMS prevents the stress activation of the adrenergic and hypophyseal-adrenal systems, i.e., this drug has powerful antistress effect. It is concluded that the further study of the adaptogenic properties of silicon compounds is of interest in connection with the production of stress-preventing drugs. B.J.

HYPNOGENIC ACTIVITY OF A CYCLIC STRUCTURAL ANALOG OF DELTA-SLEEP-INDUCING PEPTIDE [GIPNOGENNAIA AKTIVNOST' TSIKLICHESKOGO STRUKTURNOGO ANALOGA DEL'TA-SON-INDUTSIRUIUSHCHEGO PEPTIDA]
V. M. KOVALZON (AN SSSR, Institut Evoliutsionnoi Morfologii i Ekologii Zhivotnykh, Moscow, USSR) and I. I. MIKHALEVA (AN SSSR, Institut Bioorganicheskoi Khimii, Moscow, USSR) Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 286, no. 1, 1986, p. 230-232. In Russian. refs

It is shown that a cyclic analog of delta-sleep-inducing peptide (DSIP) has the same hypnogenic effect on rabbits in the case of central administration as linear analogs that are stable with respect to aminopeptidases. This is evidently due to two factors: (1) a heightened stability of the cyclic analog with respect to proteolysis, and (2) an adequate conformational structure. This supports the hypothesis that the quasi-cyclic conformation of DSIP participates in the regulation of the sleep-wakefulness cycle. B.J.

POSTRADIATION DISORDERS OF PERIPHERAL-NERVE REGENERATION AND THE ROLE OF FREE-RADICAL OXIDATION PRODUCTS IN THE APPEARANCE OF THESE DISORDERS [POSTRADIATSIONNYE NARUSHENIIA REGENERATSII PERIFERICHESKOGO NERVA I ROL' PRODUKTOV SVOBODNORADIKAL'NOGO OKISLENIIA V IKH VOZNIKNOVENII]
V. N. RADLINSKAIA, I. A. ZHUTAEV, V. N. BOBYREV, and O. N. VOSKRESENSKII (Poltavskii Meditsinskii Stomatologicheskii Institut, Poltava, Ukrainian SSR) Radiobiologia (ISSN 0033-8192), vol. 25, Nov.-Dec. 1985, p. 728-732. In Russian. refs

The effect of local unilateral gamma-radiation and of alimentary antioxidant deficiency on nerve regeneration was studied in guinea pigs subjected to bilateral severance of sciatic nerves and maintained on either regular (i.e., antioxidant-supplemented) or antioxidant-free diet for 80 days prior to irradiation. All irradiated animals exhibited peroxidation syndrome, manifested by the appearance of free-radical oxidation products in blood components, as well as morphological abnormalities in the irradiated regenerating nerve (short and/or abnormally-shaped axons, and demyelination). In the antioxidant-deficient animals the extents of both peroxidation syndrome and morphological abnormalities were enhanced. Moreover, the nerve regeneration was now observed in both irradiated and contralateral sciatic nerves. I.S.

MECHANISM OF CIRCULATORY DISORDERS IN ANIMALS SUBJECTED TO HIGH-DOSE IRRADIATION [K MEKHANIZMU RASSTROISTV KROVOOBRASHCHENIIA U ZHIVOTNYKH, OBLUCHENNYKH V BOL'SHIKH DOZAKH]
T. D. POZHARISSKAIA, T. P. VASILEVA, E. N. SOKOLOVA, and I. I. ALEKSEEVA (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Radiobiologiia (ISSN 0033-8192), vol. 25, Nov.-Dec. 1985, p. 763-767. In Russian. refs

The effect of lethal doses of gamma-radiation on the vascular system of dogs and rats was studied by monitoring postradiation changes in blood-cell count and morphology, blood coagulation indices, and the rate of peripheral blood flow. A single radiation dose (of 180 gR for rats and in the 18-145 gR range for dogs) led to the abrupt and sharp decline of white blood cell count, which was accompanied by multiple hemorrhages in the intestinal mucosa, the brain stem, and cerebral membranes, and by the appearance of disseminated intravascular hypercoagulation. The rate of capillary circulation (in the rat appendix) was found to decrease to one-half to one-quarter of the original rate. The significance of the early onset of hypercoagulation in clinical manifestations of intestinal and cerebral forms of acute radiation sickness is discussed. I.S.

THE LIFE SCIENCES ON BOARD OF SPACELAB D1 [DIE LEBENSWISSENSCHAFTEN AN BORD VON SPACELAB D1]
S. PAECH Luft- und Raumfahrt (ISSN 0173-6264), vol. 6, 4th Quarter, 1985, p. 106, 108-110. In German.

During the last few years, it was realized that a study of the effects of weightlessness can be of fundamental importance even in the area of biology, taking into account biological organisms from a cell to a human being. This importance is related to the fact that only experiments under conditions of weightlessness can provide information of an indirect nature regarding the mechanisms by which gravity affects biological organisms. For this reason, biological experiments of very different chracteristics formed a part of the D1 mission. The most important of these experiments are discussed, taking into account studies involving cells and other microorganisms, hatching experiments concerning frogs and flies, the effects of weightlessness on germinating plants, questions regarding the control of the transport of hormones during cell growth in plants by gravity, the behavior of the human body during the transition to weightlessness conditions, and functional disturbances caused by conditions of weightlessness. EFFECT OF ROTOPOSITIONING ON THE GROWTH AND MATURATION OF MANDIBULAR BONE IN IMMOBILIZED RHESUS MONKEYS
D. J. SIMMONS, C. PARVIN, K. C. SMITH, P. FRANCE (Washington University, St. Louis, MO; USAF, Aerosspace Medical Research Laboratories, Wright-Patterson AFB, OH), and L. KAZARIAN Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 157-161. refs
(Contract NAGW-301)

The rates of bone formation and mineralization in the mandibular cortex of juvenile Rhesus monkeys exposed to immobilization/rotopositioning are evaluated. The monkeys were restrained in a supine position and rotated 90 deg every 30 minutes through a full 360 deg for 14 days. The microscopic distribution of mineral densities in osteonal bone and the porosity of cortical bone are studied using microradiographs, and osteon closure rates are assessed using tetracycline labeling; normal distributions of osteons of different mineral density and cortical bone porosity values are observed. It is concluded that 14 days of immobilization/rotopositioning did not cause abnormal changes in osteon mineralization, cortical porosity, and osteon closure rates. I.F.

THYMIC INVOLUTION IN THE SUSPENDED RAT - ADRENAL HYPERTROPHY AND GLUCOCORTICOID RECEPTOR CONTENT
J. M. STEFFEN and X. J. MUSACCHIA (Louisville, University, KY) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 162-167. refs
(Contract NSG-2325; NAGW-70)

The relationship between thymic involution and adrenal hypertrophy is studied. The thymus, adrenal glands, and tissue water content are evaluated in male Sprague rats suspended in antiorthostatic (AO) or orthostatic (O) positions. A 50 percent decrease in the wet weight of the thymus and hypertrophy of the adrenal glands are observed during the seven days of AO suspension. After seven days of recovery the thymus weight is increased to control level; however, the hypertrophy of the adrenal glands remains unchanged. Thymic and renal responses in O positioned rats are similar to AO reactions. Thymic glucocorticoid (GC) receptor concentrations in the rats are analyzed; a 20 percent decrease in GC receptor site concentration, which is related to thymic involution, is detected in both AO and O rats. It is concluded that there is a temporal correlation between thymic involution and adrenal hypertrophy, which is not affected by AO positioning, and thymic involution is not associated with an increased sensitivity to GC. I.F.

This is the third issue of NASA's USSR Space Life Sciences Digest. Abstracts are included for 46 Soviet periodical articles in 20 areas of aerospace medicine and space biology and published in Russian during the second third of 1985. Selected articles are illustrated with figures and tables from the original. In addition, translated introductions and tables of contents for seven Russian books on six topics related to NASA's life science concerns are

presented. Areas covered are adaptation, biospherics, body fluids, botany, cardiovascular and respiratory systems, endocrinology, exobiology, gravitational biology, habitability and environmental effects, health and medical treatment, immunology, life support systems, metabolism, microbiology, musculoskeletal system; neurophysiology, nutrition, perception, personnel selection, psychology, radiobiology, and space physiology. Two book reviews translated from the Russian are included and lists of additional relevant titles available in English with pertinent ordering information are given. Author

METABOLISM OF T-2 MYCOTOXIN BY CULTURED CELLS
L. R. TRUSAL 18 Sep. 1985 20 p
(Contract DA PROJ. 3M1-61102-BS-12)
(AD-A159678; AD-E801193) Avail: NTIS HC A02/MF A01 CSCL 06T

T-2 mycotoxin is a small (i.e. 466 daltons), non-protein toxin. We studied its metabolism in Chinese hamster ovary (CHO) cells, African green monkey kidney (VERO) cells, human fibroblasts, and L-cells. Confluent cells were exposed to (3H)-T-2(0.01 micrograms/ml) for 1 hr at 37 C. CHO and VERO cells metabolized T-2 a greater extent than the other two cell types. In CHO, fibroblast and L-cells, the major metabolite was HT-2 toxin while, in VERO cells, an unknown metabolite, more polar than T-2, was the major metabolite. Cell and media extracts of CHO and VERO cells revealed smaller amounts of T-2 triol, T-2 tetraol and several unknowns. In both cell types, metabolites were detected in labeled media by 1 hr and in increasing amounts in unlabeled media by 4 hr. Under the above conditions, 37 to 58% of the radioactivity remained as T-2 toxin after 4 hr in both cell types. The data suggest that some cultured cell lines possess enzyme systems capable of limited metabolism of T-2 mycotoxin to a variety of known and as yet unidentified metabolites. GRA

A selected number of immunobiologically active polypeptides have been found to be closely associated with, but separable from the lipopolysaccharide endotoxin (LPS) in the outer membrane of Gram-negative bacteria. Initially these endotoxin associated proteins (EP) from Bordetella pertussis, Salmonella typhi and Vibrio cholerae were found to enhance the immune response to cholera enterotoxin after immunization with cholera toxiod. At the cellular level, B. pertussis EP (PEP) is a mitogen and polyclonal activator of antibody producing B-lymphocytes of C3H/HeJ mouse lymphocytes which are unresponsive to LPS. PEP can adjuvant in vitro the production of IgM antibody to cholera toxin and sheep erythrocytes by mouse splenic lymphocytes. In control experiments we have shown that the activity of PEP cannot be neutralized by the cationic polypeptide polymyxin B which specifically neutralizes the lipid A component of LPS that is responsible for the simulating properties of LPS. In addition, our tests indicate PEP does not contain any detectable lymphocytosis promoting factor (LPF) activity. Preliminary experiments have shown that extracts of B. pertussis which contain both LPS and associated proteins are protective in the standard mouse model used for testing the efficacy pertussis vaccines. SEQUENCE POLYMORPHISM OF HLA-DR BETA 1 ALLELES RELATING TO T CELL-RECOGNIZED DETERMINANTS
J. S. CAIRNS, J. M. CURTSINGER, C. A. DAHL, S. FREEMAN, and B. J. ALTER 1985 14 p
(Contract N00014-85-K-0004; PHS-AI-17687; PHS-AI-18326; PHS-AI-19007)
(AD-A160237) Avail: NTIS HC A02/MF A01 CSCL 06C

HLA class II molecules are a highly polymorphic family of dimeric cell surface proteins primarily involved in regulating T cell responses to extrinsic antigens. To define regions of class II molecules involved in T cell recognition, we have compared sequences of three HLA-DR Beta cDNA clones obtained from cells that all express the same serologically defined determinants but differ in

terms of T cell-recognized specificities. The comparisons indicate that very few (one to four) nucleotides differ between what are almost certainly alleles of the DR beta 1 Locus. All differences were in the first domain of the molecule and all localized to a region from amino acids 71-86. Since all differences were found only in this region of the molecules, and since DR alpha chains seem to be relatively nonpolymorphic, these positions in the DR beta chain must play a major role in influencing T cell recognition of the DR molecule. Serological and molecular cloning experiments have shown that there are three families of class II molecules within the HLA complex, termed DP, DQ, and DR. For the DR4-DRw53 haplotype which we have studied, within the DR family, one alpha and three complete beta genes are known; one beta gene is a pseudogene. At least two DR alpha beta dimers are expressed. GRA

IDENTIFICATION AND QUANTIFICATION OF THE WATER-SOLUBLE COMPONENTS OF JP-4 AND A DETERMINATION OF THEIR BIOLOGICAL EFFECTS UPON SELECTED FRESHWATER ORGANISMS Final Technical Report, 30 Sep. 1978 - 27 Feb. 1984

J. D. BRAMMER and R. L. PUYEAR 1 Jul. 1985 14 p
(Contract AF-AFOSR-3709-78)
(AD-A160271; AFOSR-85-0743TR) Avail: NTIS HC A02/MF A01 CSCL 07C

This final technical report includes a brief summary of research performed, results obtained, graduate students supported and theses written. One paper published was of a technical nature and describes the use of reverse-phase C-18 minicolumns for concentrating water soluble hydrocarbons derived from JP-4 jet fuel. Another technical paper using the same technique as the first was used to concentrate water soluble hydrocarbons produced by running an outboard motor in water. Analytical methods used for hydrocarbon separation and identification was GC, GC/MS and HPLC. The toxicity of toluene on the fathead minnow was the basis of three papers and a Ph.D. Thesis. It was found that the embryo was as sensitive to toluene than was the protolarvae or adult fish. This was determined using 96-hr LC50 tests. An MS thesis was written on the effects of toluene on gill structure in the fathead minnow adult. Little effect of toluene on gill structure was noted. A comparative study on the effects of administration of benzene, toluene and xylene isomeres on their in vitro metabolism and various drug metabolizing enzymes in rat liver, and the covalent binding of toluene to rat liver microsomes has resulted in one Ph.D. Thesis and the preparation of three manuscripts for publication. USE OF TYROSINE OR FOODS TO AMPLIFY CATECHOLAMINE RELEASE Interim Technical Report, 30 Sep. 1983 - 29 Sep. 1984

R. J. WURTMAN 12 Jun. 1985 13 p
(Contract AF-AFOSR-0366-83)
(AD-A160274; AFOSR-85-0742TR) Avail: NTIS HC A02/MF A01 CSCL 06A

An experimental system using rat caudate slices was used to measure the effects of tyrosine on neuronal activity. Studies demonstrated the importance of adequate tyrosine in sustaining dopamine release and provide the first evidence that when sufficient experimental tyrosine is not provided, its level within catecholaminergic nerve terminals actually declines. The data suggest that when a group of such neurons undergoes sustained activity, its requirements for tyrosine increase dramatically. In such circumstances, normal levels of plasma tyrosine may be in adequate to sustain function. Author (GRA)

HEMATOPOIESIS IN CONVENTIONAL MICE AFTER WOUND TRAUMA

G. D. LEDNEY, L. K. STEEL, H. M. GELSTON, JR., W. E. JACKSON, III, and E. D. EXUM 1985 5 p
(AD-A160436; AFRRI-SR85-23) Avail: NTIS HC A02/MF A01 CSCL 06E

Macrophages, granulocytes, and platelets serve in wound debridement, bacterial neutralization, and homeostasis. Replacement of such cells may involve perturbations in the clonogenic cell populations responsible for replenishing specific adult cell populations. For example, the human blood granulocyte progenitor cell compartment is increased following abdominal hysterectomy. In mice, skin wound trauma produced changes in the proliferative cell compartments of the hematopoietic tissues 24 hrs after injury. In this study we report: (1)some of our findings on the hematopoietic clonogenic cell changes in conventional mice after trauma, and (2) circulating substances which may mediate these changes. GRA

(AD-A159996) Avail: NTIS HC A02/MF A01 CSCL 06A

In this reporting period we have continued to characterize monoclonal antibodies against ADhE-DFP. We have focused attention three monoclonals of interest. These are the V-16 antibody described in our previous report and two additional antibodies designated V-18 and D11B. The V-16 antibody demonstrates higher activity against AChE-DFP conjugate than against AChE alone. The V-18 and D11B antibodies showed higher activity against AChE than against the conjugate. In addition, the D11B antibody blocks AChE enzymatic activity in the Elman assay. Further study showed that these antibodies exhibit a different response to AChE-DFP conjugates on the basis that the AChE ages or loses and isopropoxy residue. The resulting phosphate diester has a charge, at normal pH, on oxygen. GRA

POTENTIAL FOR CROSS-REACTIVE PROTECTION USING PEPTIDES AND ADJUVANTS OR CARRIER MOLECULES Annual Report, 1 May 1984 - 30 Apr. 1985

F. A. ENNIS 1 Oct. 1985 8 p
(Contract N00014-83-K-0357; RR0-401)
(AD-A160360) Avail: NTIS HC A02/MF A01 CSCL 06E

We have demonstrated that a conserved portion of the HA2 subunit on the influenza virus hemagglutinin can induce a cytotoxic T lymphocyte response. This is a major development since it raises the possibility that this type of peptide could be used to provide protection that would be cross-reactive among influenza virus strains. The peptide we used was produced in E. coli using recombinant DNA techniques for the expression of segments of influenza viral genome. The molecule which stimulates this H-2 restricted cytotoxic T lymphocyte response is a fusion protein of the HA2 subunit of H1 virus (A/PR/8/34 H1N1), and the induced lymphocytes kill target cells infected with strains of influenza A virus possessing the H1 hemagglutinin irregardless of the years isolated (e.g. 1934, 1978), the results indicate that the HA2 subunit is a candidate for cross-reactive protection because there are substantial published data indicating that influenza virus induced cytotoxic T lymphocytes (Tc) are protective in challenged recipients. CSCL 06S

Forty-one chinchillas, divided into seven groups, were exposed to 1, 10, or 100 noise impulses having peak intensities of 131 dB, 135 dB, 139 dB or 147 dB. Hearing thresholds were measured in each animal prior to exposure using an avoidance conditioning procedure. Threshold shifts were monitored at regular intervals over a 30 day postexposure period. A surface preparation of the cochlear sensory epithelia was performed approximately 90 days after exposure. There was generally an orderly relaxation between the amount of permanent threshold shift and the severity of exposure, and a general agreement between averaged histological data and the audiometric data. Detailed relations between temporary and permanent threshold shift, cochlear pathology, and exposure variables are discussed, as are the implications of these data to the development of exposure criteria. All tabulated individual animal data, averaged group data, and individual cochleograms are presented in Appendixes A through D. GRA

A literature survey of life sciences, biomedical sciences, and behavioral sciences in the U.S.S.R. is presented. Some areas covered are agrotechnology, biochemistry, biophysics, biotechnology, environmental protection, epidemiology, food technology, genetics, human factors and immunology. Other areas are laser effects, medicine, microbiology, pharmacology and toxicology, physiology, public health and radiation biology.

CHARACTERISTICS OF EFFECTS OF MICROBIOLOGICAL MEANS OF PLANT PROTECTION ON ORGANISM
I. A. IVANOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 1-9 2 Jan. 1986 refs Transl. into ENGLISH from Izvestiya Akademii Nauk Latviyskoy SSR (Riga, USSR), no. 6, Jun. 1985 p 76-81
Avail: NTIS HC A06

The microbiological method of combatting pests is very promising, which is explained by the ever growing interest in it in many countries. Nevertheless, before permitting the use of microbiological agents, it is necessary to thoroughly study the characteristics of microorganisms artificially introduced into the environment. Therefore, studying the effects of biological means of protecting agricultural crops on man and warm blooded animals is of scientific and practical interest. This emphasizes the importance of the correct approach to normalizing microbe preparations, which is of great importance not only from the point of view of hygiene and occupational pathology, but also of environmental protection. These effects of microorganisms on man and the environment are studied. Author

In nature, enzymes function primarily in complex ensembles involving lipids, proteins, polysacchardies and other molecular components in solutions in which water is not the only dominant component. Enzyme catalysis therefore occurs in a microheterogeneous medium in which water acts as a regulator, determining the supermolecular structure of the catalytic reactor. Possible experimental methods of modeling the enzyme functions under such conditions are discussed, with particular attention given to such systems as proteolipid complexes and enzymes in organic solvents solubilized with phospholipids or detergents. The tasks of micellar enzymology are formulated and its relationship to membranology is discussed. The tasks include the study of the catalytic properties of solubilized enzymes as a function of degree of hydration; use of natural lipids as micelle forming components, allowing study of the mechanisms of regulation of lipid dependent enzymes; study of the interaction of enzymes in substrates insoluble in water; investigation of the dynamics of enzyme processes under conditions such that the substrate is distributed between water and organic solvents; study of cryoenzymatic processes occurring below the freezing point of water; and modeling of elementary biomembrane structure fragments with hydrated associations of protein and amphiphilic compound molecules. In recent times researchers have displayed a great interest in the possibility of using porphyrins for the diagnosis and photoradiation therapy of malignant neoplasmas. At the same time, there is great optimism regarding the use of hydrophilic porphyrins also. In order to devise effective methods of photoradiation therapy, it is necessary to investigate the mechanism of the photosensitized forms of cell damage. One of the basic targets of such damage is the cell membrane. The structural-functional changes in the erythrocyte membrane were studied by irradiating a suspension of erythrocyte shadows with red laser light in the presence of the hydrophilic porphyrin methyl-tetra(n-sulfophenyl)porphin. The photodamage to the lipids was determined from the accumulation of the products of their peroxidation. The photodamage to the proteins from the formation of crosslinks of the polypeptide membranes. The photodamage to the functional properties of the membrane was evaluated on the basis of the reduction of their permeability barrier, and by the inhibition of the transportation of glucose and pyruvate. COVALENT CROSSLINKS BETWEEN FILAMENTS IN DNA INDUCED BY LASER Abstract Only
G. B. ZAVILGELSKIY, G. G. GURZADYAN, and D. N. NIKOGOSYAN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 58 2 Jan. 1986 Transl. into ENGLISH from Biofizika (Moscow, USSR), v. 30, no. 4, Jul. - Aug. 1985 p 568-570
Avail: NTIS HC A06

A study was made of the formation of covalent crosslinks and local denatured sectors in DNA under the influence of picosecond pulses of UV laser radiation. The kinetics of formation of these

defects were studied by a fluorescent method using acridine orange dye, which forms complexes with DNA. Radiation at 266 nm was used with a pulse repetition frequency of 0.3 Hz, pulse length 30 ps, intensity 10 to the 11th power to 10 to the 14th power W/sq m. The molecular weight of the phage C DNA used in the studies was about 4 X 10 to the 7th power daltons, diluted in the phosphate buffer pH 7.2 to a concentration of 15 micrograms/ml. The quantum yield of crosslinks is about 1.0 X .000001 over the entire range of intensities of -.1 to 10 to the 11th power W/sq m. At intensities of over 10 to the 11th power sq m. the quantum yield of crosslinks increases by an order of magnitude, to 1.0 X .00001 at 4.10 to the 13th power W/sq m. Author

CANADIAN MEDICAL EXPERIMENTS ON SHUTTLE FLIGHT 41-G
D. G. D. WATT (McGill University, Montreal, Canada), K. E. MONEY, R. L. BONDAR, R. B. THIRSK, M. GARNEAU (National Research Council of Canada, Space Technology Program Office, Ottawa) et al. (CASI, Canadian Conference on Astronautics, 3rd, Ottawa, Canada, Apr. 23, 24, 1985) Canadian Aeronautics and Space Journal (ISSN 0008-2821), vol. 31, Sept. 1985, p. 215-226. Research supported by the Medical Research Council, National Research Council of Canada, Department of National Defence, and NASA. refs

During the 41-G mission, two payload specialist astronauts took part in six Canadian medical experiments designed to measure how the human nervous system adapts to weightlessness, and how this might contribute to space motion sickness. Similar tests conducted pre-flight provided base-line data, and post-flight experiments examined re-adaptation to the ground. No changes were detected in the vestibulo-ocular reflex during this 8-day mission. Pronounced proprioceptive illusions were experienced, especially immediately post-flight. Tactile acuity was normal in the fingers and toes, but the ability to judge limb position was degraded. Estimates of the locations of familiar targets were grossly distorted in the absence of vision. There were no differences in taste thresholds or olfaction. Despite pre-flight tests showing unusual susceptibility to motion sickness, the Canadian payload specialist turned out to be less susceptible than normal on-orbit. Re-adaptation to the normal gravity environment occurred within the first day after landing. Author

MEDICAL CONTROL OF THE AIRCREW DURING A RETRAINING PROCESS [MEDITSINSKOE OBESPECHENIE POLETOV V PROTSESSE PEREUCHIVANIIA LETCHIKOV]
V. I. ZORILE and V. N. IGNATKIN Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Sept. 1985, p. 51-54. In Russian.

The process of retraining aircrews for operating new aircraft and combat equipment includes three stages: the preparatory, the learning, and the assimilation stages. Various elements of the preparatory and learning stages of retraining, including physical and psychophysiological criteria used in personnel selection, and the psychophysiological and physical preparatory regimens, are discussed. Special consideration is given to monitoring newly appearing preflight reactions (elevations in heart beat and respiration rates or body temperature), some of which might point to an oncoming disease or to nonadherence to the preflight regimen. The assimilation stage of the retraining process is characterized by steadily increasing rate in acquiring new sensorimotor habits, but this stage also requires continuous maintenance of the preflight and rest regimens. The length of periods between two flights is important: long (7-10 days) interruptions have a detrimental effect on the assimilation process. I.S.

METHODS OF REGULATING THE ADAPTATION AND RESISTANCE PROCESSES IN NAVY PERSONNEL [PUTI I SPOSOBY UPRAVLENIIA ADAPTATSIONNYM PROTSESSOM I REZISTENTNOST'IU ORGANIZMA MORIAKOV]
V. S. NOVIKOV Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Sept. 1985, p. 54-56. In Russian. refs

Three methods designed to raise the adaptability and resistance of an organism to stressful situations are described. The training method includes nonspecific and specific regimens. While the nonspecific regimen is designed to improve the subject's homeostasis by exercise, enhanced vitamin intakes and other means, the specific regimen consists in exposing the subject to gradually increasing doses of stress situations analogous to the ones that he is trained for. The pharmacological method involves drug-induced changes in the central nervous system, raising the resistance thresholds to particular stressors. Finally, the psychological method is aimed at training the will-power, increasing motivation level, and developing the sense of meaningfulness of the stress-producing activity. I.S.

HUMAN PHYSIOLOGICAL ADAPTATION TO EXTENDED SPACE FLIGHT AND ITS IMPLICATIONS FOR SPACE STATION
F. A. KUTYNA (GE Management and Technical Services Co., Houston, TX) and W. H. SHUMATE (NASA, Johnson Space Center, Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 8 p. refs
(Contract NAS9-17133)
(SAE PAPER 851311)

Current work evaluating short-term space flight physiological data on the homeostatic changes due to weightlessness is presented as a means of anticipating Space Station long-term effects. An integrated systems analysis of current data shows a vestibulo-sensory adaptation within days; a loss of body mass, fluids, and electrolytes, stabilizing in a month; and a loss in red cell mass over a month. But bone demineralization which did not level off is seen as the biggest concern. Computer algorithms have been developed to simulate the human adaptation to weightlessness. So far these paradigms have been backed up by flight data and it is hoped that they will provide valuable information for future Space Station design. A series of explanatory schematics is attached. R.R.

A86-23503
HEALTH MAINTENANCE AND HUMAN PRODUCTIVITY IN THE SPACE STATION ERA
R. M. FARRELL AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 7 p. refs
(SAE PAPER 85-1312)

Health maintenance points for extended stays in space are presented, with emphasis on efectively and efficiently minimizing cardiovascular and musculoskeletal adaptations to weightlessness while maximizing the individual's productivity. Simulation of 1-g forces as provided by the Soviet 'penguin' constant-loading suit does not prevent the cardiovascular deconditining resulting from the shift of blood and lymph from the lower to the upper half of the body. Alleviation of such a shift of fluids is accomplished by the lower body negative pressure (LBNP) apparatus used for this purpose aboard Skylab. An ambulator LBNP suite is being developed to enable multiple use of the astronaut's time. Examples are given of devices for cardiovascular conditioning (the zero-g bicycle ergometer and the zero-g treadmill) and for larger muscle group conditioning (skiing and climbing simulators) for projected Space Station design. To minimize boredom as a negative psychological factor in conditioning, the development of zero-g

sports using existing equipment is envisioned. A comprehensive diagram on Space Station elements affecting productivity is included. R.R.

PHYSIOLOGICAL CONSIDERATIONS FOR EVA IN THE SPACE STATION ERA
D. J. HORRIGAN, JR., J. M. WALIGORA, and D. S. NACHTWEY (NASA, Johnson Space Center, Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 7 p. refs
(SAE PAPER 851313)

The physiological parameters that will affect EMU design and operational scheduling for the Space Station Program are discussed. The system must be designed to safely and effectively handle the increased frequency of extravehicular activity projected for longer flight periods than in the past. In order to minimize the risk of decompression sickness a proper combination of equilibration time to cabin pressure, suit pressure, and prebreathing denitrogenation, is necessary. Effective thermal exchange is projected to be automatically controlled and to have an 8-hr 1000 BTU/hr capability. Physiological changes due to adaptation to weightlessness must be considered in scheduling for their impact on performance/fatigue and in coping with motion sickness. Radiation protection to the limit of 80 rad/quarter must be achieved by scheduling to avoid periodic proton and solar flare exposure, and by additional EMU shielding. Additional EMU considerations are the control of microorganisms and the higher pressure requirement for emergency O2 purge. R.R.

TISSUE GAS BUBBLE DYNAMICS DURING HYPOBARIC EXPOSURES
M. GERNHARDT (Oceaneering International, Inc., Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 9 p. refs
(SAE PAPER 851337)

A mathematical model has been developed which describes the growth of an extravascular gas bubble in hyper and hypobaric environments. The model accounts for diffusion of inert gas across the tissue/bubble interface, tissue elasticity, gas solubility and diffusivity, surface tension and a perfusion limited inert gas transport to the tissue. Using this model, the dynamics of bubble growth can be predicted over a wide range of complex hypobaric exposures including decompressions and recompressions. The model can also account for oxygen breathing and switching inert gases during the exposure phase. Author

MATHEMATICAL MODELS OF THE EFFECT OF GRAVITATION ON LUNG FUNCTIONS [MATEMATICHESKIE MODELI DEISTVIIA GRAVITATSII NA FUNKTSII LEGKIKH]
A. I. DIACHENKO and V. G. SHABELNIKOV Moscow, Izdatel'stvo Nauka (Problemy Kosmicheskoi Biologii. Volume 51), 1985, 280 p. In Russian. refs

Theoretical conceptions and experimental data underlying the mathematical description of human lung functions are systematically described. Detailed attention is given to the derivation of equations of lung gas exchange, respiratory biomechanics, gas mixing in the respiratory pathways, the distribution of inhaled air, and blood flow between lung sections. The mathematical models obtained are used to analyze the effect of changes in gravity, posture, and other dynamic factors on ventilation, blood circulation, and gas exchange. Particular emphasis is placed on the regional irregularity and dynamics of the lung function. B.J.

ABSORPTION OF MILLIMETER WAVES BY HUMAN BEINGS AND ITS BIOLOGICAL IMPLICATIONS
O. P. GANDHI and A. RIAZI (Utah, University, Salt Lake City) IEEE Transactions on Microwave Theory and Techniques (ISSN 0018-9480), vol. MTT-34, Feb. 1986, p. 228-235. USAF-supported research. refs

Aspects of the biological implications of millimeter wave radiation for human beings are discussed. The power densities likely to be encountered close to radiators in the 30-300 GHz frequency band are examined. The millimeter wave absorption efficiency of the human body with and without clothing is described, and the possibility of 90-95 percent coupling efficiency with clothing acting as an impedance matching transformer is addressed. The possibility of very high rates of energy deposition in the skin due to submillimeter depths of penetration is considered. The potential effect of millimeter wave absorption on human eyes, with particular emphasis on the cornea, in which high rates of energy deposition are encountered, are discussed. Hearing sensations produced by millimeter waves and thermal sensations by millimeter wave irradiation are addressed. C.D.

CLINICAL AND PSYCHOLOGICAL SURVEILLANCE OF STUDENT PILOTS AT THE BEGINNING OF TRAINING [LA SURVEILLANCE CLINIQUE ET PSYCHOLOGIQUE DES ELEVES-PILOTES EN ECOLE DE DEBUT]
G. DESMARIS (Armee de l'Air, Base Aerienne 709, France) and J. PLESANT (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 207-212. In French.

The physical and psychological observations which flight surgeons must make of students at the schools for military pilots during training are outlined. The students, in addition to classroom instruction, ground training and flight training, are evaluated for aptitudes for the various branches of the French Air Force in which they will serve, whether helicopter, transport of fighter aircraft duty. The motivation level of each student is assessed, and the flight surgeons must monitor the psychological evolution of the students as they go through flight training, especially in high performance jets. The majority of students who wash out do so in the early days, either voluntarily, because of medical reasons or because they do not display the skills or appreciation of flight safety required. The latter is of particular importance during formation flying. Some of the students are temporarily suspended if they have colds which affect their Eustachian tubes, a condition which calls for automatic grounding. A particular responsibility that the flight surgeon has is to recommend temporary grounding to offset fatigue, although the student may be apprehensive of interrupting a scheduled flight test. M.S.K.

A86-24502
CLINICAL PROBLEMS ENCOUNTERED BY A SQUADRON FLIGHT SURGEON [PROBLEMES CLINIQUES POSES PAR LA MEDECINE D'ESCADRE DE CHASSE]
O. MONTAUT (Armee de l'Air, Base Aerienne 112, Reims, France) (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 212-214. In French.

The primary mission of a flight surgeon is to recognize clinical symptoms which, when exhibited by pilots, may compromise flight safety. Symptoms are more readily observed if the doctor increases the number of person-to-person contacts with pilots outside of the infirmary. It is the doctor who may be able to note certain symptoms which can lead to treatment which will permit a pilot to keep flying. A case study is noted wherein a pilot who crashed over Chad walked out of the desert. Later, he became subject to anxiety attacks so intense while flying that only an intense effort of the will would allow him to retain control of his hands. A period of several months rest, with some medications, was sufficient to allow a return to flight duty. A further service during Operation Manta is described, wherein the doctor provided extensive lessons to pilots regarding the avoidance of numerous tropical diseases, any of which could have rendered them unfit for flight duty. In any case, the doctor can formulate and articulate a course of action which will be acceptable to the pilot and to the commandant. M.S.K.

A86-24503
CLINICAL PROBLEMS POSED BY THE MEDICAL SURVEILLANCE OF PILOTS EXPOSED TO HIGH LEVELS OF ACCELERATION [PROBLEMES CLINIQUES POSES PAR LA SURVEILLANCE MEDICALE DES PILOTES SOUMIS ADES ACCELERATIONS ELEVEES]
(Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 215-220. In French.

The speed and maneuverability of modern jet fighters exposes pilots to g-forces which exceed the envelope of human endurance. The accelerations occur in linear, radial, angular and combined forms. Their effects are progressive as acceleration increases, moving from heaviness of the limbs and head to grey vision, to loss of vision, and finally to loss of consciousness. The debilities are accompanied by tachycardia, ECG anomalies and modification of the breathing rate. Beyond 5.5 g's the heart cannot pump sufficient blood to the brain, leading to unconsciousness if the acceleration lasts long enough. Anti-g suits that exert pressure on the lower extremities somewhat ameliorate the problem by forcing blood to the brain. However, fighters such as the Mirage can withstand 9 g turning loads in maneuvers, e.g., to avoid IR-seeking air-to-air missiles. As has been found with the F-16 pilots, high-g maneuvers can physically harm the pilot through hyperextension of the neck. The flight surgeon's role is to assist in developing new anti-g protection methods and to monitor pilot health, particularly to ensure that fatigue effects do not exacerbate the dangers of high-g flying. Teaching the M1, M2 and L1 maneuvers is also beneficial, especially if a centrifuge is available so that each pilot can determine which techniques are effective and perfect their implementation. M.S.K.

A86-24504
OPHTHALMOLOGICAL PROBLEMS LINKED TO HELICOPTER FLIGHT [PROBLEMES OPHTALMOLOGIQUES LIES AU VOL SUR HELICOPTERE]
Y. RODALLEC (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 221-225. In French. refs

Military helicopter pilots flying low-level missions encounter dangers from obstacles and power lines, along with visual hallucinations due to fatigue or myopia. Corrective lenses can ameliorate the myopia in daylight, but pilots selected for night flight should not be subject to the refractive problems caused by myopia. The vibrational environment of helicopter flight causes lesions in the retinae of pilots. Also, the diet of helicopter pilots in training is usually nutritionally deficient and meals are eaten hurriedly to meet schedules, occasionally leading to hypertension and/or diabetes, both of which can cause degenerative ocular lesions and myopia. It is necessary, therefore, to throughly examine pilot candidates to detect those who will not be fit for flight duty in the future. Some drugs enhance the production of visual purple and retard vision fading, and wearing red glasses aids in night vision adaptation. Protective lenses can also shield against the vision loss from bright lights and explosions, although layered lenses can also multiply the number of photons which reach the eye to enhance night vision. It may be better for the pilot to watch the desired scenes on a CRT. Wearing an apparatus which transmits IR images increases night vision, provided that sufficient training is given to correctly perceive relief. Several vision-enhancing techniques which may be used in the future are discussed. M.S.K.

A86-24505
A NEW TEST OF THE COLOR VISION OF PROFESSIONALS [UN NOUVEAU TEST DE CAPACITE CHROMATIQUE PROFESSIONNELLE]
P. J. MANENT, M. MAILLE, and J. C. BALLION (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 225-228. In French.

Military technical personnel, whether pilots, mariners or technicians must have a minimal amount of color vision for discerning, e.g., among the images on a display screen or among color-coded wires. The two standard tests used for French military personnel do not last sufficiently long and are not thorough enough to determine if candidate personnel possess the capacities for distinguishing among the colors which are germane to the professions for which they are training. A new test is described which satisfies the requirement. Standard military Telecom 112 PVC pairs cable contains 10 differently-colored wires wrapped in black PVC protection. Technician candidates with partial color blindness are required to identify the colored wires twice in random order. The technique was tested using subjects known to have five different types of red-green color blindness. The examiner observed closely to determine if the subjects hesitated at all in identifying individual colors. The test proved an effective means for determining if the candidates were capable of specific types of work, thus allowing some candidates to proceed on to the training of their choice. M.S.K.

GOUTEYRON (Hopital d'Instruction des Armees Dominique Larrey, Versailles, France) et al. (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 233-237. In French. refs

Statistical data are given for the diagnosis and prognosis of 110 sole cold thyroid nodules removed surgically from the necks of 140 military and civilian pilots. The nodules were discovered

over a period of 6 years by neck examinations of the pilots during routine physical examinations. Subsequent identification of the condition was done through thyroid scintography. Of the 110 nodules removed, 3 (2.72 percent) proved cancerous. The detection of the nodules removes the pilots from flight duty. After successful surgery, the pilots return to restricted duty until no evidence of cancer is found in return visits, at which time they return to full flight fitness. If cancer is found, then the pilots cannot fly until the condition is found to not return after repeated visits. M.S.K.

GASTRIC AND DUODENAL ULCERS AND THE FLIGHT FITNESS OF PILOTS [LA MALADIE ULCEREUSE GASTRO-DUODENALE ET L'APTITUDE DANS LE PERSONNEL NAVIGANT]
J. P. BURLATON, J. P. GOURBAT, N. GUERMAZI, G. LEGUAY, and A. SEIGNEURIC (Hopital d'Instruction des Armees Dominique Larrey, Versailles, France) (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 239-243. In French. refs

The medical view of the effects of gastric and duodenal ulcers (GDU) on the flight fitness of pilots is discussed. Statistical studies have shown that the frequency of occurrence in pilots is equivalent to that of the general population. Only two cases of GDU have led to a medically ordered removal from flight duty in the past 24 years in France. For civilian pilots applying for a license, a year must have elapsed since reporting any symptoms from a GDU. Military pilots cannot fly with a GDU condition or detection of any precursor conditions of a GDU. However, it is noted that military pilots often return to flight duty before a year has passed with no symptoms of GDU. The normal sequence of treatment of ulcers and reexaminations to ensure that healing is progressing is traced, noting that it is often a psychologist's judgment that determines when a patient is cured because it is anxiety which is most responsible for the onset and continuance of GDU. Pharmacological approaches to treating GDU are described, along with surgical intervention to close the lesions accompanying the disease.

ISCHEMIC CARDIOPATHOLOGY IN PILOTS - THE RISK, THE METHODS OF DETECTION AND PREVENTION [CARDIOPATHIES ISCHEMIQUES ET PERSONNEL NAVIGANT - RISQUE, MOYENS DE DEPISTAGE ET DE PREVENTION]
A. G. DIDIER, H. P. ILLE, N. D. ALLEGRINI, C. M. MAUREL, and C. M. THOMAS (Centre Principal d'Expertise Medicale du Personnel Navigant, Paris, France) (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 246-250. In French. refs

Cardiac ischemia is a principal cause of death in humans over 40 years of age and a principal reason for removing pilots from flight duty. The rate of ocurrence among French military pilots over the period 1982-84 was 4.3/1000, less than the rate of occurrence in the general population. The main symptoms are anginal pain, infarctions and death. A 2 year study done of 1080 military pilots over 39 years old covered such factors such as smoking, systolic arterial pressure, cholesterol level and the severity of diabetes. The study was performed to identify, if possible, the risk of ischemia relative to the conditions monitored. A numerical model derived from the data showed that the risk of ischemia is related to the magnitudes of each of the assumed predisposing conditions. The data, when compared to the population of pilots studied, indicates that 5 percent of the population was a risk of an ischemic attack in the following year. However, the duration of the study is not considered sufficient to make truly quantitative predictions. M.S.K.

MECHANICAL SOLID VIBRATIONS [LES VIBRATIONS MECANIQUES SOLIDIENNES]
J. POIRIER (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 255-263. In French. refs

The physics of mechanical vibrations and their effects on the human body are discussed. There are four types of vibrations: sinusoidal, periodic, random and transitory. They are described terms of frequency, amplitude, displacement, acceleration and variations. In a vehicle, vibrations impart longitudinal, transversal and lateral accelerations to the human body, which can be considered as three primitive masses in a mass-spring system: the head, thorax and the lower extremities. Each primitive mass has a separate resonance frequency, as does the heart (4-8 Hz). The perception of vibration is dependent on numerous factors, and the speed and amplitude of vibrations determine whether or not and where, given individual variations, damage may be done to the human exposed to the vibrations. Various symptoms and debilities that can be caused by vibrations are identified and discussed, along with treatments to either cure or ameliorate the physical effects. M.S.K.

PROTEINURIA IN FIGHTER PILOTS AFTER HIGH +GZ EXPOSURE
H. NODDELAND, K. MYHRE, H. T. ANDERSEN (Institute of Aviation Medicine, Oslo, Norway), and U. I. BALLDIN (Karolinska Institutet; Forvarets Forskningsanstalt, Stockholm, Sweden) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 122-125. refs

Exposure to high gravitational forces acting along the body axis towards the feet (+Gz) causes considerable strain on several organ systems, including the kidneys. During +Gz tolerance studies without anti-G suits, significant amounts of protein and hyaline casts were found in 17 of 20 fighter pilots after centrifugation. The G load alternated between 3.5 and 5.5 G. Mean time in the centrifuge was 15 min. For comparison another group of 19 fighter pilots is examined after air combat maneuver training with anti-G suits. None showed proteinuria. The proteinuria most likely indicates a severely depressed renal blood flow during centrifugation.

AROUSAL AND STABILITY - THE EFFECTS OF FIVE NEW SYMPATHOMIMETIC DRUGS SUGGEST A NEW PRINCIPLE FOR THE PREVENTION OF SPACE MOTION SICKNESS
R. L. KOHL (NASA, Johnson Space Center; Universities Space Research Association, Houston, TX), D. S. CALKINS (NASA, Johnson Space Center; Technology Inc., Houston, TX), and A. J. MANDELL (California, University, La Jolla) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 137-143. refs

Sympathomimetic agents are frequent components in antimotion-sickness drug combinations because of their usefulness in counteracting the sedation caused by stressful motion or resulting from the administration of other antimotion-sickness drugs. The noradrenergic neurochemistry of the brain's arousal-attentional systems prompted us to evaluate the efficacy of five new sympathomimetic drugs and to further define the role of arousal in susceptibility to motion. Subjects were orally administered methamphetamine (20 mg), phenmetrazine (25 mg), phentermine

(37.5 mg), methylphenidate (20 mg), or pemoline (75 mg) 2 h prior to taking a Staircase Profile Test. All of the drugs increased resistance to stressful coriolis stimulation by 80-120 percent. Methylphenidate and pemoline showed fewer side effects. These findings, interpreted in conjunction with the documented inefficacy of most anticholinergic and antihistaminergic drugs tested to date, suggest that sympathomimetic drugs or a generalized state of arousal can inhibit the development of motion sickness. ON THE USE OF A BUBBLE FORMATION MODEL TO CALCULATE DIVING TABLES
D. E. YOUNT and D. C. HOFFMAN (Hawaii, University, Honolulu) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 149-156. Research sponsored by the University of Hawaii. refs
(Contract NOAA-NA-81AAD00070)

The development of a set of air diving tables from a varying-permeability model (VPM) is examined. The computational algorithm and nucleation parameters for the calculation of the diving tables are described. The computed values are compared with tables from the US and British Navies; decompression profiles, no-stop thresholds, saturation dives, and total ascent times are evaluated. It is observed that the current diving tables show irregularities; however, the tables developed with the VPM are self-consistent, and are accurately interpolated and extrapolated. I.F.

ORTHOSTATIC TOLERANCE OF NORMAL INDIANS AND THOSE WITH SUSPECTED ABNORMAL CARDIOVASCULAR REFLEX STATUS
M. B. DIKSHIT, P. K. BANERJEE, and P. L. N. RAO (Indian Air Force, Institute of Aviation Medicine, Bangalore, India) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 168-173. refs

There were 143 healthy Indian males subjected to 70 deg head-up tilt for 20 min on 166 occasions to evaluate their cardiovascular response. They responded with a significant rise in heart rate, diastolic pressure, and mean arterial pressure. Pulse pressure fell significantly. Heart rate and diastolic pressure during the tilt were significantly (p less than 0.05) and positively correlated to the height of the subjects. None of the subjects had syncope, which has been reported in normal individuals elsewhere. Of the 57 subjects with suspected abnormality of the cardiovascular reflex status, who were also investigated by the tilt test, 13 (22.8 percent) developed various degrees of orthostatic intolerance. Of these 13 subjects, 10 had had syncope in the past. In view of these observations, it is concluded that 70 deg head-up tilt is an important clinicophysiological investigation in the assessment of subjects with a suspected abnormality of their cardiovascular reflex status. ANABOLIC STEROIDS AS A COUNTERMEASURE AGAINST BONE DEMINERALIZATION DURING SPACE FLIGHT
P. C. STEPANIAK, J. J. FURST, and D. WOODARD (Wright State University, Dayton, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 174-178. refs

The bone mineral content, hormonal, and histological changes which were observed on Apollo, Skylab, and Salyut/Soyuz flights, and in-laboratory experiments are described. The uses of dietary modifications, exercise programs, and pharmacologic preparations to stabilize bones and prevent the mobilization of Ca, in order to facilitate long term space habitation, are discussed. The influences of anabolic steroids on the retention of N, Ca, and P are analyzed; the negative effects of anabolic drugs are studied. I.F.

VISUAL DISTORTION - THE CORRELATION MODEL
R. S. KENNEDY (Essex Corp., Orlando, FL), K. S. BERBAUM (Iowa, University, Iowa City), and L. H. FRANK (Virginia Polytechnic Institute and State University, Blacksburg) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 189-194. refs
(SAE PAPER 841595)

The perceptual conflict theory states that any stimulus which causes a decorrelation of sensory channels initiates the firing of the chemoreceptor trigger zone, causing the appearance of motion sickness symptoms. A correlation version of the cue conflict theory is presented, together with the working assumptions with respect to perception conflict and the principles involved in the adaptation process. The elements of conflict, salience, and adaptation are discussed in the framework of the correlation model. The model is then applied to the phenomenon of visual distortion. Finally, a neural correlation process is suggested, in which the cerebellum acts as an executor and coordinator of the neurons involved in the correlation process. I.S.

The Ophthalmology Branch, at the USAF School of Aerospace Medicine, has initiated a program to extensively study night visual performance. Some of the objectives of this program are to develop a simple, rapid, and accurate night vision screening device; establish norms for flying personnel; evaluate training and enhancement techniques; determine the effects of various nutrients and drugs; and investigate image-intensifying devices--i.e., night vision goggles (NVG). An additional objective is to update the educational level of USAF flight surgeons, base optometrists, and ophthamologists about the aeromedical aspects of night vision and the new NVG technology. This manual was designed to provide useful information to the medical personnels that provide direct support to operational units. GRA

The tumorigencities of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dye were tested in the SENCAR Mouse Skin Bioassay System. The Diesel Fuel-2 gave a significant tumor response when tested as a tumor promoter but negative results when tested as a complete carcinogen. There were no tumor responses to either the Red or Violet Smoke Dyes when tested as complete carcinogens. Although a few tumors occurred in the Red and

Violet Smoke Dye tumor initiation studies, the response was not significantly different from that of the controls. GRA

EYE MOVEMENTS AND SPATIAL PATTERN VISION Annual Report, 1 Feb. 1984 - 31 Jan. 1985
L. E. AREND 28 Feb. 1985 25 p
(Contract F49620-83-C-0052)
(AD-A160408; AFOSR-85-0741TR) Avail: NTIS HC A02/MF A01 CSCL 06P

Low contrast, low spatial frequency luminance sawtooth patterns look like luminance staircases, with no brightness changes over the shallower luminance slope. Brightness measurements at corresponding points in different cycles of these patterns showed substantial illusory brightness differences. Other measurements showed that the illusion is not confined to strictly subthreshold luminance gradients, but occur with slightly suprathreshold gradients as well. In models which attempt to explain these illusions the visual system integrates over the thresholded gradient of the stimulus distribution. The integration encounters problems due to curl introduced by the nonlinear threshold operator. Brightness measurements indicated that these problems have a visual counterpart, further support for the models. Several new illusions were found to result from this nonlinear threshold for spatial gradient. Inconsistencies in the spatial integrals performed by the visual system result in multistable brightness perceptions for some patterns. GRA

PRACTICAL APPLICATION OF BASIC RESEARCH ON IMPULSE NOISE HAZARD Final Report
G. R. PRICE Jan. 1985 12 p
(AD-A160432; HEL-TM-1-85) Avail: NTIS HC A02/MF A01 CSCL 06S

To assess impulse noise hazard accurately, procedures should be based on the physiological mechanisms underlying hearing loss. Information from basic research studies is relevant in three areas. First, there is a spectrally dependent critical level above which loss mechanisms change from amode that is probably metabolically based to one that is mechanically based. Stimulation at and above this second mode should be avoided. Second, in spite of the regulatory trend ignoring the time pattern of stimulation, studies continue to indicate at that intermittency ameliorates the effect of noise, producing less effect for a given amount of energy in the exposure. Lastly, a variety of sources can be interpreted as indicating that meters designed to rate hazard should have: a rise-time capability in the vicinity of 20 microseconds; a dynamic range of over 100 dB; and employ a frequency weighting function such as A-weighting, although the shape is not critical due to the relatively sharp tuning of the ear and the generally flat noise spectra commonly encountered in the work place. PREDICTION MODELING OF PHYSIOLOGICAL RESPONSES AND HUMAN PERFORMANCE IN THE HEAT
K. B. PANDOLF, L. A. STROSCHEIN, L. L. DROLET, R. R. GONZALEZ, and M. N. SAWKA Sep. 1985 29 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A160513; USARIEM-M-1/86) Avail: NTIS HC A03/MF A01 CSCL 06S

Over the last two decades, the Military Ergonomics Division of the US Army Research Institute of Environmental Medicine has been establishing the data base and developing a series of predictive equations for deep body temperature, heart rate and sweat loss responses of clothed soldiers performing physical work at various environmental extremes. This document describes the attempt to program these predictive equations on various desk top and hand held calculators with the express purpose of developing a comprehensive heat stress model for predicting soldier performance to work, clothing and the environment. This model deals with the interaction of various multi-disciplinary factors such as: (1) the theoretical physics of heat transfer, (2) the biophysics of clothing, (3) the physiology of metabolic heat production, distribution and elimination, and (4) related meteorological considerations. The primary physiological inputs are deep body (rectal) temperature and sweat loss while the predicted outputs are the expected physical work-rest cycle, the maximum single physical work time if appropriate, and the associated water requirements. This document presents the mathematical basis employed in the development of the various individual predictive equations of our heat stress model. In addition, our current heat stress prediction model as programmed on the HP 41 CV is discussed from the standpoint of proprietary in meeting the Army's needs and therefore assisting in military mission accomplishment. THE BEGINNINGS OF AIRBORNE WEIGHTLESSNESS RESEARCH Final Report
H. J. VONBECKH Jan. 1985 67 p
(AD-A160575; NADC-85016-60) Avail: NTIS HC A04/MF A01 CSCL 06S

After World War II an increasing number of aeromedical investigators became interested in the medical problems of space flight, particularly its most challenging aspect: weightlessness. Until 1950 their efforts remained limited to theoretical deliberations and predictions. Beginning in the early fifties, however, researchers began actively to experiment with weightlessness aboard aircraft in vertical diving flights and later by flying Keplerian parabolic trajectories. H.J. von Beckh made the first weightlessness experiments in aircraft with humans and test animals (water turtles) which were published at the 4th International Astronautical Congress in Zurich and in the Journal of Aviation Medicine. Von Beckh's experiments showed that the subjects during weightlessness had by no means a strong fall reflex, as predicted by Haber and Gerathewohl in their theoretical paper, in which they evoked the Weber-Fechner Law. The disorientation and lack of neuromuscular coordination occurs only in the first seconds of weightlessness. Later, the control of the vision sense makes aiming movement possible. The incidence of motion sickness was moderate in the weightlessness flights with the Fighter aircraft Fiat G55 and the F 94 C, because the subjects were tied down in the seat and avoided head movements. Later, in the flights with the cargo aircraft C 131, the incidence was considerably higher, because the subjects could move freely and were even allowed to make somersaults, In a later paper (1959) von Beckh showed that weightlessness decreases the acceleration tolerance. This was reconfirmed many years later when the astronauts suffered orthostatic hypotension after their return to the Earth. GRA

FACTORS WHICH ALTER HUMAN PHYSIOLOGICAL RESPONSES DURING EXERCISE-HEAT ACCLIMATION
K. B. PANDOLF, M. N. SAWKA, and Y. SHAPIRO Sep. 1985 22 p
(AD-A160580; USARIEM-M-41/85) Avail: NTIS HC A02/MF A01 CSCL 06N

Researchers generally agree that high aerobic fitness achieved through physical training will reduce the physiological strain to exercise in the heat, but does not replace the benefits of an exercise-heat acclimation program. In addition, high aerobic fitness is hypothesized as a major factor in the small decay and rapid re-acclimation of individuals after they ceased exercising in hot environments. However, recent work from our laboratory suggests that improved aerobic fitness by physical training must be associated with significant elevations in core temperature during the training process in order to improve exercise-heat tolerance. Two recent studies comparing men and women with similar aerobic fitness indicate no major physiological differences between genders in both humid and dry heat for cardiovascular and thermoregulatory responses to these environments either before or after acclimation.

Our laboratory has reported that after exercise-heat acclimation under wet conditions (mild or hot), females tolerate the heat in a more efficient fashion than males while under hot-dry conditions males seem to be at some physiological advantage. Even fewer studies are reported which evaluate physiological differences in heat tolerance to exercise in relation to age. In general, exercise-heat tolerance is reduced in pre-pubertal children (boys and girls) and older adults (men and women) compared to young men and women. However, aerobically fit older adults seem to have far fewer decrements in the performance of exercise in the heat than less fit older adults. GRA

DNA AND PROTEIN STUDIES OF HLA CLASS 2 MOLECULES: THEIR RELATIONSHIP TO T CELL RECOGNITION
M. SEGALL, J. S. CAIRNS, C. A. DAHL, J. M. CURTSINGER, and S. FREEMAN 1985 29 p
(Contract N00014-85-K-0004; PHS-AM-31342)
(AD-A160704) Avail: NTIS HC A03/MF A01 CSCL 06A

The HLA-D region, encoding class 2 antigens, was first defined based on studies of mixed leukocyte culture (MLC) (Bain, et al. 1964; Bach and Hirschhorn, 1964). In our studies with colleagues (Amos and Bach, 1968; Bach et al., 1969), we were able to suggest that a genetic region encoding molecules that stimulate proliferation in MLC may be linked to, but separate from, the HLA-A and -B loci, i.e., a region such as HLA-D; definitive studies in this regard (Yunis and Amos, 1971) established the existence of the HLA-D region. Great advances have been made in our understanding of this region in recent years utilizing both the tools of molecular genetics and studies of proteins encoded by HLA-D genes. A critical bridge that has not yet been completed concerns the relationship of class II genes and protein products to determinants recognized by T lymphocytes, i.e., the cells responding in MLC. Although the emphasis in this review will be on studies of proteins and of DNA, an introduction to this article also includes our current state of knowledge regarding definition of class II products with T lymphocytes. The inclusion in this volume of several articles on the same topic allows a measure of comfort with such an approach. GRA

GLUCOCORTICOID ANTAGONISM BY ENDOTOXIN: BIOLOGICAL EFFECTS DURING STRESS AND BASIS FOR INHIBITION OF PHOSPHOENOLPYRUVATE CARBOXYKINASE M.S. Thesis
W. B. HUFF Aug. 1985 133 p
(AD-A160740; AFIT/CI/NR-85-116T) Avail: NTIS HC A07/MF A01 CSCL 06T

Bacterial endotoxins produce a variety of pathophysiologic effects by inducing the release of humoral factors from cells of the reticuloendothelial system, primarily macrophages. This study focusses on one particular factor, glucocorticoid antagonizing factor (GAF). Antagonism was augmented when mice were subjected to conditions of stress where adrenoglucocorticoids are necessary for survival. Mice were sensitized to both toxic endotoxin and irradiated detoxified endotoxin during the stress of cold, heat, and tourniquet shock. Endotoxin, as well as detoxified endotoxin, induced the release of GAF from cells of the RES, Treatment of mice with this GAF-rich serum also resulted in their sensitization to stress. Survival of LPS-poisoned animals subjected to stress could be improved when exogenous hydrocortisone was given prior to the administration of exogenous GAF-rich serum or prior to the release of endogenous GAF in response to endotoxin. Naloxone, a B-endorphin antagonist, failed to increase the survival rate of animals under the experimental conditions investigated. GRA

PLATELET-ENDOTHELIAL FUNCTION IN RELATION TO ENVIRONMENTAL TEMPERATURE Final Report, 1 May 1982 - 1 Mar. 1984
S. P. BRUTTIG, G. D. DRAPER, and M. P. HAMLET Mar. 1984 28 p
(Contract DA PROJ. 3E1-61101-BS-10)
(AD-A160744; USARIEM-T-6/84) Avail: NTIS HC A03/MF A01 CSCL 06E

Thromboembolic phenomena are commonly observed in frostbite injury to the microvasculature. Large blood vessel endothelium was used to assess any alterations in platelet-endothelial interaction resulting from low environmental temperatures. Media from bovine endothelial cells (37, 24, 4C) did not cause or enhance platelet aggregation. Yet ADP (120 micrometers) stimulated aggregation of all platelet samples. Bovine and porcine endothelial cells were incubated at 37, 24, 4, and 0.5 C with homologous platelets suspended in Tyrodes at 37, 24, 4, and 0.5 C with homologous platelets suspended in Tyrodes buffer plus albumin, and the rate of ADP-stimulated platelet aggregation was compared with control platelets. Bovine venous endothelial cells (at 37 C) inhibited platelet aggregation more strongly than aortic endothelial cells. This inhibition was blocked by aspirin (7 mM) and was independent of environmental temperature. Porcine endothelial cells also inhibited platelet aggregation. This inhibition (maximal at 37 C) was significantly attenuated by temperatures or = 24 C. A significant loss of inhibition of platelet aggregation could lower the threshold at which parenchymally-derived nucleotides or other substances from damaged cells can cause aggregation. Thus, in porcine endothelial cells bovine endothelial cells, a possible mechanism for the thromboembolic action of cold is suggested. Author (GRA)

AN EXPERIMENTAL TRIAL TO TEST THE EFFICACY OF TEMAZEPAM TO INDUCE SLEEP AND IMPROVE SUBSEQUENT PERFORMANCE DURING PARTIAL SLEEP DEPRIVATION AND CIRCADIAN RHYTHM DESYNCHRONOSIS M.S. Thesis
J. E. MCGHEE Jun. 1985 58 p
(AD-A160795; AFIT/CI/NR-85-126T) Avail: NTIS HC A04/MF A01 CSCL 06O

This thesis presents a strategy for reducing jet lag induced performance degradations by resetting rhythms during prolonged rapid transmeridian flight is studied. Thirty-four aircrew member passengers on a C-141 flight were given temazepam or placebo during the flight from Oklahoma to Saudi Arabia for induction of sleep in a period compatible with sleep cycle at the destination, but out-of-sync with previous patterns set at home station, Mental performance and circadian rhythm patterns were tested per-flight, inflight and post-flight by several measurements including a computerized performance battery. The results indicated that in the temazepam group performance was improved to near baseline levels. The restorative power of temazepam induced sleep during a period of partial sleep deprivation and temazepam's ability to reset circadian rhythms prior to arrival in the new time zone were demonstrated. GRA

N86-18973# Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.

A STUDY OF THE FLIGHT ENVIRONMENT COMPONENT OF AIRCREW FATIGUE IN STUDENT NAVIGATORS M.S. Thesis

D. R. DOUVILLE Jun. 1985 66 p

(AD-A160796; AFIT/CI/NR-85-128T) Avail: NTIS HC A04/MF A01 CSCL 06S

One approach to understanding the causes of aircrew fatigue is to devide them into: (1) those related to the unique demands of aircrew tasks or workload, and (2) those related to the unique environment of flight. The pilot not only has to navigate, make radio calls and negotiate instrument landings, but he must do it all in a noisy, vibrating, constantly moving environment. Most studies in aircrew fatigue focus on the workload part of the equation. The study described in this proposal is an attempt to define that part of aircrew fatigue which is due to the flight environment. It also attempts to determine changes in body chemistry produced by the flight environment which might be associated with aircrew fatigue. Navigator students in training at Mather Air Force Base, California fly training missions of similar duration and quality in T-43 aircraft and ground simulators. The difference in fatigue and body chemistries after flights in these two settings represent that which is due to the difference in environments. Using student navigators as subjects, blood samples would be taken before and after: (1) a five hour T-43 (Boeing 737) flight, and (2) a five hour ground simulator mission. Changes in a panel of 26 blood chemistries (including plasma osmolality and carboxyhemoglobin) for each setting would be compared for significant differences. Fatigue would be assessed in each setting using: (1) a subjective fatigue questionnaire, (2) hours of sleep following the mission, and (3) performance (academaic score). GRA

N86-18974# Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.

SOME NONOCCUPATIONAL ASPECTS OF SENSORINEURAL LOSS OF HEARING ACUITY: A PROPOSED DESIGN FOR STUDY M.S. Thesis

T. VARLEY Jun. 1985 42 p

(AD-A160799; AFIT/CI/NR 85-127T) Avail: NTIS HC A03/MF A01 CSCL 06S

Although the adverse effects of occupationally associated noise on hearing have been well documented, review of the recent literature revealed few studies which have carefully measured the role of nonoccupational loud sound in sensorineural hearing loss. This thesis will measure the strength of association of sensorineural deafness and avocational noise by calculating the odds ratio in a case-comparison design. The prevalence of avocational loud noise activities of a group of 200 cases diagnosed as having sensorineural deafness at retirement from the United States Air Force will be compared with the prevalence of avocational loud noise activities of a group of nondeaf Air Force retirees who have been matched for age, service occupation, family history of hearing loss, personal history of hearing loss and known causes of otic dysfunction. Limitations of the study and anticipated results are discussed. GRA

N86-18975# Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.

A PROPOSAL FOR A LONGITUDINAL STUDY TO ASSESS THE HAZARDS OF RADIATION IN SPACE FLIGHT M.S. Thesis

G. I. REEVES Jun. 1985 47 p

(AD-A160801; AFIT/CI/NR-85-125T) Avail: NTIS HC A03/MF A01 CSCL 06E

This thesis involves the establishment of a registry of all United States astronuats, past and future, plus nonastronaut controls. The registry will record the incidences of malignant neoplastic disease and diabetes mellitus, and the space radiation exposure received. Data will be carefully analyzed to see if there is a dose-related increase in these diseases related to the exposure to ionizing radiation, with an eventual goal of establishing reliable risk estimates related to dose received. The history of cancer related to radiation exposure is summarized, and the space radiation environment briefly described. Physiological changes accompanying space flight and their potential effects on radiation tolerance and carcinogenesis are discussed. The reasons why data from animal experiments and human occupational, medical, and nuclear weapon exposure cannot be extrapolated to the long term health risks of astronauts are discussed at length, and the study instruments for establishing a long term descriptive surveillance study are described. Author (GRA)

A MODEL OF INHALED GAS AND VAPOR TRANSPORT IN THE HUMAN LUNG Ph.D. Thesis

M. L. SHELLEY 1985 134 p

(AD-A160829; AFIT/CI/NR-85-143D) Avail: NTIS HC A07/MF A01 CSCL 06P

The transport of inhaled gas or vapor in the human lung is theoretically modeled to determine the fraction of inhaled gas or vapor absorbed through the bronchial walls in the conductive zone and the fraction entering alveolated space and undergoing blood/gas exchange. An iterative-analytical approach is used, rather than a numerical one, to generate a large amount of data over a wide range of gas or vapor solubilities and diffusivities. The model applies to gases or vapors of low solubility. Simple analytical expressions are fitted to model results, expressing fractional bronchial absorption and alveolar uptake in terms of gas or vapor solubility and diffusivity. Typical physiological parameters are assumed and only physical properties of the gas or vapor are required for input. Methods are presented which allow estimation of these input values. GRA

REVIEW OF DUODENAL AND GASTRIC ULCER Final Report

F. C. GARLAND and E. D. GORHAM Mar. 1985 23 p

(AD-A160919; NAVHLTHRSCHC-85-9) Avail: NTIS HC A02/MF A01 CSCL 06E

Duodenal and gastric ulcer are chronic often recurring conditions that in the past were grouped together as peptic ulcer. Many diverse environmental and genetic factors, which create an imbalance between secretion of acid and pepsin by the stomach and the resistance of the gastrointestinal mucosa may lead to the development of a duodenal or gastric ulcer. Incidence trends and risk factors for these two diseases are different. Reported mortality and hospitalization rates declined markedly for duodenal ulcer from 1970 to 1978, but remained relatively stable for gastric ulcer over the same time period. Recent changes in treatment and diagnosis may account for much of this decline. Several environmental factors associated with duodenal or gastric ulcer have been identified. The principal risk factor for duodenal ulcer is cigarette smoking. Less certain associations with diet, emotional stress, coffee consumption, and occupation have also been reported. Risk of gastric ulcer is also increased by cigarette smoking. Aspirin use, however, is the strongest reported rick factor for gastric ulcer. Uncertain associations between gastric ulcer and alcohol consumption have also been reported. Separate familiar aggregation of duodenal and gastric ulcer indicates that genetic mechanisms leading to the development of these diseases are also distinct. Inheritance patterns for hyperpepsinogenemia I, the Zollinger-Ellison syndrome and several other genetic conditions predisposing to the development of either duodenal or gastric ulcer have been described. If both the time course of the arterial plasma radionuclide concentration and the brain tissue radionuclide concentrations are known, it is possible to calculate the kinetic constants (k1*, k2*, k3*, k4*) of the glucose analogue. In a series of male subjects, arterial blood samples were obtained at frequent intervals immediately following the bolus administration of F-18-FDG and then at less frequent intervals for up to 5 hours after the radionuclide administration. The tissue time course was obtained by making positron emission tomographic scans every three minutes for 30 minutes and then at less frequent intervals for 5 hours. These images were used to construct the time course of (18)F activity in gray and white matter structures. Using these values for the lumped constants and the kinetic constants, the values obtained for the global metabolic rate for glucose in two series of young male subjects were 4.99 + or - 0.23 and 5.55 + or - 0.37 mg/100 g/min when C-11-DG and F-18-FDG were used as tracers respectively. FLUORESCENT-POLARIZATION PROPERTIES OF CHROMOPHORES OF WATER-SOLUBLE PROTEINS OF NORMAL AND CATARACTAL HUMAN LENS
T. V. BIRICH, N. I. POZNYAK, N. A. PROKOSHINA, and S. N. CHERENKEVICH *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 21-24 2 Jan. 1986 refs Transl. into ENGLISH from Doklady Akademii Nauk BSSR (Minsk, USSR), v. 29, no. 8, Aug. 1985 p 757-759
Avail: NTIS HC A06

The fluorescent properties, including the lifetime of the excited state of the molecules and the degree of polarization of fluorescence of the water soluble proteins of the normal and cataractal human lens cortex and nucleus are studied. The water soluble fraction of the proteins of the lens cortex and nucleus obtained after homogenization in physiological solution and subsequent centrifuging at 6000 g for 20 min. was also studied. All the studies were done at room temperature. The spectral fluorescent properties including the fluorescence lifetime and polarization of water soluble cortex and nucleus proteins are found to be different in normal and cataractal human lenses. The origin of chromophores which are emitted in the visible spectral range and the modification of protein structure are associated with the formation of intra- and intermolecular covalent bonds in proteins.

ELEMENT ANALYSIS OF SCLEROTIC FORMATIONS OF MAJOR BLOOD VESSELS BY LASER MASS SPECTROMETRY Abstract Only
G. G. ARABIDZE, S. M. BURKITBAYEV, Y. A. BYKOVSKIY, A. I. KUTSENKO, I. D. LAPTEV, E. A. MANYKIN, Y. A. PETRENKO, and V. T. TIMOSHIN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 29 2 Jan. 1986 Transl. into ENGLISH from Biofizika (Moscow, USSR), v. 30, no. 4, Jul. - Aug. 1985 p 655-660
Avail: NTIS HC A06

The element and isotope composition as well as changes in natural propagation of isotopes of elements in sclerotic (plaque) formations developing on the walls of the blood vessels in atherosclerosis is studied by laser mass spectrometry. Sections of sclerotic arteries in various stages of development of atherosclerosis were studied. Before placement in the ion source chamber, the specimens were dewatered with 10% formalin solution and by exposure to various concentration of tartaric acid, then dried at 37 C and atmospheric pressure. Experiments showed that atherosclerotic plaque consists of 12 to 16 elements. The total content of isotopes of the macrocomponents was determined mathematically. Significant changes in the content of trace elements were observed in various stages of vascular damage, anomalous disorders in the natural distribution of isotopes of oxygen, silicon, magnesium and calcium were observed in various stages on the development of atherosclerosis. CLINICO-EPIDEMIOLOGICAL CHARACTERISTICS OF Q FEVER IN CARPATHIAN FOOTHILLS
A. A. SUKHOPYATKINA, O. S. BAT, A. V. LEVITSKAYA, and V. G. POTAPOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 34-36 2 Jan. 1986 refs Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, April 1985 p 80-81
Avail: NTIS HC A06

The polymorphism and relative lack of severity of the clinical course of Q fever, as well as the multiplicity of ways of its transmission, lead to a situation in which this disease can go unrecognized. In connection with this, deeper study of the characteristics of its epidemiology are making it possible to establish the presence of natural and anthropurgic foci of this infection. The epidemiological investigation of Q fever was begun in 1975 and have continued to study the infection of the population. In 1975 blood serum from 216 individuals was studied in a complement fixation test with Coxiella burnetii, with negative results. In 1976, 2.1 percent of those examined were found to have a complement-binding antibody to C. burnetti in titers of 1:10 to 1:80. It was established that in one of the rayons of the oblast there existed an active anthropurgic focus of Q fever, manifested by group illness of the personnel working on dairy farms. The source of the infection for people was cattle, and the main method of transmission of the infection was aerogenic. A higher rate of infection by Q fever was observed among workers in livestock raising farms and meat combines. Author

Avail: NTIS HC A06

The events of the last decade have shown that under conditions of mass vaccination various regions of our country record isolated cases and outbreaks of poliomyelitis. A thorough description has been made of a period of epidemic increase in the rate of poliomyelitis in Sverdlovsk in 1969 to 1972, when epidemiological,

virological, and serological methods were used to establish the polio virus etiology of most of the cases of paretic diseases. Some conclusions reached because of this monitoring are: (1) under conditions of mass vaccination, sporadic cases of poliomyelitis can be observed among inoculated children; (2) development of a program of epidemiological supervision of poliomyelitis for each administrative region has been proven necessary; and (3) epidemiological supervision of poliomyelitis should provide for early and complete discovery of all cases of the infection, regardless of the severity of the illness, analysis of the quality of vaccination, and determination of the immune status of the population of children and the characteristics of circulation of polio viruses. Avail: NTIS HC A06

It is shown that the new concentrated chromatographically-pure (CCP) vaccine against tick borne encephalitis (TBE) had moderate reactivity in doses of 0.5 and 1 ml. A direct relationship was established between the frequency and intensity of postvaccination reactions of the vaccinated individuals and the dose. The highest indices of reactivity in individuals treated with CCP vaccine were noted after the first vaccination. CCP vaccine has high antigenic activity: virus-neutralizing antibodies are found in twice vaccinated individuals in 97 to 100% and antigen agglutinations in 75 and 91% respectively. This vaccine should be used for primary vaccination against TBE using two 0.5 ml injections 6 months apart. Author

EXHIBITS CONCERNING SPARING MEDICINE AT ZDRAVOOKHRANENIYE-85 AT MOSCOW Abstract Only
Y. PONARINA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 59-60 2 Jan. 1986 Transl. into ENGLISH from Sotsialisticheskaya Industriya (Moscow, USSR), 3 Aug. 1985 p 4
Avail: NTIS HC A06

Exhibits concerning sparing therapy, displayed in Moscow, are listed and described briefly. The Delta-102 relieves pain without use of other analgesics by preventing pain impulses from entering the brain and by inciting release of endorphin. Akma magnets are helpful in alleviating migraine, toothache, sciatica, insomnia and can be used to assist efforts to stop smoking. The patients themselves fasten the magnets to acupuncture points. The Ritm EKG device takes readings from 64 points rather than the usual six and the data obtained are processed and displayed automatically. The comprehensive, automatic, republic system for mass physical examinations Kasmon employs electronic devices to allow one physician and 10 nurses to examine 13,000 patients. The Kardiolayn device can be used to monitor physical parameters of patients after release by their physician. Other exhibits demonstrated surgical procedures employed to perform unique eye surgery procedures, the use of plasma jet scalpels and a method of kidney stone treatment by shock waves in which the patient is subjected to shock waves after precise location of the stone and immersion in water. A noninvasive thermovisual method was used to detect thermal reaction in the occitoparietal area of human brain cortex to stimulation of the eye with light from a photostimulator. The temporal, spatial, and temperature characteristics of the thermal effect were obtained by use of the AGA-780 thermoviser connected to a computer system. Possible mechanisms of the interrelationship between the visual stimuli and the thermal reaction of the human brain are discussed. I.S.

Avail: NTIS HC A06

The problems of study the neurophysiological processes taking place during visual perception are discussed, including the methods used and the results obtained. The effects of visual stimuli on neuronal impulses and evoked potentials were registered in patients during functional diagnoses with the use of implanted electrodes. It was demonstrated that the processes of visual perception induce neuronal activity in the nuclei of the thalamus and striopallidal system. The nature of these reactions depends on the type of activity initiated by the visual stimuli. A system of psychological tests is proposed for the analysis of characteristic responses in the human brain to somatosensory features of visual stimuli. I.S.

RESPIRATORY FUNCTION IN INHABITANTS OF NORTHEASTERN USSR Abstract Only
L. N. MATVEYEV, A. G. MARACHEV, A. N. KOZIN, S. A. KHARKOV, and I. Z. SHERES *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 77-78 2 Jan. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 4, Jul. - Aug. 1985 p 634-640
Avail: NTIS HC A06

Respiratory function analysis was conducted on 246 inhabitants of northeastern USSR with a mean stay of 9.40 + or - 0.43 years in the region, and 90 newcomers to the area from Moscow. The study groups consisted of both men and women with an

average age for the cohort of 31.4 + or - 0.51 years. The long term residents of the Northeast presented with inferior pulmonary function status in comparison with the newcomers, the deterioration consisting predominantly of inferior gas-exchange parameters and reduction by a third in pulmonary reserve. Maximum gas exchange after 15 years in the northeast was reduced by 45.4% below that seen for the newcomers, and by 27.6% in comparison with immigrants with a 5 year stay. The corresponding reductions in the pulmonary reserve capacity were 45.4 and 20.3%, respectively. The morphological basis of respiratory deterioration in the long term residents of the Soviet northeast was ascribed to marked hypertrophy and hyperplasia of the seromucous glands and the increase in the percentage of goblet cells. EFFECTS OF 24 H SLEEP DEPRIVATION ON BIOGENIC AMINE METABOLISM Abstract Only
T. D. BOLSHSKOVA, S. A. MESHCHERYAKOVA, V. F. TYABENKOVA, N. I. ROMANOVA, Y. I. LEVIN, and I. G. DALLAKYAN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 78-79 2 Jan. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 4, Jul. - Aug. 1985 p 652-656
Avail: NTIS HC A06

An analysis was conducted on the effects of 24 h sleep deprivation on the metabolism of catecholamines, histamine and serotonin and the completion of recovery after a night's sleep. Measurements of the blood and urine levels of the metabolites in question were conducted on ten healthy males ranging in age from 22 to 27 years. Sleep deprivation of the specified duration resulted in enhanced production and secretion of the biogenic amines, as evidence by elevated urinary levels. In addition, psychological tests during that time showed a positive correlation between changes in the metabolism of the biogenic amines and behavioral performance. Comparison of blood and urine levels demonstrated that the latter status provided a more reliable indication of histamine status. It was also noteworthy that serotonin levels were most refractory to recovery after sleep deprivation, and the connection between depressed levels of serotonin and mental depression after repeated bouts of sleeplessness appears to establish a direct metabolic relationship. VISUAL FORM PERCEPTION FROM HALFTONE IMAGES Abstract Only
A. M. KUPERMAN and A. B. KRAVTSOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 79 2 Jan. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 4, Jul. - Aug. 1985 p 687-689
Avail: NTIS HC A06

Two subjects were employed in an experiment designed to test visual form perception from halftone images and evaluate the importance of orientation selective mechanisms in this function. Analysis of the resultant data indicated that the threshold time limit for perception of the volume parameter from halftone images is on the order of 70 to 180 msec, and depends on the mutal orientation of the test and masking meshwork stimuli to one another. The latency increases with orthogonal orientation. The data were interpreted to indicate that orientational and spatial frequency selective mechanisms are involved in surface form perception from halftone images. These mechanisms can be differentiated into local factors involving evaluation of intensity gradient of the test image, i.e., orientation of the normal to the surface, and nonlocal factors concerned with analysis of contour boundary characteristics. PROBLEM OF BIOLOGICAL CLOCKS: NEW DATA ON CIRCADIAN CHANGES IN STATUS OF HUMAN ORGANISM Abstract Only
L. Y. GLYBIN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-001) p 80 2 Jan. 1986 Transl. into ENGLISH from Biofizika (Moscow, USSR), v. 30, no. 4, Jul. - Aug. 1985 p 717-720
Avail: NTIS HC A06

A possible biochemical mechanism has been suggested for endogenous intracellular clocks, suggesting that the biological clock is not a simple two phase day and night clock, but rather a more complex sequence of circadian changes. Results are summarized in a statistical analysis of the circadian rhythm of processes of morbidity, childbirth, domestic injury, traffic accidents and death due to certain diseases. The major result is that various physiological indices of the human body change during the course of the day in a quite complex manner with a regular sequence of phases of increased and decreased intensity of the processes studied. The picture was found to be the same in terms of local time regardless of season of year, latitude or location. Five periods of elevated physiological tone were observed (at 5-6, 11-12, 16-17, 20-21 and 24-1 o'clock) with an equal number of decreases (at 2-3, 9-10, 14-15, 18-19 and 22-23 o'clock). Author

ENHANCEMENT OF SOMNIFEROUS EFFECTS OF THERMAL PULSATION BY SIMULTANEOUS APPLICATION TO TWO REFLEXOGENIC ZONES Abstract Only
V. A. LIKHTENSHTEYN and T. M. MUGUTDINOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (PRS-UBB-86-001) p 80 2 Jan. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 4, Jul. - Aug. 1985 p 689-691
Avail: NTIS HC A06

The somniferous effectiveness of simultaneous application of thermal pulses of two reflexogenic zones was tested on 33 healthy young adults, and compared with the results obtained when only the standard zone (nasolabial) or an adjunct zone (paraumbilical abdominal area) were stimulated. Depth of induced sleep was monitored by EEG. The results demonstrated that sleep induction was most effective when the two zones were simultaneously activated by thermal pulses, with 78.8% of the subjects reaching stage 2 sleep in 9.1 min on the average. In this mode only 6.1% of the subjects failed to respond. Stimulation of only the primary nasolabial zone resulted in 60.7% of the subjects entering stage 2 sleep in 12.7 min, while 15.1% failed to respond at all. Stimulation of the paraumbilical alone was least effective, with 36.3% of the subjects failing to respond and only 20.6% reaching stage 2 in 16.8 min. Author

MUSCLE FATIGUE: PHYSIOLOGICAL AND BIOCHEMICAL STUDIES Ph.D. Thesis
J. P. TROUP 1985 139 p
Avail: Univ. Microfilms Order No. DA8516286

The purpose of this study was to examine the etiology of muscle fatigue in fast and slow skeletal muscles giving particular interest to the relationship of H + ion and muscle contractile properties. A further objective as to evaluate to what extent endurance and spring exercise training protects against the development of fatigue. Endurance exercise involved running 1.2 mph at a 15% grade 2

hours per day, 5 days per week for 10 weeks. The spring training program consisted of 6 sprints of 4.5 minute duration at 40 m.min-1 and 15% slope with 2.5 minute rest intervals performanced 5 days per week for six weeks. Muscle fatigue was produced in the predominantly type 1 Soleus, the type 2A and 2B extensor digitorum longus and the type 2B superficial region of the vastus lateralis by electrical stimulation in vitro at 22 C. Muscles were stimulated at 45 trains.min-1 for 1, 5 or 10 minutes. In both training modalities, train tension decreased faster in controls compared to the exercise trained group. This suggested that exercise training leads to a delay in the development of fatigue being most pronounced following a regimen of spring training. Dissert. Abstr.

LUMINANCE AND CHROMATICITY SIGNAL PROCESSING IN THE HUMAN VISUAL SYSTEM Ph.D. Thesis
G. R. COLE 1985 154 p
Avail: Univ. Microfilms Order No. DA8520180

Luminance (Lum) and Chromatic (Chr) detection mechanisms were revealed with a 1 deg 200 ms test flash presented upon a uniform 6.2 deg yellow field of 3000 td. The test could have any direction in the (L,M) cone quantal catch space. All stimulus components were narrow-band, produced with a 8-channel Maxwellian view optical system. Using pedestals which were flashed coincident in space and time with the test, subthreshold masking and facilitation was obtained for Lum tests upon Lum pedestals and Chr tests upon Chr pedestals. Further increases in the pedestal strength beyond threshold, yielded facilitation independent of the sign of the test and pedestal, followed by a Weberian rise in threshold. Suprathreshold +/- Lum pedestals facilitated the detection of +/- Chr tests (+Chr = green; -Chr = red) by 2 to 3 fold. The facilitation was still apparent for tests and pedestals which were tilted away from the nominal Chr and Lum directions respectively. The results are discussed in terms of spatio-temporal uncertainty and edge effects. Dissert. Abstr.

RESTING METABOLIC RATE IN MEN FOLLOWING PROLONGED TREADMILL EXERCISE Ph.D. Thesis
G. R. SHAW 1985 162 p
Avail: Univ. Microfilms Order No. DA8519297

Previous studies have suggested that the resting metabolic rate (RMR) may be elevated for several hours following prolonged exercise and thus contribute significantly to 24-hour energy expenditure. The metabolic responses of 8 men (4 trained runners and 4 sedentary men) were studied during and after treadmill exercise. Each subject was studied on 8 different days: 3 control days (no exercise), 3 days following 45 min of exercise, and 2 days following 90 min of exercise. The trained subjects' exercise intensities averaged 78% and 61% of their maximal oxygen consumption during the 45 min and 90 min exercise bouts, respectively. Corresponding values for the sedentary men were 57% and 46%. Oxygen consumption (VO sub 2), minute ventilation (V sub e), and heart rate (HR) gradually increased during 45 and 90 min of constant-load exercise regardless of training status It is concluded that the total post-exercise increase in energy expenditure following 45 or 90 min of treadmill exercise was at most 4 to 8% of the cost of exercise itself. Dissert. Abstr.

DIVER RESPONSE TO HOT WATER LOSS AT DEPTHS GREATER THAN 300 METERS: EXPERIMENTAL OBSERVATIONS AND THEORETICAL INTERPRETATION
E. H. WISSLER and A. PASCHE *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 7-14 Aug. 1985 refs
Avail: Issuing Activity

A mathematical model for simulating human thermal response to exercise and environmental stress is used to analyze experimental data obtained from 2 series of 350 m dives conducted in hyperbaric chambers. When divers wearing standard hot water suits were subjected to brief intervals without flow, they became uncomfortable and began to shiver within a few minutes. The physiological basis for this response and its consequences are discussed. It is concluded that nonuniform distribution of water within the suit, leakage of hot water from the suit at the wrists and ankles, and flushing of cold water into the suit around the hands and feet during a hot water cut are the primary causes of diver discomfort and shivering. A method for quantifying thermal comfort during diving was tested during diving at 5 and 40 m using suits with and without passive insulation. Calculations of the insulation of a suit system were based on measurements of changes in body temperature, mean skin temperature, respiratory heat loss, and metabolism. Metabolism was measured with a technique based on argon dilution and mass spectrometry. Insulation values in the range of 0.10 to 0 15 K/(W/sq m) are measured for the suits, and are considered by divers to yield adequate thermal comfort. Author (ESA)

A STUDY OF HUMAN LYMPHOCYTE MORPHOLOGY FROM THE PERIPHERAL CIRCULATION AFTER HYPERBARIC EXPOSURE
J. A. PACIOREK *In* Research Inst. of National Defence The 11th Annual Meeting of the Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 33-43 Aug. 1985 refs
Avail: Issuing Activity

Scanning electron microscopy preparation of peripheral blood lymphocytes obtained from divers at the end of a deep dive in whole blood or in separated mononuclear cell fractions, demonstrate membrane changes in those samples that were air dried. Critical point drying of preparations prevents lymphocyte surface morphology collapse. Membrane binding studies indicated that between 24.5% of peripheral mature B and T cells binding sites are compromised after in vitro hyperbaric treatment. In vitro comparison of pre and post pressure stressed cells shows that inappropriate decompression procedures cause damage to the cytoskeletal matrix, with topographical alteration of membrane and antigenic sites. ENHANCEMENT OF PSEUDOMONAS AERUGINOSA VIRULENCE BY HYPERBARIC ATMOSPHERE CONDITIONS
B. P. BERDAL and A. R. EEGAARD *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 45-54 Aug. 1985 refs Prepared in cooperation with Norwegian Defence Microbiological Lab., Oslo
Avail: Issuing Activity

Factors associated with Pseudomonas aeruginosa virulence (bacterial adhesion to human cells in culture, production of exotoxin A, and the activity of extracellular and cell-wall bound proteolytic enzymes) were measured under diving conditions. Toxin production remains undisturbed, but bacterial adhesion and an extracellural proteolytic, elastase-like activity increase. The enhanced adhesion associated with pressure increase is statistically significant for the assayed P. aeruginosa strains. Adhesion is much higher at 37 C than at 22 C. The hyperbaric pressure effect is significant at the higher temperature only. Observations correlate well with reports of external ear canal infections in divers and whirl-pool bathers. Enhanced bacterial adhesion under favorable atmosphere/temperature conditions could be a general phenomenon for the P. aeruginosa bacterial group.

SOME DOMINANT FREQUENCIES OF POSTURAL TREMOR ARE LOWER AT 31 BAR
D. J. HARRIS and Z. TOROK *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 55-65 Aug. 1985 refs
Avail: Issuing Activity

To test the hypothesis that the center frequencies of tremor bands are slightly lower at pressure as a consequence of slowed muscle contraction, tremor was studied during a heliox dive to 31 bar. Spectral analysis reveals that the power summed for the 6 to 13 Hz and 13 to 40 Hz bands in the finger increases 2 to 6 and 1.6 to 3.5 fold respectively, while hand tremor power increases from 1 to 6.6 fold. Center frequencies of all hand tremor peaks, (neurological and mechanical in origin) are reduced at pressure by 0.67 to 1.28 Hz. The results support the proposition that reflex and muscle factors play a role in causing or modulating tremor in the high pressure nervous syndrome.

LUNG VOLUMES AND DYNAMIC COMPLIANCE DURING IMMERSION AND OXYGEN BREATHING
R. BAER, G. O. DAHLBAECK, and U. I. BALLDIN *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 67-69 Aug. 1985 refs Prepared in cooperation with Chalmers Univ. of Technology, Goeteborg, Sweden
Avail: Issuing Activity

The pulmonary mechanics and the time course of lung vital capacity (VC) reductions during immersion and oxygen breathing were investigated using 8 healthy male scuba-divers (mean age 24 yr, range 18 to 30 yr) with body plethysmographic techniques and simultaneous esophageal pressure recordings. The reductions in VC and the symptoms of airway irritation after immersion and oxygen breathing confirm suggestions that this reduction is mainly due to pulmonary absorption atelectasis formation caused by an elevated diaphragm and blood pooling in the thorax, creating closed off basal lung regions. However, the small reductions in residual lung capacity and dynamic compliance during 30 min immersion conditions, while breathing oxygen as well as air, might be explained by an increased lung interstitial fluid interfering with the gas volumes in the lung.

EFFECTS OF DRY AND HUMIDIFIED BREATHING GAS (AIR) AT 37 C ON PULMONARY FUNCTION IN HYPERBARIC CONDITIONS
I. ROENNESTAD *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 71-79 Aug. 1985 refs
Avail: Issuing Activity

The effects of breathing humidified air were studied using 7 subjects performing a standard workload task at 1.17, 3.75, and 5.98 bar simulated depths and at the surface. Exposure to humidified breathing gas causes no change in any of the pulmonary function parameters. There are significant decreases in the pulmonary function parameters after exposure to dry breathing gas at 5.98 bar compared to 1.17 bar. At 1.17 bar mean mid expiratory flow (MMEF) is reduced to 94.5 % of the pre-exposure value, while MMEF at 5.98 bar is reduced to 77 % of the pre-exposure value. Data for humidified breathing gas at 5.98 bar are similar to those at 1.17 bar. Changes are probably due to an obstruction in the distal airways. The origin of the obstruction is unknown. It is concluded that humidification of dry breathing gas has an increasingly positive effect with depth on the pulmonary function of the diver.

LUNG RUPTURE AS A COMPLICATION IN FREE ESCAPE
C. LINDEMARK (Submarine Medical Section, Karlskrona, Sweden) and J. ADOLFSON *In its* The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 81-84 Aug. 1985 refs
Avail: Issuing Activity

In 104,200 free escapes performed by 9,253 trainess in submarine warfare, 63 cases (frequency of 0.7 %) of lung rupture were observed. Mediastinal emphysema is found in 36 of the cases and pneumothorax in 4 by X-ray examination. Symptoms to be recompressed are thoracic sensations, cerebral symptoms, unconsciousness, subcutanous emphysema, bloody frothy sputum, auscultory crepitations, submucous emphysema and shortness of breath. It is uncommon that people trained in free ascent suffer from lung rupture. It is suggested that training in free ascent in a tank with maximum possibilities of rescue is a way to avoid severe diving accidents in the open sea.

COMPARISON OF BRADYCARDIA BREATH-HOLD ON DIVERS AND NONDIVERS: ITS IMPORTANCE FOR THE CAPACITY VISIT OF DIVERS
D. LAPIERRE, F. FRIEMEL, M. P. CURRALADAS, C. LARGER, and G. CANNET *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 87-92 Aug. 1985 refs
Avail: Issuing Activity

Bradycardia during apneas with face-immersion was tested with 12 divers and 12 nondivers. No statistically significant difference between the two groups as to the average length of breath hold and the frequency of appearance of the electrocardiographic changes is found. Breathing with face immerged (FI) cardia during apnea is significant for nondivers, FI or not. For divers, bradycardia is significant only with FI. The differences in the amplitude of bradycardia between the two groups are not statistically significant. The apnea-training of divers may reduce the parasympathetic sensitivity of the heart. During the capacity visit for candidate divers, the parasympathetic response of the subject should be tested by making him carry out an apnea.

EXPLAINING THE UNEXPLAINED DYSBARIC SPORT DIVING ACCIDENTS
X. LOPEZ-ALTIMIRAS, J. PALOMER, J. BORRAS, and J. DESOLA-ALA *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 93-98 Aug. 1985
Avail: Issuing Activity

A total of 181 dysbaric sports diving accident case files were analyzed, and cases where adequate decompression procedures were followed were studied. The patients' personal data (age, physical condition, and background) diving instruction (experience and previous dysbaric disorders), the data which preceeded the dive (continued or successive dives, sailing, previous traveling) and the technical characteristics of the dive itself (exercise at depth, cold water, fatigue) were investigated. Exercise, advanced age, and negligence in applying safety factors are the reasons of the majority of the unexplained accidents. Author (ESA)

AN ATTEMPT TO COUNTERACT NITROGEN NARCOSIS BY NALOXONE ADMINISTRATION
M. H. LINER, O. EIKEN, M. GENNSER, H. ROECKERT, and H. OERNHAGEN *In its* The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 99-104 Aug. 1985 refs Prepared in cooperation with Chalmers Univ. of Technology, Goeteborg, Sweden, and Karolinska Inst., Stockholm, Swedennst. Natl. Defence
Avail: Issuing Activity

In order to evaluate the effect of naloxone (a specific opiate antagonist) on nitrogen narcosis, 8 healthy subjects were exposed to 8.5 ATA air on 2 occasions in a dry chamber. The degree of nitrogen narcosis was assessed by measurement of body sway motion, four-choice visual response time, and paced auditory serial addition test. The subjects assessed perceived degree of narcosis using the Borg category scale. Tests were performed pre and post-dive, and at bottom depth before and after drug administration. Each subject received naloxone (0.02 mg/kg bw) or placebo on separate dives. Drugs were administered intravenously in a double-blind random fashion. At 8.5 ATA performance decreases in all tests indicating nitrogen narcosis. Neither naloxone nor placebo affect performance at pressure. Results suggest that naloxone does not reverse the effects of excessive nitrogen partial pressure on body sway, and psychomotor and cognitive functions.

ELEVATIONS OF PLASMA ENDOTOXIN LEVELS AND LYSOSOMAL ENZYME ACTIVITIES IN DIVERS DURING A SIMULATED CHAMBER DIVE TO 300 MSW
D. R. DORAN, Z. TOROK (Admiralty Research Establishment, Gosport, England), M. P. GARRARD (Admiralty Research Establishment, Gosport, England), and L. CHAUDRY *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 107-112 Aug. 1985 refs Sponsored by UK Ministry of Defence Procurement Executive
Avail: Issuing Activity

Bacterial endotoxin levels were measured in blood samples taken from 3 men during a simulated chamber dive to 300 msw. Plasma concentrations rise in all 3 men from insignificant pre-dive values to reach levels 10 times the upper limit of normal by the end of compression. The elevations persist well on into the decompression phase. Significant elevations of activities of acid phosphatase and Beta glucuronidase are noted, paralleling the rise in endotoxins. Such lysosomal enzyme activity increases are known to accompany endotoxaemia. The effect of hyperbaric exposure upon the efficiency of destruction of endotoxin by the liver, and/or direct effect of compression upon leakage of endotoxin from the gut are discussed. Author (ESA)

HIGH PRESSURE OXYGEN (OHP) INDUCED INCREASE OF SERUM PROLACTIN IS NOT DUE TO A DOPAMINE (DA)-RECEPTOR BLOCKADE
G. ATHANASSENAS, R. KAISER, H. SCHLEBUSCH (Bonn Univ., West Germany), and R. BERGER *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 113-120 Aug. 1985 refs
Avail: Issuing Activity

A significant increase of serum prolactin (PRL) levels was found after breathing 100% O2 in a simulated depth of 18m, compared to normoxic breathing under the same conditions. In order to distinguish between a decrease of dopamine (DA) and a blockade of the DA post-synaptic receptor, bromocriptine (BRC) a known DA agonist, was administered in a double blind experiment. Eleven male divers participated in 4 series of simulated dives to 18 m breathing 100% O2 in 2 dives (1 with and 1 without BRC administration), and breathing a normoxic mixture in the 2 others (1 with and 1 without BRC administration). It is found that the increase of serum PRL under high pressure oxygen is suspended after BRC administration, suggesting that PRL increase is due to a decrease of DA rather than to a blockade of the post-synaptic DA receptor. EFFECTS OF INTERMITTENT EXPOSURE TO HYPEROXIA IN OPERATIONAL DIVING
W. STERK (Vriens Diving Co.) and L. M. SCHRIER *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 123-131 Aug. 1985 refs
Avail: Issuing Activity

Two groups of 6 divers were exposed to hyperoxic mixtures during 3 no-stop dives of 2 hr duration per day, interrupted by 1 hr surface intervals breathing air, 5 days per week. Group 1 was exposed to 600 cumulative pulmonary toxicity dose (CPTD) and group 2 to 800 CPTD per day. Results show a chronic oxygen toxicity syndrome consisting of symptoms as fatigue, headache, dizziness, and paraesthesia. Most characteristic is a feeling of numbness in fingers and toes. It is uncertain whether these symptoms are of central or peripheral origin. It is concluded that daily exposure to 600 CPTD or more is not safe on a working week basis and as a schedule as in the experiment.

INCREASED INOTROPI OF THE HEART IN NORMOXIC HYPERBARIC ATMOSPHERE
L. B. STUHR, A. ASK, and I. TYSSEBOTN *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 133-138 Aug. 1985 refs
Avail: Issuing Activity

Cardiac activity of rats in a hyperbaric chamber was studied. A micromanometer independent of saline filled catheters was introduced into the left ventricular heart chamber of anesthetized subjects. Intraventricular pressure and velocity of ventricular pressure increase and decrease were measured in control and during 15 min elevated ambient pressure to 5 bar by He and N2 and 15 min after decompression. The mean arterial pressure and pulse pressure were recorded by a saline filled catheter in aorta via a femoral artery. Elevated ambient pressure (5 Bar) by N2 and He in a normoxic atmosphere increases the inotropi but does not influence the chronotropi and mean arterial pressure. It is suggested that the rat heart has to use a greater force and velocity of contraction to pump the same amount of blood at 5 bar.

Twenty patients with Bell's palsy detected 7.6 days previously on average (no longer than 15 days) were treated by hyperbaric oxygen (HBO) at 2.8 bars for 60 min twice a day. A few days after the beginning of the therapy (mean 5.5. days) all but 1 improved and all but 1 healed completely in 17 to 21 days (mean 14.6). In one case decompression rather than HBO was indicated but subject having refused surgery joined oxygen treated group. At admission all patients presented complete paralysis with NET differing 3.5 mA. During therapy none of them developed signs of electrodegeneration. Comparing outcome of Bell's palsy under HBO to the one under medicamentous therapy or spontaneous evolution, HBO cases heal quicker and with no sequella. Author (ESA)

Avail: Issuing Activity

Physical examinations, blood and urine analyses, and radiological examinations of divers were completed. They were all actively diving on air. Mean age was 26.1 yr with a range of 19 to 35. The mean years of diving experience was 4.3. The average depth of diving was 35.4 m. Six divers had decompression sickness (DCS). Although aseptic bone necrosis is not found necessarily related with DCS, all cases with DCS have lesions of aseptic bone necrosis; 3 of the 21 divers are free of lesions and 4 have cystic changes and translucent areas in their coracoid process and fibula. Findings indicate a very high incidence of dysbaric osteonecrosis. Eighteen divers have lesions. Humerus is the primary site of affection. All these findings indicate that the high incidence of aseptic bone necrosis among Turkish sponge divers is related to diving habits. Author (ESA)

EARLY DETECTION AND TREATMENT OF AVASCULAR BONE NECROSIS IN DIVERS
R. M. KUIPERS, G. H. C. SCHARDIJN, D. M. A. AGENANT, C. A. HOEFNAGEL, and K. J. HAMELYNCK *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 159-164 Aug. 1985 refs
Avail: Issuing Activity

Dysbaric osteonecrosis diagnosis in divers is discussed. Four weeks after a decompression accident the first signs can be found by a diphosphonate bone-scan. An X-ray investigation is usually positive at a later stage of the disease (1 yr) but the best moment of treatment is gone. If a bone lesion is suspected on clinical examination and bone scintigraphy, further confirmation by intramedullary pressure and phlebography should be performed. In case of a high pressure and a venous stases, a core biopsy with intraossal decompression is indicated. The results of a local treatment of the necrotic part of head in early cases of femoral head necrosis are good, and less disabling than a hip arthrodesis or total hip replacement in cases of bone necrosis with secondary arthrosis. ORAL CHANGES IN DIVERS WORKING WITH ELECTRICAL EQUIPMENT UNDER WATER
T. OERTENDAHL *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 165-171 Aug. 1985 refs
Avail: Issuing Activity

An inquiry study among professional commercial divers revealed that 55% complained of a metallic taste, strictly related to their work with electrical equipment under water. A clinical study was performed to see if the metallic taste reflected any clinical alteration. Divers who worked with electrical equipment under water have a significantly more unfavorable clinical appearance of their dental amalgams, in relation to a control group. The metallic taste is probably due to potential alterations in the mouth provoked by increasing humidity in diving suits when operating electrical welding machines. Author (ESA)

In the first of two 230 m saturation dives a continuous spreading and increase of Pseudomonas aeruginosa (mainly PMA 4) was observed inside the chamber although a strict daily disinfection routine was followed. Beginning between day 3 and 5, PMA 4 is observed in all divers. Technical modifications to the water sypply system and the use of a H2O2 based disinfectant markedly improve microbiological water quality and reduce bacterial colonization of the divers in the second dive. For ear prophylaxis (5 min twice daily) 70% ethanol or AL-acetate/acetic acid was used. No case of manifest otitis externa occurs. Author (ESA)

The existence of a significant activation or stress to perform emergency procedures in water, and coping throughout dive training were studied. Pre and post activation on dives 1 and 6 were measured (5 m depth). Correlations between endocrine reactions, subjective fear rating, frequency of symptoms postdive and personality were obtained. There is a significant activation to the sea dive. However, students either really cope with the environment, or show a very large change in endocrine status. There are broad individual variations regarding coping throughout training. As found among navy divers loss of coping is related to high defense strategies. Author (ESA)

REPETITIVE DECOMPRESSION TABLES FOR NO-STOP EXCURSIONS FROM SATURATION
R. W. HAMILTON and D. J. KENYON *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 191-198 Aug. 1985 refs Sponsored by NOAA and the Dept. of Commerce
Avail: Issuing Activity

The classical gas loading method for calculating repetitive tables was used to calculate many sequences of excursions separated by various surface or habitat intervals. These were done for different excursion storage depths, vertical excursion distances, and interdive intervals. The allowable bottom time may be shorter for the second dive and even shorter for subsequent excursions. For a given depth-time combination the required adjustment is determined almost entirely by its order in the sequence and the duration of its preceeding interdive interval; the tables use these factors rather than repetitive groups. A linear interpolation method is used to account for excursions that use less than the total allowable time. Author (ESA)

AN APPRAISAL OF DIVE PROFILES IN SHELLFISH DIVERS WITH REFERENCE TO THE RISK OF DECOMPRESSION SICKNESS
I. NASHIMOTO, K. KOBAYASHI, and Y. GOTOH *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 213-219 Aug. 1985 refs
Avail: Issuing Activity

The dive profiles of six helmet shellfish divers were recorded and venous gas emboli (VGE) of divers after surfacing were monitored. Theoretical tissue nitrogen pressure (TNP) and decompression thresholds (DTHs) were calculated. Dive depth was 16 to 36 m, bottom time 16 to 36 min, and total ascent time 16 to 29 min. The first decompression stop was usually taken at 20 m, the second at 10 to 5 m. Constant fluctuations in diving depth were seen at the bottom. At each decompression stop the diver moved up and down within a range of 2 to 6 m. Grade 2 VGE is detected among 3 divers after surfacing from the second dive. No DCS is observed. With few exceptions, their empirical decompression profiles do not exceed the DTHs. This may be related to the reduced risks of DCS. Author (ESA)

THE INFLUENCE OF INDIVIDUAL FACTORS IN MAN ON BUBBLE FORMATION IN AIR DIVING DECOMPRESSION
M. CARLIOZ, M. COMET, and B. GARDETTE *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 229-239 Aug. 1985 refs
Avail: Issuing Activity

The influence of biometric factors on decompression was studied in 78 air dives of 78 male subjects at 24 m 90 min bottom time, 30 m 80 min, and 51 m 40 min. Results show that factors which influence individual susceptibility to eliminate gas as bubbles, and consequently to pathological risk, are age, weight, and fat tissue. The statistical results were extended to 133 unit air chamber dives. The correlation coefficients are: 0.45 for age, 0.32 for fat tissue, and 0.28 for weight. Thus, there is not a sole determining factor but it appears that the sum of these 3 factors (age + weight + fat tissue : $r = 0.52$) induces pathogenic bubble formation during decompression. LESS BUBBLE FORMATION IN WOMEN DIVERS
J. DESOLA-ALA and G. MASUREL *In* Research Inst. of National Defence The 11th Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine p 247-256 Aug. 1985 refs Prepared in cooperation with Direction des Constructions et Armes Navales, Toulon, France
Avail: Issuing Activity

Nine couples (1 man, 1 woman) performed identical dives at depths varying from 40 to 50 msw during enough time to produce a residual nitrogen coefficient L according to US Navy decompression tables. Circulating bubbles in the precardial region were determined immediately after the dive and every 30 min during 2.5 hr. Seven men produce detectable bubble degrees in at least one observation, while only three women do so. The men show a higher number of positive determinations and higher degrees of circulating bubbles. No correlation with individual or technical factors can be clearly signaled as responsible for these variations. It is suggested that women divers produce a less bubble degree than men, and their proneness to decompression sickness is related to other physiological factors. Author (ESA)

The combined effects of aging and environmental temperature on decompression sickness incidence in male and female rats (10, 36, and 60 weeks old) in a compression chamber pressurized with air to 11 bar in 10 min were studied. Temperature was controlled at 20 and 30 C, and freely ventilated. Following a 40 min stop at 11 bar, the rats were decompressed in stages, and fatality ratio observed. The results demonstrate a significant relationship (at 0.01%) between aging and fatality ratio; fatality ratio increases under low environmental temperature compared to high environmental temperature. There is little gender effect on fatality. Author (ESA)

CUTTING HEAD FOR ULTRASONIC LITHOTRIPSY Patent Application
E. D. ANGULUO and R. GOODFRIEND, inventors (to NASA) 30 Oct. 1985 10 p
(NASA-CASE-GSC-12944-1; NAS 1.71:GSC-12944-1; US-PATENT-APPL-SN-793006) Avail: NTIS HC A02/MF A01 CSCL 06E

A cutting head for attachment to the end of the wire probe of an ultrasonic kidney stone disintegration instrument is described. The cutting head has a plurality of circumferentially arranged teeth formed at one end thereof to provide a cup shaped receptacle for kidney stones encountered during the disintegration procedure. An integral reduced diameter collar diminishes stress points in the wire and reduce breakage thereof. NASA

GENERAL AUTOMATIC COMPONENTS OF MOTION SICKNESS
S. SUTER, W. B. TOSCANO, J. KAMIYA, and K. NAIFEH 1985 37 p refs Prepared in cooperation with California Univ., San Francisco
(Contract NCC2-115)
(NASA-CR-176516; NAS 1.26:176516) Avail: NTIS HC A03/MF A01 CSCL 06S

A body of investigations performed in support of experiments aboard the space shuttle, and designed to counteract the symptoms of Space Adapatation Syndrome, which resemble those of motion sickness on Earth is reviewed. For these supporting studies, the automatic manifestations of earth-based motion sickness was examined. Heart rate, respiration rate, finger pulse volume and basal skin resistance were measured on 127 men and women before, during and after exposure to nauseogenic rotating chair tests. Significant changes in all autonomic responses were observed across the tests. Significant differences in autonomic responses among groups divided according to motion sickness susceptibility were also observed. Results suggest that the examination of autonomic responses as an objective indicator of motion sickness malaise is warranted and may contribute to the overall understanding of the syndrome on Earth and in Space. BIOLOGICAL INVESTIGATIONS OF ADAPTIVE NETWORKS. NEURONAL CONTROL OF CONDITIONED RESPONDING Annual Technical Repor, 30 Apr. 1984 - 20 May 1985
J. W. MOORE 20 May 1985 26 p
(Contract AF-AFOSR-0215-83)
(AD-A160345; AFOSR-85-0746TR; ATR-2) Avail: NTIS HC A03/MF A01 CSCL 06P

Neurobiological investigations of adaptive neural networks were conducted using the classically conditioned nictitating membrane response (NM CR) of rabbit, a widely used model system for studies of learning. One experimental approach involved recording from single brain neurons from awake, behaving animals for the purpose of determining the loci and characteristics of neurons with activity correlated with the NM CR or its inhibition. A second approach involved the use of discrete brain lesions that selectively eliminate the NM CR while at the same time sparing the basic reflex pathway. A third approach employed fiber-tracing anatomical techniques designed to clarify the inter-connectivity among brain regions essential for the NM CR. These regions include discrete portions of the cerebellum and brain stem. Information from physiological studies has been incorporated into mathematical models of learning used by adaptive network researchers, and anatomical findings have guided the development of related neuronal models. A STUDY OF PATIENT'S SELF-IMAGE DURING ORTHODONTIC TREATMENT M.S. Thesis
B. B. JACOBUS, JR. Jun. 1985 126 p
(AD-A160751; AFIT/CI/NR-85-117T) Avail: NTIS HC A07/MF A01 CSCL 05J

There has been little research done that has attempted to study the patient's self-image and record what changes occur with a correction of the patient's malocclusion through orthodontic treatment. A study was done to determine what changes occur in the orthodontic patient's self-image during orthodontic treatment. A questionnaire requiring responses pertaining to self-image was distributed to three hundred sixty 11 to 19-year old patients in various phases of pre-treatment and retention. The data was collected and statistically analyzed. Variables of age, sex, and time in treatment were examined. Findings indicated a definite positive effect upon the orthodontic patient's self-image. Significant differences in response levels of different age groups, time in treatment groups and males and females were found. The effects

on self-image were the largest during the first year of active treatment and remained at a higher level throughout treatment. The positive self-image levels continued through the retention phase of treatment. GRA

IN VITRO COMPARISON OF ZINC PHOSPHATE AND GLASS IONOMERS ABILITY TO INHIBIT DECALCIFICATION UNDER AND ADJACENT TO ORTHODONTIC BANDS M.S. Thesis
D. J. COPENHAVER Aug. 1985 60 p
(AD-A160881; AFIT/CI/NR-85-141T) Avail: NTIS HC A04/MF A01 CSCL 06E

Forty sets of impacted third molar teeth were banded with custom fitted bands and cycled in a latic acid solution for four weeks. This solution simulates an environment that would be found only in patients with the worst oral hygiene. Each set was from the same patient. Visual, spectrophotometric and pH testing were done on the sample sets. All area not banded showed significant decalcification after four weeks in the 0.10 M latic acid solution. The teeth banded with glass ionomer cement showed significantly more calcium was present in solution in the zinc phosphate cemented sample solutions also confirmed were more Ca(++) ions in solution. The evidence suggest that glass ionomer cement protects the tooth surfaces from decalcification under and adjacent to orthodontic bands significantly better than zinc phosphate cements. Further study on solubility and setting time of this new glass ionomer cement is necessary before routine clinical use can be considered. Author (GRA)

PASSING SCORES FOR THE FAA ATCS COLOR VISION TEST
J. J. CONVEY Aug. 1985 19 p
(AD-A160889; DOT/FAA-AM-85-7) Avail: NTIS HC A02/MF A01 CSCL 06P

In response to recommendations from the Office of Personnel Management for measures of normal color vision that reflects as closely as possible the functional color vision requirements for an air traffic controller (Christup, 1981), subtests which simulated ATC tasks were developed in three content areas: (1) aircraft colors for fuselage and lights, (2) color weather radar displays, and (3) navigational chart terrain elevations. Pickrel and Convey (1983) performed an item analysis on these subtests using data obtained from 41 persons with normal color vision as determined by their performance on the Pseudoisochromatic Plates Test (PIP) from the American Optical Corporation and 22 persons with defective color vision according to the PIP. The item parameters and the internal consistency reliability estimates obtained were satisfactory. GRA

ASSESSING THE HEALTH RISKS OF CARRIER LANDINGS IN US NAVY PILOTS Interim Report
A. HOIBERG and R. G. BURR Jul. 1985 12 p
(AD-A160928; AD-F630624; NAVHLTHRSCHC-85-24) Avail: NTIS HC A02/MF A01 CSCL 01B

Landing an airplane on an aircraft carrier is one of the most demanding and complex tasks required of Navy pilots. Heart rate values in pilots increase during flight, especially during landings and launch. Because of the hazards involved, carrier landings might have an impact on the health of Navy pilots. This study was designed to determine whether or not carrier landings adversely affected the health of Navy pilots. The objective was to compare the hospitalization and mortality rates of helicopter pilots and fixed-wing pilots who had considerable carrier landing experience with a control group of pilots who had little, if any, carrier landing experience. Results of comparisons across carrier landing exposure groups revealed no significantly higher total hospitalization rate of any one of the three groups. GRA

INVESTIGATION OF THE METHOD TO DETERMINE CARBOXYHAEMOGLOBIN IN BLOOD
D. M. KANE Aug. 1985 66 p
(AD-A161061; DCIEM-85-R-32) Avail: NTIS HC A04/MF A01 CSCL 06A

The current method for determining blood carboxyhemoglobin concentration by gaschromatography has been critically evaluated and compared to spectrophotometric analysis methods. The major sources of bias in the method accuracy have been found to be in the measurement of blood volume and in the separate determination of total hemoglobin concentration in the blood. The method is estimated to have a coefficient of variation of 6.2% over the range of 0.5 to 20 vol % COHb. Standardization procedures which have been examined are the use of a 500 ppm carbon monoxide in nitrogen gas mixture and carbon monoxide-saturated blood solutions as external standards. Also, methods of saturating blood with carbon monoxide have been examined, with the use of an impinger or tonometer held at 37 C giving the most effective results. Studies of long-term storage of carbon monoxide blood have been carried out and have revealed that the concentration remains stable for up to nine days if the blood is stored anaerobically at refrigerator temperatures. Blood containing 10% or less carboxyhemoglobin has been found to be stable up to 60 days. GRA

BODY WEIGHT CHANGES BEFORE AND AFTER SUBMARINE PATROLS Interim Report
K. R. BONDI and A. N. BEARE 25 Sep. 1985 9 p
(AD-A161144; NSMRL-1062) Avail: NTIS HC A02/MF A01 CSCL 06P

Analysis of pre- and post-patrol body weight of 670 men from the crews of seven submarines showed that 32% of the men gained weight, 52% lost, and the 12% did not change. From the magnitude of individual weight losses, it was inferred that as many as a third of the men may have been actively dieting. These data do not support the widespread belief that men tend to gain weight during submarine patrols. Author (GRA)

THE ABSORPTION OF BENZENE THROUGH HUMAN SKIN
J. HANKE, T. DUTKIEWICZ, and J. PIOTROWSKI 28 Oct. 1985 22 p Transl. into ENGLISH from Medycyna Pracy (Poland), v. 12, no. 5, 1981 p 413-426
(AD-A161157; FTD-ID(RS)T-0395-85) Avail: NTIS HC A02/MF A01 CSCL 06T

As a result of the proliferation of benzene solutions in several production technologies and of leading to prolonged exposure poisonings, the question of absorption through the skin has re-emerged with respect to the direction of preventive measures and the necessity to clarify the observed clinical signs of absorption. The absorption of benzene through the skin in men in experimental conditions was examined. The liquid benzene was absorbed with the velocity about 0,4 mg/sq cm/hour; the absorption of the benzene vapors was insignificant and it did not exceed 1 per cent of that absorbed throughout the respiratory ways in the same conditions. The study was based on the determination of phenol contents in urine and on the new direct chemical method for the designation of skin absorption of benzene, this method was described in the paper. The authors concluded that the absorption of benzene through the skin must not be neglected. GRA

EXAMINATION OF RETINAL PATTERN THRESHOLD LEVELS AND THEIR POSSIBLE EFFECT ON COMPUTER ACCESS CONTROL MECHANISMS M.S. Thesis
D. K. HELLE Sep. 1985 48 p
(AD-A161213) Avail: NTIS HC A03/MF A01 CSCL 06B

The advent of multi-programming and the proliferation of shared computer systems has increased the need for greater computer security. Computer security can be segmented into six categories: physical, hardware, software, personnel, communications and procedures. Embedded into software security are those features which protect the system against both unauthorized access and denial of service of authorized users. Another term for this is access control. Access control mechanisms verify an individual's identity via three distinct methods: (1) something an individual knows, (2) something an individual possesses or (3) something about the individual. One device which keys on something about the individual is a retinal scan system. This system utilizes the retinal blood vessel pattern as a unique identifier. This thesis studies one such retinal pattern recognition device. For the purposes of this study, an experiment was designed and conducted which determined the reliability of this system as a function of various tolerance levels, as well as its applicability as a computer systems access control mechanism. The Eye Dentify 7.5 system proved to be a fairly expensive, highly reliable access control device. Its probability for false recognitions is far better than most other known devices. It can be used as a physical access device at virtually any military installation where access devices are used. GRA

EFFECT OF WORKLOAD ON THE AUDITORY EVOKED BRAINSTEM RESPONSE
K. GILLILAND (Oklahoma, University, Norman), C. SHINGLEDECKER (USAF, Workload and Ergonomics Branch, Wright-Patterson AFB, OH), G. WILSON, and K. PEIO (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 37-39. refs

The purpose of this study was to explore the effect of workload level of a grammatical reasoning task on the auditory brainstem evoked response. Ten male subjects were administered three difficulty levels of a grammatical reasoning task. Brainstem evoked responses were recorded before and after the randomly presented workload conditions, as well as during each workload condition. The results revealed a consistent increase in Wave VI latency during all workload conditions, but no apparent differentiation between workload conditions. Post-test brainstem measures revealed that latency of Wave VI did not recover to pre-test baseline levels. Author

THE EFFECTS OF SIMULATOR AND AIRCRAFT MOTION ON EYE SCAN BEHAVIOR
J. R. COMSTOCK, JR. (Old Dominion University, Norfolk, VA) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 128-132. refs
(Contract NGT-47-003-800)

In a series of three experiments on the effects on eye-scan behavior of both simuator and aircraft motion, the sensitivity of an oculometric measure to motion effects was demonstrated. 'Fixation time', defined as the time the eyes spend at a particular location before moving on (saccade) to another fixation point, was found to be sensitive to motion effects in each of the experiments conducted. The results of the present study support the hypothesis that motion serves an alerting function, providing a 'cue' or 'clue' to the pilot that 'something happened'. The results do not support the hypothesis that direction of motion is conveyed through the type of motion information employed in these experiments. Author

A86-23715
AN EVALUATION OF AVIATOR TRAINING ABILITY REQUIREMENTS SCALE RATINGS
D. M. MCANULTY and D. H. JONES (Anacapa Sciences, Inc., Fort Rucker, AL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 356-360. Army-supported research. refs

It is pointed out that the ability requirements approach to job analysis has been effectively employed in a wide range of occupational specialities. This approach is based on the premise that a job can be described in terms of abilities required to perform the tasks associated with the job. The usefulness of the ability requirements approach has been repeatedly demonstrated. A recurrent problem, however, is related to the generally low level of agreement among raters with respect to the ratings. Thus, it has been found that 16 to 25 raters must be considered to obtain average ratings which are consistent. The present paper is concerned with ability requirements analyses limited to the instrument phase of Army helicopter training. Attention is given to details regarding the method, psychometric analyses, ratings transformation and evaluation, and a factor analysis of the normalized task-ability ratings. G.R.

A86-23716
AN EXAMINATION OF ABILITY REQUIREMENTS FOR VARIOUS ROTARY WING MISSIONS
D. H. JONES and D. M. MCANULTY (Anacapa Sciences, Inc., Fort Rucker, AL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 361-365. refs

The increasing specialization of rotary wing missions and aircraft has led to a reanalysis of traditional strategies for assigning student aviators to one of four rotary wing missions, including cargo, utility, aeroscout, or attack. The present paper has the objective to present analyses of data, originally compiled by Myers et al. (1982), which suggest that ability requirements for the four missions are indistinguishable when the most demanding mission tasks are included in the basis of comparison. G.R.

A86-23717
PRODUCTIVITY AND DIFFICULTY AS NEW CRITERIA FOR VALIDATING AVIATOR SELECTION TESTS
B. D. SHIPLEY, JR. (U.S. Army, Research Institute, Fort Rucker, AL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 366-369. refs

The U.S. Army Research Institute is conducting research to improve the quality of the Army's aviator selection testing program. The research is motivated by increasing costs of training and by changing aviator ability requirements due to advanced aircraft and modern tactics. This paper describes the development of a new criterion variable to support the testing improvement research. Author

RETENTION OF HELICOPTER FLIGHT SKILLS - IS THERE A 'CRITICAL PERIOD' FOR PROFICIENCY LOSS?
J. W. RUFFNER, D. T. WICK (Anacapa Sciences, Inc., Fort Rucker, AL), and W. R. BICKLEY (U.S. Army, Research Institute, Fort Rucker, AL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 370-374. Army-supported research. refs

The maintenance of the flight proficiency of aviators represents a vital problem for Army aviation. Ruffner and Bickley (1983) conducted an investigation of the loss of helicopter contact flight skills over a six-month period during which active duty Army aviators did not fly. According to the results of this study, there was no significant loss in flight proficiency during the six-month period. The present paper reports data which extend the findings of Ruffner and Bickley to no-flying periods longer than six months. The conclusions about the retention of helicopter contact flight skills are discussed. There is little significant proficiency loss in either psychomotor or procedural tasks for as many as six months of no flying. There is a significant decrease in proficiency for aviators who have not flown for one year. The rate of proficiency loss is greater for no flying periods between six months and one year than for periods of no flying greater than one year. G.R.

A86-23719
CONSERVING INSTRUCTIONAL TRAINING RESOURCES THROUGH USE OF THE PERSONALIZED SYSTEM OF INSTRUCTION
D. T. WICK, J. W. RUFFNER (Anacapa Sciences, Inc., Fort Rucker, AL), and W. R. BICKLEY (U.S. Army, Research institute, Fort Rucker, AL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 375-378. Army-supported research.

In connection with the Individual Ready Reserve (IRR) program, a need exists to develop a training program to be used by units commanders to retrain IRR aviators effectively and efficiently. In response to this need, the Army Research Institute Field Unit developed a standardized training program designed to retrain IRR aviators following varying periods of not flying with the active Army. However, it was found, that according to this program, instructor pilots (IPs) had to spend an unacceptable large amount of time with academic portions. The present paper reports research which was undertaken to develop and to evaluate a revised program that would minimize the time IPs would have to devote to academic training. G.R.

A86-23720
USE OF A SIGNAL DETECTION PARADIGM TO ASSESS SUBJECTIVE INTERSECTION POINTS IN A TARGET LOCATION TASK
W. R. ENGELMAN, M. J. PATTERSON, and G. M. CORSO (Georgia Institute of Technology, Atlanta) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 380-382. refs

Numerous tasks require individuals to assess whether two or more moving points are on a collision path. However, evidence available, on decision making in spatial manipulation tasks, is lacking. This study attempted to assess individual's ability to determine the point of intersection between two cursors. The distance between a specified target and the actual intersection point (2 levels), and the extrapolation distance (2 levels) was varied. Using a signal detection paradigm, measures of sensitivity (d') and decision criterion (B) were obtained. Therefore, 2 x 2 within subjects design was employed. Results indicated that distance between the target and actual intersection point had the greatest effects on sensitvity, while extrapolation distance differences were minimal. Conclusions based on the results are limited due to poor subject performance. Author

A86-23721
THE DETECTION AND IDENTIFICATION OF PICTORIAL CHANGES BETWEEN SUCCESSIVE PRESENTATIONS
M. S. WOGALTER (Rice University, Houston, TX) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 388-392.

In research on picture recognition, much attention has been given to the ability to recognize a picture as identical or different from a previously presented picture. The present paper is concerned with an investigation which utilizes a task which required the processing of meaningful visual information contained in a complex scene. Then the subject is required to notice and identify a change in a subsequent examination of the scene. Three experiments are discussed. The experiments show that an advantage of additions over deletions occurred only for pattern changes and not for object changes. G.R.

A86-23722
DOES LOCATION CUEING INCREASE THE EFFICIENCY OF THE EARLY STAGES OF PERCEPTUAL PROCESSING?
L. A. ANDERSON, D. M. LANE, and J. A. KLEISS (Rice University, Houston, TX) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 393-397. refs

If the location in which a visual stimulus is to be presented is precued, the speed or accuracy of the response to the stimulus is increased. This finding has generally been taken as evidence that cueing speeds up perceptual processing at an early stage. According to Duncan (1981), who assumes two levels of processing, position cueing facililitates selection from the first level to the second level but does not affect first level processing. The present paper reports experiments which employ a logic similar to that used by Sternberg (1969) in his additive factors method to distinguish between these possibilities. The experiments employed a discrimination task in which the subjects were to determine as quickly and as accurately as possible which of two stimuli had been presented. The obtained results contradict the hypothesis that spatial cueing affects the early stages of perceptual processing. G.R.

A86-23726* Illinois Univ., Urbana.
WHY DO PERFORMANCE AND SUBJECTIVE WORKLOAD MEASURES DISSOCIATE?
Y.-Y. YEH and C. D. WICKENS (Illinois, University, Urbana) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 504-508. NASA-supported research. refs

A set of three experiments are described that examine the sources of information processing that produce a dissociation between subjective workload measures and performance. The results support a theory of the dissociation. Subjective measures are driven more by the number of tasks currently performed. Subjective measures are also less sensitive to resource competition than performance measures are. Factors that demand more resource investment improve performance, but these factors also increase subjective ratings of workload. Author

A86-23727
ACQUISITION OF PERCEPTUAL-MOTOR SKILL - ADAPTIVE AND PART-WHOLE TRAINING
A. M. MANE (Illinois, University, Urbana) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 522-526. refs

The effectiveness of two training methods was investigated in the training of a complex perceptual-motor skill. Subjects learned how to play a computer controlled video-game. In adaptive training, pacing of the game elements was the adaptive variable. In the part training condition subjects received training in four subtasks which were designed to train specific elements of the skill

necessary for the performance of the task. A comparison of training time as well as performance at fixed time points against a control group indicated that the training manipulations were effective. The part training method was clearly the best. The adaptive training method yielded mixed results. However, some support for the effectiveness of the method was observed. The results are discussed in terms of the principles for design of training devices and programs. Author

A86-23730
THE EFFECTS OF AERIAL PERSPECTIVE ON ALTITUDE ESTIMATION
M. J. PATTERSON and E. J. RINALDUCCI (Georgia Institute of Technology, Atlanta) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 542-544. refs

In the context of an increasing interest in the use of simulations as training devices for a greater variety of flight tasks, there is a need for the development of effective methodologies to evaluate the visual displays within a simulator. The cues utilized by pilots in the maintenance of altitude have been examined. One visual cue potentially available within a flight setting is related to the aerial perspective. Aerial perspective can be defined as a haze, which, due to particulates suspended in the atmosphere, attenuates hue and contrast. This phenomenon results in the blurring of subjects with increases in distance. Rock (1975) has suggested that aerial perspective may not in fact be used as an independent cue for depth. Nelson and Ritchie (1976) have studied the contribution of aerial perspective to the determination of depth. The present investigation represents an extension of the earlier studies. The results suggest that the ability to estimate altitude using different levels of aerial perspective is related to the degree of previous flight experience. G.R.

A86-23731
THE OPTIMUM PRESENTATION OF COGNITIVE TRAINING DURING A FLIGHT TRAINING PROGRAM
B. A. SMITH (Seville Training Systems Corp., Pensacola, FL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 620-624. Research supported by the Seville Training Systems Corp. refs

Four groups of subjects (N = 8 in each group) were presented training, based on the cognitive aspects of a basic flight maneuver, at different times during the acquisition of the motor skills needed to perform that maneuver. Results indicate that the performance of the group that received extensive cognitive training prior to attempting the associated motor skills was significantly better (p less than .05) than the groups that received the same cognitive training interspersed during the initial learning of the motor skills. This was true even when the interspersed training was preceded by extensive cognitive pretraining. Results also show that cognitive training interspersed with motor skill learning produced a deterioration in performance as the performance of the two groups receiving the training was below that of the control group which received no cognitive training whatsoever. Transfer of training to a similar maneuver indicated that the groups that were initially trained using extensive cognitive pretraining performed significantly better than the groups that received only interspersed cognitive training and the control group. EVENT-RELATED POTENTIAL INDICES OF WORKLOAD IN A SINGLE TASK PARADIGM
R. L. HORST, R. C. MUNSON (ARD Corp., Columbia, MD), and D. S. RUCHKIN (Maryland, University, Baltimore) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 727-731. refs
(Contract NAS1-17576)

Many previous studies of both behavioral and physiological correlates of cognitive workload have burdened subjects with a contrived secondary task in order to assess the workload of a primary task. The present study investigated event-related potential (ERP) indices of workload in a single task paradigm. Subjects monitored changing digital readouts for values that went 'out-of-bounds'. The amplitude of a long-latency positivity in the ERPs elicited by readout changes increased with the number of readouts being monitored. This effect of workload on ERPs is reported, along with plans for additional analyses to address theoretical implications. Author

OPERATOR LOADING EFFECTS IN A SIMULATED TACTICAL DECISION-MAKING PROBLEM
S. G. HUTCHINS, F. L. GREITZER, and R. T. KELLY (U.S. Navy, Personnel Research and Development Center, San Diego, CA) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 879-883. refs

The objective of this effort was to explore the nature of the degradation in performance, in a military command and control environment, when human capacity limits are exceeded. In dual-task situations, operators were able to perform a primary anti-war warfare task with little degradation but at the expense of the concurrent task. However, a distinction should be made between an operator's rate of output and the quality of performance. Few operators ever used strategies that would minimize overall threat. Thus, in high-density situations, operators may be highly productive but decidedly suboptimal. Use of decision aids in this critical area may be very effective. Author

INFLIGHT EVALUATION OF FOUR MEASURES OF PILOT WORKLOAD
S. G. HART (NASA, Ames Research Center, Moffett Field, CA), J. R. HAUSER (Ford Aerospace and Communications Corp., Sunnyvale, CA), and P. T. LESTER (San Jose State University, CA) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 945-949. refs

Four measures of pilot workload were tested in the NASA C-141 Kuiper Airborne Observatory. The measured included a communications analysis, subjective ratings of workload, subjective ratings of additional factors related to workload, and heart rate. Data were collected for 11 flights, each of which lasted approximately seven hours. Heart rate was found to be significantly higher for the pilot who was flying than for the pilot who was not flying and it varied significantly across flight segments, peaking during landing and take off, particularly for the pilot in the left seat who was resonsible for aircraft control. For both left and right seats, the subjective assessment of stress rather than the subjective assessment of workload was significantly correlated with variation in heart rate. Frequencies of different types of communications varied significantly across segments of flight, however, they were not correlated with subjective ratings of workload. There was a significant difference between the left and right seats in the types of activities that contributed to their workload, however, workload was considered to be equivalent for the two. PART-TRAINING STRATEGIES IN SIMULATED CARRIER LANDING FINAL APPROACH TRAINING
D. C. WIGHTMAN (U.S. Navy, Naval Training Equipment Center, Orlando, FL) and G. LINTERN (Essex Corp., Orlando, FL) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 1013-1017. refs

A transfer-of-training investigation of part-task training was conducted at the Navy's Visual Technology Research Simulator (VTRS). A task segmentation strategy (backward chaining) and a task simplification strategy (enhancement of the simulated aircraft's response to throttle adjustments) were tested. In addition, the subjects' motor-skill aptitude was assessed. Training under backward chaining produced better transfer to the criterion task than an equal number of training trails on the criterion task itself. An aptitude-by-treatment interaction indicated that the backward chaining method of training was particularly advantageous for low-aptitude subjects. The simplification strategy did not appear to enhance transfer. Author

PERCEPTUAL-MOTOR COORDINATION AND ADAPTATION DURING LOCOMOTION - DETERMINANTS OF PRISM ADAPTATION IN HALL EXPOSURE
G. M. REDDING (Illinois State University, Normal) and B. WALLACE (Cleveland State University, OH) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 4, Oct. 1985, p. 320-330. refs (Contract NIH-1-RO3-MH-34383)

In the present examination of prismatic dispiacement adaptation under conditions involving locomotion in a hallway exposure, total prism adaptation was in general inversely related to the presence or absence of mental arithmetic, and the relative magnitude of visual proprioreceptive shift depended on the availability of visible sound sources. The results obtained are consistent with a model assuming that local adaptive response depends on the available capacity for establishing and maintaining coordinative linkage between discordant systems. By contrast, locus or adaptive recalibration depends on the direction of these coordinative linkages, discordance, and adaptation occurring in the guided system(s). O.C.

A86-24325
DUAL HEMISPHERIC PROCESSING IN A LETTER MATCHING TASK
J. CONEY (Murdoch University, Australia) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 4, Oct. 1985, p. 331-342. refs

An investigation is made of the claim that performance on recognition, detection, and matching tasks can be enhanced if stimuli are projected to both sides of the visual field rather than only to one, due to the distribution of perceptual processing between the hemispheres. In the present series of three experiments, it was noted that while lateral interference between adjacent stimuli was implicated, a strong residual effect ascribable to hemispheric mechanisms remained. A model based on parallel hemispheric decision processes appears to furnish a better account of the data than one based on the notion of distributed perceptual processing. O.C.

SOME PSYCHOLOGICAL ASPECTS OF AIR SICKNESS [QUELQUES REMARQUES SUR LES ASPECTS PSYCHOLOGIQUES DES MALAISES EN VOL]
J. R. GALLE-TESSONNEAU (Armee de l'Air, Centre Medical de Psychologie Clinique, Paris, France) and G. SOLIGNAC (Hopitaux des Armees; Centre Principal d'Expertise Medicale du Personnel Navigant, Paris, France) (Societe Francaise de Medecine des Armees, Seance de Medecine Aeronautique, Metz, France, June 19, 1985) Medecine Aeronautique et Spatiale, vol. 24, 4th Quarter, 1985, p. 237-239. In French.

Various psychological aspects of air sickness among pilots are discussed from the point of view of the doctor. The main concern of air sickness is its effect on the neuro-sensorial capacities and the alertness of a pilot, and therefore flight safety. A difficulty arises in that the symptoms are not the same and are not experienced equally by all pilots, and because some pilots do not report bouts of illness to avoid being declared unfit for flight duty. When a pilot does report a problem, the tendency is for the pilot to discount the seriousness of the symptoms. However, pilots often retain significant levels of anxiety at having experienced air sickness, and must be thoroughly convinced that the factors which brought on the sensations have been 'cured' and can be explained causally in clear and definite terms. If the onset of air sickeness corresponds with emotional trauma in a pilot's life, then the pilot must be reassigned or removed from flight duty entirely if the emotional charge persists. The psychiatric goal, in the latter case, is to help the pilot accept a compromise situation which will permit going on with his life. M.S.K.

THE FLIGHT SURGEON AND PSYCHIATRY - INTEREST AND SKILLS
R. J. URSANO (Uniformed Services University of the Health Sciences, Bethesda, MD) and W. G. JACKSON, JR. (USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 126-130. refs

The effects of age, experience, and flight medicine training status on the attitude and psychiatric skills of the nonpsychiatrist flight surgeon are examined. Interest in psychiatry, self-assessed ability of psychiatric skill, and education needs are measured in 170 USAF physicians using multi-dimensional contingency tables and linear regression models. The data reveal that age and experience do not affect interest in psychiatry; however, training status has a negative impact on the physician's interest. Psychiatric skills are related to training status, age, and experience; the older fully-trained physician has more interest and knowledge in psychiatry. A need for further education is observed in physicians in-training but is unaffected by age and experience. I.F.

FLYING AND DANGER, JOY AND FEAR
D. R. JONES (USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 131-136.

The emotional roots which motiviate a person to become a flier or to develop an anxiety about flying are discussed. Reasons for choosing a flying career and their effect on a person's motivation to fly are described. The knowledge and experience required by a flight surgeon in order to evaluate and treat fliers who experience fear of flying are examined; examples of fliers who develop phobias, psychosomatic symptoms, or a loss of self-confidence are presented. SUBJECTIVE WORKLOAD AND INDIVIDUAL DIFFERENCES IN INFORMATION PROCESSING ABILITIES
D. L. DAMOS (Arizona State University, Tempe) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 71-74. refs
(Contract NCC2-202)
(SAE PAPER 841491)

This paper describes several experiments examining the source of individual differences in the experience of mental workload. Three sources of such differences were examined: information processing abilities, timesharing abilities, and personality traits/behavior patterns. On the whole, there was little evidence that individual differences in information processing abilities or timesharing abilities are related to perceived differences in mental workload. However, individuals with strong Type A coronary prone behavior patterns differed in both single- and multiple-task performance from individuals who showed little evidence of such a pattern. Additionally, individuals with a strong Type A pattern showed some dissociation between objective performance and the experience of mental workload. Author

THE TRAINING AND CERTIFICATION OF THE GENERAL AVIATION PILOT
J. M. KOONCE (Massachusetts, University, Amherst) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 87-91. refs
(SAE PAPER 841468)

Some accident statistics of general aviation are presented, as well as training and certification processes of the general aviation pilots. The rate of fatal accidents per million of miles is 0.128 in general aviation, as compared to 0.013 for air carriers. The reasons for this relatively poor safety performance are discussed, the low admission standards for the students and the lack of standardization of the flight instructors given among the primary causes. Other contributing factors are thought to be acquisition of certain habits (such as not using the check list before each flight) and poor judgment, (together with the lack of training in judgment and lack of its definition in the test guides), as well as inadequate biennial flight review (BFR) testing. Tightening up of the BFRs and a requirement to identify the pilots who have failed a BFR test are among the recommended measures. I.S.

EFFECTS OF DIGITAL ALTIMETRY ON PILOT WORKLOAD
R. L. HARRIS, SR. (NASA, Langley Research Center, Hampton, VA) and B. J. GLOVER (Kentron International, Inc., Hampton, VA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 131-136. Previously announced in STAR as N86-13892.
(SAE PAPER 841489)

A series of VOR-DME instrument landing approaches was flown in the DC-9 full-workload simulator to compare pilot performance, scan behavior, and workload when using a computer-drum-pointer altimeter (CDPA) and a digital altimeter (DA). Six pilots executed two sets of instrument landing approaches, with a CDPA on one set and a DA on the other set. Pilot scanning parameters, flight performance, and subjective opinion data were evaluated. It is found that the processes of gathering information from the CDPA and the DA are different. The DA requires a higher mental workload than the CDPA for a VOR-DME type landing approach. Mental processing of altitude information after transitioning back to the attitude indicator is more evident with the DA than with the CDPA. E.A.K.

THE DECISION TO FLY
A. F. ZELLER IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 169-176.
(SAE PAPER 841613)

The decision to fly and the capacity to carry a flight to a successful termination involves a wide spectrum of background determinants. These range from considerations of the pilot as a physical being with specific potentials and limitations of body structure, mental ability and emotional capacities to the adequacy of learning related to a specific performance and the character and condition of the aircraft. Specific factors relevant to each of these categories is discussed including the psycho-social, physiological and pathological. Crucial to success is the pilot's self-critical judgement. There is a necessary tension between the ongoing activity of carrying out a positive decision to fly and the requirements for continual assessment of the situation. Author

PREPARING FOR THE UNEXPECTED - A PSYCHOLOGIST'S CASE FOR IMPROVED TRAINING
H. C. FOUSHEE (NASA, Ames Research Center, Moffett Field, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 249-254.

In the procedures designed to minimize human errors that lead to aircraft incidents, the improved human factor engineering and automation approaches must be supplemented by new training methods. Changes are suggested in the preprogrammed training principles which are currently based almost exclusively on the procedures-oriented environment, with insufficient training for cognitive processing and awareness. Use of the Line-Oriented Flight Training procedure, in which a training simulator is supplemented by a highly structured script or scenario to simulate the total line operational environment for the purpose of simultaneously training the entire flight crew, offers one way of providing pilots and other crewmembers with the experience of dealing with unexpected or stressful events. Of primary importance is maximal coordination between the aircraft captain and other crewmembers during the flight, which puts emphasis on the importance of teamwork and personal relations among all other crewmembers. The current FARs governing training and proficiency will have to be modified to accommodate new training appoaches. I.S.

THE EFFECTS OF THE CONTRAST, SPATIAL FREQUENCY, AND TEMPORAL FREQUENCY OF A SURROUNDING FIELD UPON THE DETECTION THRESHOLDS OF GRATINGS
A. BOWLING (Monash University, Clayton, Australia) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 387-391. refs

Three experiments, in which the temporal and spatial characteristics of square-wave gratings surrounding a central test field were varied, are reported. The detection thresholds of 1-sec presentations of a 5-Hz counterphase flickering .5-cycle/deg (cpd) sinusoidal grating were measured under the different surround conditions. Threshold was found to increase with increasing surround contrast, and to be confined to surround spatial frequencies of 2 cpd and below. Maximum threshold elevation occurred with surround drift frequencies at about 8 Hz, irrespective of spatial frequency. It was concluded that the surround effect is probably due to an inhibitory interaction between transient-type mechanisms in the central visual field and the periphery. Author

SENSITIVITY TO PHASE DISTORTIONS IN CENTRAL AND PERIPHERAL VISION
L. O. HARVEY, JR., I. RENTSCHLER, and C. WEISS (Muenchen, Universitaet, Munich, West Germany) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 392-396. Research supported by the Fraunhofer-Gesellschaft and Alexander von Humboldt Stiftung. refs
(Contract NIH-RR-07013-78)

Sensitivity to phase quantization of a two-dimensional random texture pattern was determined for central and peripheral vision, using the phase-quantization paradigm of Caelli and Bevan (1982). The random texture was quantized with two-octave-wide bands centered on spatial frequencies of 2, 4, 8, and 16 cycles per degree (cpd). Six phase-distorted versions of the original texture were prepared for each of these bands, and the amount of stimulus contrast required for threshold discrimination between the original and the phase-distorted textures for each stimulus pair was determined at two exposure durations, 125 and 1000 msec. Maximum sensitivity to phase quantization was found in the 4 cpd spatial frequency band. Increasing the duration of exposure increased sensitivity. Compared with foveal viewing, a pronounced loss of sensitivity to phase quantization was found with 2 deg peripheral viewing. I.S.

A86-26295
SUPRATHRESHOLD CONTRAST PERCEPTION AS A FUNCTION OF SPATIAL FREQUENCY
P. C. QUINN (Brown University, Providence, RI) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 408-414. refs
(Contract NIH-EY-03524)

The effect of spatial frequency on the functional relationship between perceived contrast and physical contrast (particularly on the effect on the exponent of the function) was examined after controlling possible artifactual effects such as the failure to account for range and stimulus repetition effects and the contrast threshold difference. Using a modulus-free version of magnitude estimation, judgments of perceived contrast were obtained from 7 subjects at spatial frequencies of 0.75, 4, 15, and 18 cycles per degree. When the data were fit with a threshold-corrected power function, an increase in the exponent of the perceived physical contrast function was observed at both low and high spatial frequencies, relative to a middle spatial frequency. The results agree with the study of Franzen and Berkley, (1975) and are in contrast to that of Gottesman et al. (1981). I.S.

A86-26296
OVERALL SIMILARITY AND THE IDENTIFICATION OF SEPARABLE-DIMENSION STIMULI - A CHOICE MODEL ANALYSIS
R. NOSOFSKY (Indiana University, Bloomington) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 415-432. refs
(Contract NSF BNS-80-26656; NIH-MH-37208; NIH-RR-07031)

Various restricted versions of the similarity choice model (Luce, 1963; Shepard, 1957) were used to analyze data on identification by two subjects of a set of perceptually confusable stimuli varying along two continuous, separable dimensions. In the main model version, application of the multidimensional scaling approach to modeling similarity yielded excellent quantitative accounts of the data. A surprising result was that the Euclidean metric provided a far better description of psychological distance relationships than the city-block metric, a finding that contrasts with all previous conclusions regarding the appropriate Minkowski r-metric for separable-dimension stimuli. Possible reasons for this discrepancy were considered, examining Shepard's (1964) seminal study in depth. I.S.

A86-26297
A PURELY CENTRAL MOVEMENT AFTEREFFECT INDUCED BY BINOCULAR VIEWING OF DYNAMIC VISUAL NOISE
Y. Y. ZEEVI (MIT, Cambridge, MA) and G. A. GERI (Dayton University, Williams AFB, AZ) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 433-437. refs
(Contract F33615-81-K-0011)

Observers viewed dynamic visual noise binocularly with a neutral density filter placed over the right eye. Twelve of 13 observers perceived depth and coherent motion of two counterdirectional distributions of dot-planes. Three of the 12 observers saw one plane as much more distinct than the others; thus, for those observers, that dot-plane could be used as a form-free central movement stimulus. Sudden removal of the neutral density filter resulted in a short-lived movement aftereffect (MAE). The magnitude of the purely central MAE, unlike those of classical MAEs, was independent of both the magnitude and the time spent viewing the inducing movement. These results suggest a distinction between the purely central MAE reported here and the central (binocular) MAEs induced by stimulus movement on the retina. Author

A86-26298
SUPPRESSION OF VISIBLE PERSISTENCE IN APPARENT MOTION
J. H. HOGBEN (Western Australia, University, Nedlands, Australia) and V. DI LOLLO (Alberta, University, Edmonton, Canada) Perception and Psychophysics (ISSN 0031-5117), vol. 38, Nov. 1985, p. 450-460. refs
(Contract NSERC-A-6592)

Moving stimuli produce less smear than would be expected on the basis of visible persistence lasting 100-150 msec. Two experiments examined the duration of smear as a function of background luminance, target velocity, and duration of the display. It was found that smear decreased as background luminance increased, smear increased with velocity, and, as display duration increased from 10 to 160 msec, duration of smear first increased and then decreased. Alternative explanations of the results are considered. It is suggested that smear is actively suppressed by stimulus-initiated inhibitory processes. Author

A COMPARISON OF DICHOTIC LISTENING TASK SCORING METHODS
G. R. GRIFFIN and J. D. MOSKO Mar. 1985 19 p
(Contract M00-96)
(AD-A159920; NAMRL-SR-85-4) Avail: NTIS HC A02/MF A01 CSCL 05J

In a recent evaluation of two dichotic listening tasks (DLTs) as predictors of performance in Naval Aviation Undergraduate Pilot Training, results based on one of five scoring methods were presented. The purpose of this report is to provide DLT performance scores using all five scoring methods for comparative purposes to determine the scoring system most economical and efficient for automated scoring and, most sensitive to individual and mean differences. Five scoring methods are described which vary primarily in their treatments of errors, and in their consideration of the importance of sequence effects. Five independent analyses of previously reported data were performed. Results were nearly invariant across all five methods; i.e., intercorrelations among scores across scoring techniques exceeded 0.90. Two of the scoring methods are recommended for purposes of standardizing future analyses of DLT performance, one because of its simplicity and ease of application and the other, because it may have greater sensitivity to differences in individual performance. THE EFFECTS OF BIMODAL PRESENTATION OF STIMULI AND NOISE ON TARGET DETECTION Interim Report
L. J. LEWANDOWSKI and D. A. KOBUS 1 Aug. 1985 13 p
(AD-A160122; NSMRL-1058) Avail: NTIS HC A02/MF A01
CSCL 17D

Twenty men are presented background noise and target stimuli in either the visual or auditory modality, or in both at once. Auditory and visual detection thresholds were lowest when functionally redundant targets were presented simultaneously in both modalities. It appeared that two redundant signals collectively improved sensitivity and reduced uncertainty regarding a choice response, thus enabling a reduction in detection threshold. Detection threshold to a single target was not negatively affected when attention was divided between two modalities and noise presented in both. The finding of improved detection in each modality of the bimodal condition is consistent with the coactivation explanation of bimodal facilitation and supports the advantage of a bimodal input approach in tasks such as sonar, radar, and air traffic control. PHYSICAL FITNESS AS A MODERATOR OF COGNITIVE WORK CAPACITY AND FATIGUE ONSET UNDER SUSTAINED COMBAT-LIKE OPERATIONS Technical Report, Aug. 1982 - Mar. 1983
R. J. PLEBAN, D. A. THOMAS, and H. L. THOMPSON Jun. 1985 20 p
(Contract DA PROJ. 2Q1-62717-A-790)
(AD-A160417; ARI-TR-687) Avail: NTIS HC A02/MF A01
CSCL 06N

A study was devised to investigate the role of physical fitness in moderating both cognitive work capacity and fatigue onset under sustained combat operations. Sixteen male ROTC cadets were followed through a two-and-a-half-day Pre Ranger Evaluation exercise. Prior to the actual start of the exercise the cadets' overall level of physical fitness was assessed by using five fitness indices (Harvard Step Test, chinups, pushups, situps, and two-mile run). Cognitive performance and subjective measures of fatigue state were assessed at regular intervals before, during, and one day after the exercise. The results suggest that fitness may attenuate decrements in cognitive work capacity for certain tasks requiring prolonged mental effort, particularly as the cumulative effects of sleep loss and other stressors begin to mount. Similarly, the results of this study suggest that as overall stress levels increase, fitness may have a beneficial effect in moderating fatigue rate. Fitness did not significantly enhance the recovery process with respect to cognitive work capacity, and actually appeared to hinder recovery from fatigue. GRA

SYSTEM DEVELOPMENT AND EVALUATION TECHNOLOGY: STATE OF THE ART OF MANNED SYSTEM MEASUREMENT Final Report, 1980 - 1982
J. M. EDWARDS, R. F. BLOOM, and P. A. BRAININ Feb. 1985 65 p
(Contract MDA903-80-C-0345; DA PROJ. 2Q2-63743-A-794)
(AD-A160418; REPT-293-8; ARI-RN-85-20) Avail: NTIS HC A05/MF A01 CSCL 05H

This report is an up-to-date assessment of the state of the art of manned system measurement. The assessment is based in part on the material presented in the Task 3a report-Review of Manned System Measurement Literature. This report employs a topic outline compatible with the overall measurement model being developed under the present contract. The model is sufficiently representative and comprehensive so that all significant comments and authors have a place in its structure. One of the important uses of this report is the identification of current measurement capabilities and limitations, so that requirements and priorities for the improvement of system-oriented measurement can be delineated. In this review, it became apparent, for example, that measurement models need to be further developed, supported with appropriate human performance data, refined through more consistent and comprehensive applications, and validated by independent corroborations of some kind. Futhermore, the general sense of impracticality, and the need for simplifying assumptions in some cases, strongly suggests a requirement for improving the efficiency of measurement models by reducing the magnitude of effort required in their application. It is envisioned that much time, effort, and money can be saved, irrelevant measurements can be avcided, meaningfulness and utility can be enhanced, and additional applications of the models can be found if several key improvements are made. MULTIMODAL VERSUS UNIMODAL INFORMATION PROCESSING OF WORDS Interim Report
L. J. LEWANDOWSKI, S. HURSH, and D. A. KOBUS 29 Jul. 1985 14 p
(AD-A160517; NSMRL-1056) Avail: NTIS HC A02/MF A01
CSCL 17A

Sonarmen are constantly confronted with information presented simultaneously through different sensory modalities. Verbal information is one type of input to which they are exposed. Little is known regarding the effect of undirected attention when verbal information is presented simultaneously to the auditory and visual modality. The question of interest is how to unimodal and multimodal presentation conditions differentially affect performance? The superiority of any particular modality depends upon the task requirements, response demands and the complexity of the stimuli. Multimodal stimulation facilities the RT of the slower unimodal presentation while providing little if any facilitates to the faster unimodal approach. Sonarmen are exposed to various types of information. Reports of this study and previous studies have shown that the results are task dependent. Therefore, it is important to determine how different types of stimuli interact with modes of presentation and affect sonar performance. GRA

CSCL 05J

There are two dominant approaches to understanding human memory, one in the tradition of Ebbinghaus, the other in the tradition of Bartlett. The former approach views learning as the formation of associations, while in the latter views memory as the process of reconstruction of fragments based on prior knowledge. These positions are often considered antithetical: Ebbinghaus was concerned with laws of memory and tried to control for prior knowledge; Bartlett was concerned with how our world knowledge interacts with learning and memory. This paper argues that one can collect data that supports either position because people can adopt one of several memory strategies. Data are reviewed that ilustrate that the same knowledge structure can produce dramatically different results, depending on the strategies that operate on that structure. Author (GRA)

AN INVESTIGATION INTO EFFECTS OF ENVIRONMENTAL CHANGES ON LOCUS OF CONTROL M.S. Thesis

S. A. ANSWAY Sep. 1985 66 p

(AD-A160861; AFIT/GLM/LSB/85S-2) Avail: NTIS HC A04/MF A01 CSCL 05J

Past research suggest that relationships exist between Type A personality, stress, and coronary heart disease. This thesis determined that Type A individuals are inclined to experience more stress than Type B individuals in similar situations. A relationship was found between Type A behavior and internal locus of control indicating that individuals with internal locus of control are more likely to be Type A personalities than type B personalities. Relationships were also found among Type A behavior, internal locus of control, and assertiveness indicating that Type A individuals are more assertive than Type B individuals. Family inventory was inversely related to locus of control inferring that internal locus of control individuals are more satisfied with their personal relationships than are external locus of control individuals. Because family inventory was also inversely related to stress, when stress is present in one area of an internal locus of control individuals's life, the individual looks to other areas of his life for satisfaction. No relationship was found between stress and assertiveness indicating that assertive individuals deal more effectively with stressful situations. This investigation also determined that as the environment changes to a more structured rigid environment, the individual shifts from an internal to an external locus of control. These determinations were based on statistical analysis using Pearson Correlations, Paired t-Tests, and Regression Analysis.

SIMPLE AND CHOICE REACTION TIME IN A SECONDARY TASK UNDER VARIED STIMULUS MODALITY PROBABILITIES Interim Report

D. K. MCBRIDE, L. S. GOODMAN, and J. M. OWENS Feb. 1985 12 p

(AD-A159698; NAMRL-1313) Avail: NTIS HC A02/MF A01 CSCL 05J

Most investigations of attention and attention allocation have been limited to assessments of attention shifting among stimuli simultaneously presented within a single sensory modality. The construct of attention, however, is generally conceptualized as the process which determines the selection of sensory information from all potential sources, among all potential modalities. Although limited in relevance to more real-world, high demand task situations, many of the findings and interpretations from single modality attention studies provide an important theoretical basis for performance assessment in complex task environments requiring multimodal processing. The objective of the present research was to directly assess attention allocation in tasks requiring both visual and auditory information processing. In the present study, modality uncertainty was reduced by experimentally manipulating the probability of stimulus occurrence within a given modality. Furthermore, responding in the present experiment required choice as well as simple reaction, and the responses were made jointly with the continuous execution of a three-axis, compensatory tracking task. As expected, simple and choice reaction times to auditory signals were faster than were those to visual signals.

EVALUATION OF A MULTI-METHOD GROUP TREATMENT APPROACH FOR THE MANAGEMENT OF STRESS Ph.D. Thesis

S. H. TALLANT 1985 322 p

(AD-A160813; AFIT/CI/NR-85-118D) Avail: NTIS HC A14/MF A01 CSCL 05J

The treatment effectiveness of a stress management package is evaluated. The role of social support as a significant external factor in reducing stress symptomatology is then discussed. It is hypothesized that subjects receiving treatment would obtain significantly greater decreases in stress than subjects in a waiting list condition. Also, it is hypothesized that wait-list subjects with high levels of social support would obtain significant greater decreases in stress than wait-list subjects with low levels of social support. A matched-pair randomized block design is used. Thirty-two subjects are rank ordered on a measure of social support, matched according to level of social support, and randomized into either treatment or wait-list condition. The statistical and clinical results demonstrate the contribution of the stress management package in reducing stress when compared to no treatment intervention.

AN INVESTIGATION INTO PEER AND SUPERVISOR DIFFERENCES IN THE OBSERVATION OF PERFORMANCE-RELATED BEHAVIORS M.S. Thesis

M. W. DALEY Dec. 1985 46 p

(AD-A160819; AFIT/CI/NR-85-132T) Avail: NTIS HC A03/MF A01 CSCL 05I

Differences between peer and supervisors with respect to the observation of performance-related behaviors using the Instanteneous Report of Judgments (IRJ) technique are examined. Undergraduate students and graduate teaching assistants served as peer and supervisor subjects respectively. All subjects viewed a videotape of an undergraduate giving a major classroom oral presentation. It was hypothesized that peer and supervisor subjects would differentially observe imbedded incidents due to their different role relationships to the presenter. The results indicate partial support for the hypothesis, with supervisor subjects observing significantly more critical incidents. An alternative interpretation for the results, that of rater expertise, is forwarded and discussed. Directions for future research in the area of cognitive processes and performance appraisal are discussed. GRA

THE CLINICAL PREDICTION OF DANGEROUSNESS Ph.D. Thesis

E. R. WILLIAMS May 1985 119 p

(AD-A160820; AFIT/CI/NR-85-133D) Avail: NTIS HC A06/MF A01 CSCL 05J

The failure to accurately predict violent potential in psychiatric patients is currently an area of popular and professional interest. Virtually all studies have shown psychological testing to be a poor predictor of violence. The present investigation utilized typed vignettes which described a brief, fictionalized interview as an analog to an actual contact with a patient. A recent history of violence (an actuarial factor), support by a caring person (an environmental factor), and psychological testing information were systematically manipulated among the vignettes. Vignettes were mailed to psychiatrists in California who are asked to rate dangerousness and to decide if emergency hospitalization was required for the fictionalized patient. Each psychiatrist received one of 16 possible vignettes. Statistical analyses were utilized to determine how the three manipulated variables actually influenced professional decision making, and these results were compared with what factors the psychiatrists said influenced them. Psychological testing exerts a powerful but unwarranted, and possible unconscious, influence on the judgmental process.

MESOLIMBIC AND NIGROSTRIATAL DOPAMINERGIC SYSTEMS: BEHAVIORAL NEUROPHARMACOLOGY Ph.D. Thesis
S. L. HARTGRAVES Aug. 1985 150 p
(AD-A160821; AFIT/CI/NR-85-134D) Avail: NTIS HC A07/MF A01 CSCL 06O

Drug-induced behaviors associated with the nucleus acumbens and striatum are examined. The use of 6-Hydroxydopamine to anatomically enhance a behavior emanating from one of the above structures (by allowing doses of drugs low enough to prevent major behavioral competition from the other) was only partially successful. Thus, locomotor hyperactivity and circling were enhanced by 6-OHDA-induced lesions of the nucleus accumbens and the medial forebrain bundle, respectively. Bilateral lesions of the striatum did not result in simple enhancement of stereotypic behavior, but instead caused a unique, self-directed behavior termed stereotypic grooming. Competition between the nucleus accumbens and the striatum for behavioral expression was evident in most of these studies. GRA

A MODEL OF THE CONJUNCTION FALLACY
H. J. EINHORN Jun. 1985 26 p
(Contract N00014-84-C-0018)
(AD-A160876; TR-15) Avail: NTIS HC A03/MF A01 CSCL 05J

Tversky & Kahneman show that both sophisticated and naive people, in many different substantive problems, often judge the conjunction of events to be larger than one of its components (hereafter called a single violation). Furthermore, for some problems, people judge the conjunction as larger than both of its components (a double violation). The purpose of this document is to propose a quantitative model of how people judge the probability of conjunctive events. The advantage of the model is that it makes specific predictions as to when conjunction fallacies of different types will or will not occur. Moreover, the model is naturally extended to deal with conjunctive explanations for events. The conjunction fallacy occurs when the judged probability of a conjunctive event is larger than the probability of one (or more) of its constituents. A model of this phenomenon is proposed in which the judged conjunctive probability is a weighted geometric average of the component probabilities, where the weights reflect the representativeness of the components. The model generalizes to the case where the events involve a casual or correlational link, and, to the use of conjunctive explanations of an event. In all three situations, the model specifies the conditions under which different degrees of the fallacy will or will not occur. GRA

ON THE ANALYSIS AND DESIGN OF HUMAN INFORMATION PROCESSING ORGANIZATIONS
K. L. BOETTCHER and R. R. TENNEY Oct. 1985 6 p
(Contract N00014-77-C-0532; N00014-84-K-0519)
(AD-A161015; AD-F620003; LIDS-P-1503) Avail: NTIS HC A02/MF A01 CSCL 05J

The design of human organizations where members perform routine tasks under the pressure of time is considered. A three-phase approach is outlined. In the first phase, normative decision rules that specify ideal human behavior are obtained. In the second phase, implementations of these decision rules are devised, and descriptions of actual human behavior and workload are developed. Finally a third phase integrates design elements by placing parameters of the implementations for best organization performance, subject to individual member workload limitations. To illustrate the approach, a specific design problem is considered. Author (GRA)

AN ANALYSIS OF VISUAL TASKS IN HELICOPTER SHIPBOARD LANDING Final Technical Report, Sep. 1981 - Apr. 1985
K. S. BERBAUM and R. S. KENNEDY 1 Nov. 1985 62 p
(Contract N61339-81-C-0105)
(AD-A161101; EOTR-85-7) Avail: NTIS HC A04/MF A01 CSCL 05H

The purpose of this research effort was to identify visual research issues concerning helicopter landings, particularly the hover phase, for future study in the Visual Technology Research Simulator (VTRS) program. Identification of salient visual issues is a step toward surfacing equipment features that can be modified and studied. As we discussed the task with pilots, reviewed NATOPS manuals, and simulations witnessed, it became apparent that the visual task may differ depending upon whether: experienced or inexperienced pilots are flying; a simulator or an aircraft is flown; the environment is day or night; the pilot sought to acquire or maintain a skill level. As a way of limiting this broad project, it was elected to review intensively a scenario involving a highly experienced operator flying dusk/night approaches in a simulator. The Naval aviator selected was prompted by another aviator more familiar with the objective who dictated verbal protocols of his visual and control activities during several landings. These protocols were sorted into 10 phases in order to correspond to increasing distances in the landing task and the visual information processing within each stage was described. Therefore, the stages are delimited in terms of range or altitude from the ship. We believe the most useful outcome of this analysis will be a list of visual cue augmentations that may be implemented and studied over the various stages of landing. GRA

LOCAL AND GLOBAL FACTORS IN LEARNING
L. N. COOPER 6 Nov. 1985 42 p
(AD-A161128; TR-28) Avail: NTIS HC A03/MF A01 CSCL 05J

Recent progress in the interaction of theoretical ideas and experimental results that relate to learning and memory is discussed. Consideration is given, in particular, to the effects of the neurotransmitters GABA, Norepinephrine and Acetylcholine on the development of circuitry in visual cortex. That most intriguing aspect of human memory is that: its persistence in spite of continual loss of individual neurons over the lifetime of the individual has led many workers to the concept of distributed memory. For a distributed memory (more like a hologram than a photograph) possesses in a very natural way the property of relative invulnerability to the loss of storage units. Individual memory sites hold superimposed information concerning many events. We can make complex decisions in small parts of a second. This suggests very strongly that there is much parallel processing in the brain - an idea that is almost obvious on inspection of component such as the retina. It is now commonly thought that the synaptic junction may be a means to store information (memory, for example) as well as to transmit it from neuron to neuron. GRA

THE INFLUENCE OF QUALITY CIRCLES ON ATTITUDINAL OUTCOMES AMONG CIVIL ENGINEERING PERSONNEL M.S. Thesis
A. E. THAL, JR. Sep. 1985 29 p
(AD-A161152; AFIT/GEM/LSB/85S-21) Avail: NTIS HC A03/MF A01 CSCL 13B

This thesis investigated the influence of QCs on various satisfaction levels among Air Force civil engineering personnel with the objective being to determine whether a relationship exists between QC membership and an employee's level of satisfaction/morale. Surveys were mailed to a sample of QC members and nonmembers working in civil engineering squadrons at five different bases. Statistical analysis consisted of reliability estimation, Pearson correlation, and Student's t-tests. The results of this research indicated that there were significant differences between QC members and nonmembers on two variables:

self-ratings of both job performance and job effort. In fact, it appeared that QC members scored lower, but not significantly lower, on many of the variables. The many weaknesses inherent in this study suggest that these results are tentative, at best. Four tenable explanations for the results are given. If QCs are to be increasingly used by the government, further research into the outcomes of the QC process are warranted. GRA

DUTY-CYCLE ANALYSIS OF A HUMAN-CONTROLLED MANIPULATOR
R. S. STOUGHTON (Tennessee, University, Knoxville) and H. L. MARTIN (Oak Ridge National Laboratory, TN) Journal of Robotic Systems (ISSN 0741-2223), vol. 2, Winter 1985, p. 473-499. refs
(Contract DE-AC05-84OR-21400)

The duty cycles of a human-controlled servomanipulator system have been experimentally measured revealing how humans use manipulators to perform tasks. The use of the kinematic ranges, in both joint and Cartesian space is valuable to engineers in the kinematic design of servomanipulators. The working volume of human manipulation presented here is also of interest to designers of prosthetic systems. These results illuminate the relative merits of various system drive configurations. A graphical representation of mechanical power usage, which displays the total operation time as a function of torque and vulocity, is presented for each manipulator joint. These data are compared with data representing idealized joint performance resulting in design criteria for quantitative improvements in joint torque and velocity capacities. A generalized method for applying this representation to any robotic system is discussed. Author

MINIMUM PRESSURE FOR A ZERO-PREBREATHE PRESSURE SUIT
R. W. KRUTZ, JR. (Technology, Inc., San Antonio, TX), G. A. DIXON (USAF, School of Aerospace Medicine, Brooks AFB, TX), and W. T. HARVEY (Lockheed Missiles and Space Co. Inc., Sunnyvale, CA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 5 p. refs
(Contract NASA ORDER T-82170)
(SAE PAPER 851315)

There are two current approaches to reducing the risk of decompression sickness during repeated extravehicular activity (EVA) without prebreathing 100 percent oxygen. One approach suggests the use of different pressures in the transfer vehicle, the station, and the suit. The other would use advanced pressure-suit technology to build a suit that will make different pressures unnecessary provided the bends-free suit pressure is reasonable and can be readily determined. Research at the USAF School of Aerospace Medicine since November 1982 has been directed at determining this suit pressure using human subjects at simulated altitudes of 16,500 to 10,000 feet (7.8 to 10 psia). An earlier report of this ongoing research showed that bends is not totally eliminated at 7.8 psia. The present study is a continuation of this effort to define a 'bends-free' suit pressure with the initial results suggesting that this pressure begins at around 9.5 psia (from a 14.7 psia station). THE ROLES OF ASTRONAUTS AND MACHINES FOR FUTURE SPACE OPERATIONS
R. H. SCHAEFER, R. E. OLSEN, and F. J. ABELES (Grumman Aerospace Corp., Bethpage, NY) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 13 p.
(SAE PAPER 851332)

A comparative assessment is made of remote operation space environment systems and human EVAs, with a view to future space missions, both individually and in combination. The tasks in question encompass servicing and construction operations on manned space station and unmanned platforms. Laboratory tests and simulations of representative remote system and EVA task performance are discussed and recommendations for additional development activities are presented. O.C.

A86-23522
EVOLUTION OF THE SHUTTLE EXTRAVEHICULAR MOBILITY UNIT'S LIFE SUPPORT SYSTEM
F. H. GREENWOOD and R. J. BALINSKAS (United Technologies Corp., Hamilton Standard Div., Windsor Locus, CT) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 11 p.
(SAE PAPER 85-1333)

The philosophy, design, and operation of the Shuttle Extravehicular Mobility Unit (EMU) Block I and Block II are discussed, stressing details of the life support system (LSS). Besides the need to meet performance requirements in environmental extremes, the major design considerations of the LSS were size and weight restrictions, and maintainability. The liquid cooling and ventilation garment (LCVG) contains tubes of cooling water and has ventilation ducting to return O2, CO2, and humidity to the LSS for purification, cooling, and recirculation. The primary life support subsystem (PLSS) mounted on the back of the hard upper torso (HUT) of the space suit assembly (SSA) includes the primary oxygen bottles, three storage tanks of water for heat rejection, the fan/separator/pump assembly, the heat rejection sublimator, the contaminant control cartridge, and a caution and warning system computer to monitor the LSS. A display and control module gives the computer readout and has manual control of the LCVG water temperature. Innovations in the Block II design resulted in reduced maintenance and a fourteen-fold increase in the mean time between failures. Detailed schematics are included. R.R.

YOUR SPACE SUIT AND YOU - SIGNIFICANCE OF MANLOADING IN PRESSURE SUIT DESIGN
M. ROUEN (NASA, Johnson Space Center, Houston, TX) and R. GRAY (ILC Industries, Inc., ILC Dover Div., Frederica, DE) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 15 p. refs
(SAE PAPER 851334)

Data collection on man-induced loads borne by space suits is discussed, with emphasis on the glove area. The distinction between the 'potential' maximum manload (measured according to the 95 percentile male outside the suit), and the actual manload experienced by the suit or 'limit manload', is stressed. Limit manload data for the glove were collected using a glove with finger and metacarpal joints and a hard shell to support strain gages. Potential manload data are theorized to exceed the limit manload (as corroborated by entire suit limit load data presented for the Apollo and Shuttle suits) because of load sharing within the fabric configuration, test inputs being at values other than 95 percentile values, and the restraint line acting like a spring and preventing the load from being induced. This, however, is not borne out by the glove test data, illustrating the difficulty of measuring the man/machine interface. Design load is determined by adding he pressure load and the limit load after compensations have been

made for load splitting. Finally, a method for better testing, used in the design of an improved mobility glove for the Space Shuttle program, is presented. R.R.

A86-23524
ENHANCEMENT OF SPACE SUIT GLOVE PERFORMANCE
H. C. WRIGHT, III (ILC Industries, Inc., ILC Dover Div., Frederica, DE) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 18 p.
(SAE PAPER 851335)

Space suit glove design from the Apollo program to the present day is detailed. The low operating pressure of the Apollo and Shuttle suits makes possible the fabrication of gloves from 'softgoods' (fabrics and dipped urethanes). Both systems have identical joint motions, accommodated for in the digits by softgoods material, and in the wrist by supporting hardware with the aid of bearings mounted in a disconnect coupling. The Apollo glove consisted of a custom-molded integral bladder/restraint forming the pressure retaining and loadbearing element, a Neoprene/Latex sheath adding protection of the other elements, and an outer Thermal Garment (TMG) for thermal and abrasion/puncture protection. Different material, a separate removable bladder, pleats on the backs of TMG digits, and less abrasion and thermal protection in the Shuttle Baseline Glove resulted in better structural integrity and ease of production without compromising mobility. In the Shuttle Modified glove from 1985 on, a new bladder material eliminated its predecessor's problem of hydrolysis; increased pleating contributed to a 30 percent reduction in digit joint torque; and digit adjustment capability reduced the numer of projected custom gloves due to poor size fitting. Future developments will focus on mobility and the needs of the Space Station program. Glove schematics are included. R.R.

A86-23526
STATIC FEED WATER ELECTROLYSIS SYSTEM FOR SPACE STATION O2 AND H2 GENERATION
J. T. LARKINS and A. J. KOVACH (Life Systems, Inc., Cleveland, OH) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 14 p. refs
(SAE PAPER 851339)

The development of a three-person O2 generation system based upon the static feed water electrolysis (SFWE) concept is analyzed. A 30-cell electrolysis module, which is capable of producing 2.50 kg/day of O2 for metabolic use, 1.18 kg/day for CO2 removal, and 0.24 kg/day to compensate for overboard leakage, is designed. The electrochemical reaction which occurs in the water electrolysis cell, and the operation of the cell are examined. The three additional components of the oxygen generation system, the coolant control assembly, the three-fluids pressure controller, and the fluid control assembly, are described. The endurance testing of the components of the SFWE system is studied. The SFWE cell size optimization based on calculating total equivalent weight in terms power penalty is investigated. A SFWE system design for the Space Station is proposed. I.F.

DEVELOPMENT STATUS OF REGENERABLE SOLID AMINE CO2 CONTROL SYSTEMS
A. K. COLLING, JR., T. A. NALETTE (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT), R. J. CUSICK (NASA, Johnson Space Center, Houston, TX), and R. P. REYSA (Boeing Aerospace Co., Seattle, WA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 10 p. refs
(Contract NAS9-13624; NAS9-16978)
(SAE PAPER 85-1340)

The development history of solid amine/water desorbed (SAWD) CO2 control systems is reviewed. The design of the preprototype SAWD I CO2 system on the basis of a three-man metabolic load at the 3.8 mm Hg ambient CO2 level, and the functions of the CO2 removal, CO2 storage/delivery, controller, and life test laboratory support packages are described. The development of a full-scale multiple canister SAWD II preprototype system, which is capable of conducting the CO2 removal/concentration function in a closed-loop atmosphere revitalization system during zero-gravity operation, is examined. The operation of the SAWD II system, including the absorption and desorption cycles, is analyzed. A reduction in the thermal mass of the canister and the system's energy transfer technique result in efficient energy use. The polyether foam, nylon felt, nickel foam, spring retained, and metal bellows bed tests performed to determine the design of the zero-gravity canister are studied; metal bellows are selected for the canister's configuration. I.F.

ELECTROCHEMICAL CO2 CONCENTRATION FOR THE SPACE STATION PROGRAM
N. LANCE (NASA, Johnson Space Center, Houston, TX), M. SCHWARTZ (NASA, Ames Research Center, Moffett Field, CA), and R. B. BOYDA AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 10 p. refs
(SAE PAPER 851341)

Under the sponsorship of NASA, Electrochemical Carbon Dioxide (CO2) Concentration EDC technology has been developed that removes CO2 continuously or cyclically from low CO2 partial pressure (400 Pa) atmospheres with the performance and operating characteristics required for Space Station applications. The most recent advancement of this technology is the development of an advanced preprototype subsystem, the CS-3A, to remove the metabolic CO2 produced by three persons from the projected Space Station atmosphere. This paper provides an overview of EDC technology, shows how it is ideally suited for Space Station application, and presents technology enhancements that will be demonstrated by the CS-3A subsystem development program. INITIAL DEVELOPMENT AND PERFORMANCE EVALUATION OF A PROCESS FOR FORMATION OF DENSE CARBON BY PYROLYSIS OF METHANE
G. P. NOYES (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT) and R. J. CUSICK (NASA, Johnson Space Center, Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 9 p. refs
(SAE PAPER 851342)

The three steps in pyrolytic carbon formation are: (1) gaseous hydrocarbon polymerization and aromatic formation; (2) gas-phase condensation and surface adsorption/impingement of polyaromatic hydrocarbon; and (3) final dehydration to carbon. The structure of the carbon in the various stages of formation is examined. The apparatuses and experimental procedures for the pyrolysis of methane in a 60 cm long quartz reactor tube at temperatures ranging from 1400-1600 K are described. The percentage of carbon converted and its density are calculated and tabularly presented. The results reveal that dense carbon formation is maximized and soot eliminated by this procedure. It is observed that conversion efficiency depends on the composition of the inlet gas and conversion increases with increasing temperature. Based on the experimental data a three-man carbon reactor subsystem (CRS) is developed; the functions of the Sabatier Methanation Reactor, two carbon formation reactors and fluid handling components of the CRS are analyzed. The CRS forms 16 kg of carbon at a rate of 0.8 kg/day for 20 days in a two percent volume density quartz wool packing at temperature of 1500-1600 K. I.F.

A86-23530
COMPARISON OF CO2 REDUCTION PROCESS - BOSCH AND SABATIER
L. SPINA and M. C. LEE (Life Systems, Inc., Cleveland, OH) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 12 p. refs
(SAE PAPER 851343)

An essential technology for making long-term, manned space missions a reality is related to regenerative life support processes for the revitalization of the spacecraft atmosphere. A major step in such processes is concerned with the reduction of metabolically produced CO2 for subsequent recovery of oxygen. The Bosch and Sabatier processes represent two leading candidates for CO2 reduction. Both processes are being investigated by NASA with respect to their applicability to the Space Station ECLSS (Environmental Control/Life Support Systems) requirements. In the Bosch process CO2 reacts catalytically with H2 to produce water and solid carbon, while the Sabatier process involves the catalytic reaction of CO2 and H2 to produce water and methane. The Bosch CO2 reduction subsystem is discussed along with the Sabatier CO2 reduction subsystem. G.R.

MEMBRANE-BASED WATER- AND ENERGY-RECOVERY SYSTEMS FOR THE MANNED SPACE STATION
R. RAY (Bend Research, Inc., OR) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 16 p. refs
(SAE PAPER 851345)

This paper describes four membrane-based subsystems to use in the waste-water treatment system of the manned space station being planned by NASA. These membrane-based subsystems involve the recycle of the various wastewater streams and result in increased energy efficiency. Furthermore, in these four subsystems, the membrane acts as a barrier between the wastewater source and the wastewater treatment and consumption systems, thus increasing the reliability of these systems. Finally, the membranes are highly impermeable to the contaminants in the wastewaters and thus help to reduce the load on such expendables as post-treatment adsorption beds. Author

PHASE CHANGE WATER PROCESSING FOR SPACE STATION
E. M. ZDANKIEWICZ (Life Systems, Inc., Cleveland, OH) and D. F. PRICE (NASA, Johnson Space Center, Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 12 p.
(SAE PAPER 851346)

The use of a vapor compression distillation subsystem (VCDS) for water recovery on the Space Station is analyzed. The self-contained automated system can process waste water at a rate of 32.6 kg/day and requires only 115 W of electric power. The improvements in the mechanical components of VCDS are studied. The operation of VCDS in the normal mode is examined. The VCDS preprototype is evaluated based on water quality, water production rate, and specific energy. The relation between water production rate and fluids pump speed is investigated; it is concluded that a variable speed fluids pump will optimize water production. Components development and testing currently being conducted are described. The properties and operation of the proposed phase change water processing system for the Space Station, based on vapor compression distillation, are examined. I.F.

(Contract NAS9-16846)
(SAE PAPER 85-1347)

A total organic carbon (TOC) analysis system based on ultraviolet absorption is described. The equation for measuring the intensity of the absorbed radiation of the organic substances, which is based on the Lambert-Beer law, is given; the intensity of the absorption is proportional to the concentration of the solution. The operation of the UV-Absorption analyzer, which utilizes a split beam, two wvaelength method, is studied. The influences of the cell path length and specific compounds in the solution flowing through the cell on absorbances is discussed. The performance and response of the analyzer is evaluated; good correlation is observed between the absorption value and TOC. The advantage of the UV-Absorption as compared with the UV-Oxidation are examined. I.F.

THERMOELECTRIC INTEGRATION MEMBRANE EVAPORATION SUBSYSTEM WATER RECOVERY - TECHNOLOGY UPDATE
G. F. DEHNER (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT) and R. P. REYSA (Boeing Aerospace Co., Seattle, WA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 8 p. refs
(SAE PAPER 851348)

A three-person preprototype Thermoelectric Integrated Membrane Evaporation Subsystem (TIMES I) has undergone additional wastewater processing testing in order to evaluate a redesigned evaporator assembly. The new evaporator design incorporates a number of concepts that have been selected for use in the next generation advanced preprototype subsystem design. A discussion of the operating performance of the TIMES I preprototype with the new evaporator installed is presented in this paper, as well as a more detailed description of the design changes currently being implemented in the improved water recovery subsystem (TIMES II). Special attention is given in this discussion to the improved maintenance aspects of the advanced preprototype evaporator/condenser assembly. In addition, specific advanced preprototype design information is provided in order to illustrate the end product of previous design studies. Author

SPACE STATION NITROGEN SUPPLY SYSTEM BASED ON STORED CHEMICALS
F. T. POWELL (NASA, Ames Research Center, Cleveland, OH) and M. SCHWARTZ AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 11 p. refs
(SAE PAPER 851349)

The Space Station atmosphere is to have an 'earth-like' composition, and nitrogen is to be routinely supplied to replace losses. The required nitrogen is to be provided by an innovative method, involving a catalytic dissociation of liquid N2H4 and separation of the product nitrogen and hydrogen mixture. The considered technique of nitrogen storage and resupply has several advantages in comparison to methods using either cryogenic liquid or high pressure nitrogen. One advantage is related to savings with respect to launch weight, while a second advantage is provided by the obtained hydrogen which is available for other uses within the Space Station. G.R.

WET OXIDATION OF A SPACECRAFT MODEL WASTE
C. C. JOHNSON and T. WYDEVEN (NASA, Ames Research Center, Moffett Field, CA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 14 p. refs
(SAE PAPER 851372)

Wet oxidation was used to oxidize a spacecraft model waste under different oxidation conditions. The variables studied were pressure, temperature, duration of oxidation, and the use of one homogeneous and three heterogeneous catalysts. Emphasis is placed on the final oxidation state of carbon and nitrogen since these are the two major components of the spacecraft model waste and two important plant nutrients. Author

PERFORMANCE AND ENDURANCE TESTING OF A PROTOTYPE CARBON DIOXIDE AND HUMIDITY CONTROL SYSTEM FOR SPACE SHUTTLE EXTENDED MISSION CAPABILITY
C. H. LIN and R. J. CUSICK (NASA, Johnson Space Center, Houston, TX) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 10 p. refs
(SAE PAPER 851374)

An advanced flight prototype regenerable CO2 and humidity control system was delivered to NASA-JSC in February 1980. It is pointed out that this system offers substantial weight savings compared with the Shuttle Orbiter expendable lithium hydroxide CO2 removal system for extended duration missions. The present paper provides a brief description of the 4- to 10-man regenerable CO2 and humidity control system. The potential advantages which can be realized for an extended duration Shuttle mission are considered along with the results of extensive testing conducted at JSC. The performance evaluation and endurance tests show that the system is capable of long-term operation (up to 60 days) without maintenance. G.R.

SPACE STATION ENVIRONMENTAL CONTROL/LIFE SUPPORT SYSTEM ENGINEERING
C. W. MILLER and D. B. HEPPNER (Life Systems, Inc., Cleveland, OH) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 13 p. Research supported by Life Systems, Inc. and NASA. refs
(SAE PAPER 851375)

The present paper is concerned with a systems engineering study which has provided an understanding of the overall Space Station ECLSS (Environmental Control and Life-Support System). ECLSS/functional partitioning is considered along with function criticality, technology alternatives, a technology description, single thread systems, Space Station architectures, ECLSS distribution, mechanical schematics per space station, and Space Station ECLSS characteristics. Attention is given to trade studies and system synergism. The Space Station functional description had been defined by NASA. The ECLSS will utilize technologies which embody regenerative concepts to minimize the use of expendables. G.R.

ENVIRONMENTAL CONTROL AND LIFE SUPPORT SYSTEMS TECHNOLOGY OPTIONS FOR SPACE STATION APPLICATION
J. B. HALL, JR., M. J. FEREBEE, JR. (NASA, Langley Research Center, Hampton, VA), and K. H. SAGE (Kentron International, Inc., Hampton, VA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 19 p. refs
(SAE PAPER 851376)

Continuous assessments regarding the suitability of candidate technologies for manned Space Stations will be needed over the next several years to obtain a basis for recommending the optimum system for an Initial Operating Capability (IOC) Space Station which is to be launched in the early 1990's. This paper has the objective to present analysis programs, the candidate recommendations, and the recommended approach for integration these candidates into the NASA Space Station reference configuration. Attention is given to ECLSS (Environmental Control and Life Support System) technology assesament program, an analysis approach for candidate technology recommendations, mission model variables, a candidate integration program, metabolic oxygen recovery, urine/flush water and all waste water recovery, wash water and condensate water recovery, and an integration analysis. G.R.

UTILITY OF AN EMULATION AND SIMULATION COMPUTER MODEL FOR AIR REVITALIZATION SYSTEM HARDWARE DESIGN, DEVELOPMENT, AND TEST
J. L. YANOSY (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT) and L. F. ROWELL (NASA, Langley Research Center, Hampton, VA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 13 p. refs
(SAE PAPER 851377)

Efforts to make increasingly use of suitable computer programs in the design of hardware have the potential to reduce expenditures. In this context, NASA has evaluated the benefits provided by software tools through an application to the Environmental Control and Life Support (ECLS) system. The present paper is concerned with the benefits obtained by an employment of simulation tools in the case of the Air Revitalization System (ARS) of a Space Station life support system. Attention is given to the ARS functions and components, a computer program overview, a SAND (solid amine water desorbed) bed model description, a model validation, and details regarding the simulation benefits. G.R.

POTENTIAL FOR UTILIZATION OF ALGAL BIOMASS FOR COMPONENTS OF THE DIET IN CELSS
A. R. KAMAREI, Z. NAKHOST, and M. KAREL (MIT, Cambridge, MA) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 12 p. NASA-supported research. refs
(SAE PAPER 851388)

Techniques which eliminate or reduce the undesirable cell components of algae and enhance the potential nutritional and organoleptic acceptability of algae products are studied. The cell walls, nucleic acids, and pigments and lipids of the green algae Scenedesmus obliquus need to be removed. The procedures for determining the composition of proteins, pigments and lipids, and moisture and ash are described. Chemical, enzymatic, and physical methods of removing the cell wall to make the algae digestable are analyzed; a homogenization technique is utilized. The problems encountered if algae nucleic acids are ingested directly are discussed; the reduction of DNA and RNA by applying extracellular DNase and RNase to the nucleic acids is examined. The color and flavor of the algae are enhanced with the extraction of pigments and lipids from the algae protein concentration. I.F.

A86-23569
BLSS, A EUROPEAN APPROACH TO CELSS
A. I. SKOOG (Dornier System GmbH, Friedrichshafen, West Germany) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 13 p.
(SAE PAPER 851391)

The development of a biological life support system (BLSS) for space is examined. The proposed design for the BLSS is a closed loop system which supplies O2, food, and water, and maintains a balanced, stable spacecraft ecology. The terrestrial and space experiments, which focus on cultivating plants that will provide the crew with an adequate food supply, designing and testing of a terrestrial reference system, microgravity and cosmic radiation effects, and the use of PAR-radiation and high energy particle radiation protection, are studied. The functions of the Solar Plant Power Facility are investigated. The closed loop ecological life support system (ELSS) created by the ELSS technology study is analyzed. I.F.

A86-23570
CELSS EXPERIMENT MODEL AND DESIGN CONCEPT OF GAS RECYCLE SYSTEM
K. NITTA, M. OGUCHI (National Aerospace Laboratory, Tokyo, Japan), and S. KANDA (Kawasaki Heavy Industries, Ltd., Submarine Designing Dept., Kobe, Japan) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 14 p. refs
(SAE PAPER 851393)

In order to prolong the duration of manned missions around the earth and to expand the human existing region from earth to other planets such as a Lunar Base or a manned Mars flight mission, the CELSS becomes an essential factor of the future technology to be developed through utilization of the Space Station. The preliminary system engineering and integration efforts regarding CELSS have been carried out by the Japanese CELSS concept study group for clarifying the feasibility of hardware development for Space Station Experiments and for getting the time phased mission sets after Fy 1992. The results of these studies are briefly summarized, and the design and utilization methods of a gas recycle system for CELSS experiments are discussed. Author

A86-23571
UTILIZATION OF MEMBRANES FOR H2O RECYCLE SYSTEM
H. OHYA (Yokohama National University, Japan) and M. OGUCHI (National Aerospace Laboratory, Chofu, Japan) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 9 p.
(SAE PAPER 851394)

Conceptual studies of closed ecological life support systems (CELSS) carried out at NAL in Japan for a water recycle system using membranes are reviewed. The system will treat water from shower room, urine, impure condensation from gas recycle system, etc. The H2O recycle system is composed of prefilter, ultrafiltration membrane, reverse osmosis membrane, and distillator. Some results are shown for a bullet train of toilet-flushing water recycle equipment with an ultrafiltration membrane module. The constant value of the permeation rate with a 4.7 sq m of module is about 70 l/h after 500 h of operation. Thermovaporization with porous polytetrafluorocarbon membrane is also proposed to replace the distillator. Author

A86-23575
WET-OXIDATION WASTE MANAGEMENT SYSTEM FOR CELSS
Y. TAKAHASHI (Niigata University, Japan) and H. OHYA (Yokohama National University, Japan) AIAA, SAE, ASME, AIChE, and ASMA, Intersociety Conference on Environmental Systems, 15th, San Francisco, CA, July 15-17, 1985. 10 p.
(SAE PAPER 851398)

A wet oxidation system which is to treat organic wastes and redistribute inorganic compounds and elements is examined. The effect of temperature and reaction time on the solubility of carbon, nitrogen, and phosphorus in the oxidized water is investigated. The application of noble gas catalysts to the carbon and nitrogen reactions, and the need to develop catalysts which will complete oxidation and nitrification are analyzed. The behavior of metals in wet oxidation is studied. I.F.

A86-23701
HUMAN FACTORS SOCIETY, ANNUAL MEETING, 28TH, SAN ANTONIO, TX, OCTOBER 22-26, 1984, PROCEEDINGS. VOLUMES 1 & 2
E. A. ALLUISI, ED. (USAF, Human Resources Laboratory, Brooks AFB, TX), M. J. ALLUISI, ED., and S. DE GROOT, ED. Santa Monica, CA, Human Factors Society, 1984. Vol. 1, 566 p.; vol. 2, 505 p. For individual items see A86-23702 to A86-23750.

Developments regarding methods and techniques are considered along with human factors in falls of the elderly, prototyping and design of computer systems, consumer product design, human factors in system safety and robotics, visual performance and display design, mental models, the selection and evaluation of computer systems, programs and techniques in human factors education, industrial ergonomics, and industrial safety. Topics related to human factors and nuclear power are discussed, taking into account a systems approach to improved operations, a maintenance personnel performance simulation model, and nuclear power plant control room operators' performance research. Attention is also given to visual display design, computer displays, new alternatives in managing human factors and human resources functions, army aviation selection and training, visual detection and tracking, applications of fuzzy sets and systems methodologies in human factors, human factors and automation technology, computer based training, and human factors in computerized I/O communications products. G.R.

A86-23702
THE EFFECT OF ASYMMETRIC TRANSFER ON DUAL-TASK ASSESSMENT OF VOICE TECHNOLOGY
D. L. DAMOS and E. A. LYALL (Arizona State University, Tempe) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 21-25.
(Contract N00014-82-C-0179)

This experiment examines the effect of asymmetric transfer on multiple-task performance in a voice technology study. Male subjects performed a mental arithmetic and a visual memory task alone and together. Stimuli for the mental arithmetic task were presented either visually or auditorily; responses were made either vocally or manually. Stimuli for the visual memory task were always presented visually; responses were always made manually. Preliminary analyses revealed a number of statistically significant effects favoring auditory input and speech response. However, these analyses also revealed asymmetric transfer between response conditions. When the data affected by the asymmetric transfer were eliminated from subsequent analyses, no significant advantages for speech over manual response were found. The significance of these results for voice technology studies is discussed. Author

A86-23703
AN EMPIRICAL DEMONSTRATION OF MULTIPLE RESOURCES
W. L. DERRICK and T. M. MCCLOY (U.S. Air Force Academy, Colorado Springs, CO) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 26-30. USAF-supported research.

Results obtained by Gopher et al. (1982) suggest that evidence for multiple processing resources can be demonstrated only if both task difficulty and task priorities are manipulated in dual task studies. The present paper reports an experiment which was to replicate the study conductd by Gopher et al. Ten right-handed male subjects participated in the experiment. The subjects performed a dual-axis compensatory tracking task of first order

dynamics using a joystick with their right hand. A noise generator randomly perturbed the signal to be tracked. The results obtained in the experiment essentially replicate the findings reported by Gopher et al. Inspection of the Performance Operating Characteristics (POC) functions from both studies, however, suggests that more than two resources are involved. G.R.

A86-23704
A TECHNOLOGY FORECASTING AND ASSESSMENT METHOD FOR EVALUATING SYSTEM UTILITY AND OPERATOR WORKLOAD

R. G. EGGLESTON and P. V. KULWICKI (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 31-35.

In the context of system design, technology assessment often proceeds in a bottom-up fashion, beginning with an evaluation of individual candidate system technologies. Issues of technology integration and human factors considerations are not addressed until later in system development. This paper proposes the use of a top-down approach to technology assessment. The top-down approach has the advantage of evaluating technologies along dimensions of system utility, as well as technical performance, and treating human factors early in conceptual design. A technology forecasting and assessment methodology is described wherein technologies can be evaluated quantitatively in terms of technical performance, system utility, and operator workload. Author

A86-23707
A COMPUTER-BASED SYSTEM FOR WORKSTATION DESIGN AND ANALYSIS

L. C. BUTTERBAUGH and J. K. MCBRIDE (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 63-66. refs

The design of aircraft crew stations, powerplant control room consoles, and other man-machine systems is a complex task which includes also the consideration of a number of human factors issues. As traditional design approaches require much time and considerable expenditures of manpower, the employment of computer-based methods has been considered to achieve a more efficient and effective crew station design process. Thus, numerous compter aided design and evaluation techniques (CADETs) have been developed which can be used for the design and the evaluation of man-machine systems from a human factors standpoint. In an effort to upgrade the tools and methods available to the designers and human factors engineers of the Crew Systems Development Branch of the U.S. Air Force, the relative merits of a wide variety of CADETs were discussed at a workshop. The present paper is concerned with these discussions and the resulting conclusions. G.R.

A86-23711
EYE-CONTROLLED SWITCHING FOR CREW STATION DESIGN

G. L. CALHOUN, K. R. BOFF (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH), and C. J. ARBAK (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 258-262. refs
(Contract F33615-82-C-0511)

Integration of eye and head position monitoring devices may enable practical control of systems using the operator's eye line-of-sight (LOS) under conditions of free head and eye movement. This paper describes the components of an eye-control system developed to examine the use of eye LOS as an alternate control interface for crew station design. The implications of the performance of this system to the implementation of eye-controlled switching are discussed. Author

A86-23712
THE EFFECTS OF REDUNDANCY, TARGET DENSITY AND PRACTICE ON A COMPLEX VISUAL SEARCH TASK

M. J. PATTERSON, W. J. ENGELMAN, L. J. NAJJAR, and G. M. CORSO (Georgia Institute of Technology, Atlanta) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 299-302. refs

In connection with increased prevalence of visual display units, the search and acquisition of information in various visual displays has become increasingly important. Often color is combined with another dimension to produce a redundant code which may improve performance above that obtained in the case of the single original dimension. There is, however, conflicting evidence on the efficacy of the use of a redundant code in a visual search task. The present paper is concerned with an experiment which was designed to investigate redundant coding in an ATC simulation. The primary objective of this study was to increase the transmission of the displayed information. The study involved the examination of redundant code (color with alphanumerics) versus an achromatic, uni-dimensional code in a visual search task. It is concluded that the inclusion of color will not necessarily improve performance within visual tasks of this type. G.R.

A86-23713
COLOR CODING OF SYNTHETIC APERTURE RADAR IMAGERY

F. WARD, D. WILSON (Wright State University, Dayton, OH), D. WALLQUIST, and G. KUPERMAN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 303-307. refs

The purpose of the study was to investigate four types of coding strategies using the same Synthetic Aperture Radar (SAR) imagery. Unclassified SAR imagery were digitized to include scenes from urban areas, seaports, oil refineries, industrial sites, an airfield, and power transmission lines. Two color and two black and white (BW) coding schemes were applied to the imagery. Five experienced radar interpreters were briefed and viewed 35 mm slides of the imagery. They judged image usefulness by reference to an interpretability scale. Analysis of the ratings showed that the BW codes received significantly higher interpretability ratings than the color codes. Author

A86-23723
COGNITIVE ATTRIBUTES TO GUIDE DISPLAY DESIGN IN AUTOMATED COMMAND-AND-CONTROL SYSTEMS

E. D. MURPHY (Computer Sciences Corp., Silver Spring, MD) and C. M. MITCHELL (Georgia Institute of Technology, Atlanta) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 418-422. refs

The capacity of the short-term and working memory is examined. The need for display designs which activate the appropriate schema and initiate effective cognitive processing is discussed. The relationship between cognitive attributes, such as hierarchical organization of knowledge, failure-driven memory, multilevel processing, and strategic problem solving and display designs is analyzed. The effect of automation on these attributes is studied. I.F.

A86-23724
COCKPIT AUTOMATION TECHNOLOGY

A. J. ARETZ (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1984, p. 487-491.

This paper presents a prototype methodology conceived by the United States Air Force to establish a baseline approach in the development of a new human factors crew station design methodology for emerging weapon systems. The goal of the project is to develop a structured human factors design methodology that

can be used by designers to assess emerging technologies and relate them to system requirements and human performance characteristics so that the features of the resulting designs satisfy specific operational mission objectives. Author

A86-23734
MESSAGE-BASED SCREEN INTERFACES - THE EFFECTS OF PRESENTATION RATES AND TASK COMPLEXITY ON OPERATOR PERFORMANCE
R. HALSTEAD-NUSSLOCH and R. E. GRANDA (IBM Corp., Human Factors Development Dept., Poughkeepsie, NY) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 740-744.

The present experiments investigated the effects of varying message-presentation rate and task complexity on human performance. Variables examined in the experiments included message rate, message presentation format, probability of a target message, and number of response alternatives for target messages. Response accuracy was used as a measure of operator performance. Significant main effects were obtained on all independent variables, except format of message flow. Increasing the message rate, target probability, and number of target categories resulted in poorer accuracy. In general, decreases in accuracy were accentuated when two or more of the manipulated factors were increased. This negative synergism must be taken into account in designing a user-system interface for control systems based on textual-message communications. Author

A86-23735
RESEARCH ISSUES IN TELEOPERATOR SYSTEMS
R. L. PEPPER and J. D. HIGHTOWER (U.S. Naval Ocean Systems Center, Kailua, HI) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 803-807. refs

Existing teleoperators have been very useful in providing support to the offshore oil industry and the salvage community. However, there is a fundamental limitation. These teleoperators are designed to perform only a very restricted range of specific tasks, and unanticipated events can occur which severely tax these specialized teleoperators' capabilities and render them ineffective. It is, therefore, felt that anthropomorphically-designed teleoperators offer the best means of transmitting man's remarkably adaptive problem solving and manipulative skills into the oceans' depths. Several approaches toward the goal of a mature teleoperator technology are identified. Attention is given to teleoperator viewing systems, the possible advantages of using motion parallax cues as an aid to depth perception, and efforts toward the creation of a general model of anthropomorphic teleoperator performance. G.R.

HUMAN OPERATOR CONTROL OF A BILATERAL TELEOPERATOR IN PART-SIMULATION OF ZERO GRAVITY
K. CORKER (California Institute of Technology, Jet Propulsion Laboratory, Pasadena) and J. REGER (California State University, Northridge) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 810-814. NASA-supported research. refs

Remote manipulators (teleoperators) are defined as mechanical devices which extend human manipulative ability to operational environments which are either hostile to or remote from the human operator. Teleoperation involves the explicit and active inclusion of the human operator (HO) in the system control loop. An investigation of human/teleoperator control interactions in the orbital operational environment has been conducted, taking into account the employment of a model describing human neuromotor control as a linear damped harmonic oscillator. The application of this model for the specification of the end point position in teleoperator control is explored, and two experiments are conducted. The results indicate the potential utility of relatively simple models of neuromotor control processes in investigating the interaction of the human operator and controller in teleoperation. G.R.

A86-23737
A DIGITAL IMAGE PROCESSING FACILITY FOR HUMAN FACTORS RESEARCH
G. G. KUPERMAN, D. L. WALLQUIST (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH), and L. KATZ (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 815-819. refs

In human factors research, it is often necessary to obtain highly controlled, visual stimulus materials for use in the operator performance studies. In this context, it has been found that digital image processing system capabilities provide the human factor practitioner with powerful techniques for application against a wide range of problems. The Visual Image Processing, Enhancement, and Reconstruction (VIPER) facility was, therefore, established to identify, develop, and apply digital image processing techniques against a variety of Air Force research objectives. The present paper provides an overview of digital image processing, and a description of the VIPER facility. Attention is also given to current and planned examples involving the application of digital image processing to human factors engineering problems. G.R.

A86-23738
CONCEPT FLYING - A METHOD FOR DERIVING UNIQUE SYSTEM REQUIREMENTS
J. C. SIMONS and S. B. HOTTMAN (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 825-828. refs

Simons (1974) discussed an approach to achieving concept breakthroughs by inserting intuitive researchers in loosely structured, scaled-down situations. The approach involves the observation of the pilot when he is interacting in a loosely constrained operational environment. The considered approach, called 'concept flying', represents a technique for the development of new systems designs. Today the main shortfall of concept flying techniques is that they are seldom used. The present paper provides successful concept-flight programs, and new proposals for using concept flying in a study of concepts which are beyond the capabilities of current aircraft. G.R.

A86-23742* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
SPACE STATION CREW SAFETY - HUMAN FACTORS MODEL
M. M. COHEN and M. K. JUNGE (NASA, Ames Research Center, Moffett Field, CA) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 908-912. Previously announced in STAR as N85-29540.

A model of the various human factors issues and interactions that might affect crew safety is developed. The first step addressed systematically the central question: How is this Space Station different from all other spacecraft? A wide range of possible issue was identified and researched. Five major topics of human factors issues that interacted with crew safety resulted: Protocols, Critical Habitability, Work Related Issues, Crew Incapacitation and Personal Choice. Second, an interaction model was developed that would show some degree of cause and effect between objective environmental or operational conditions and the creation of potential safety hazards. The intermediary steps between these two extremes of causality were the effects on human performance and the results of degraded performance. The model contains three milestones: stressor, human performance (degraded) and safety hazard threshold. Between these milestones are two countermeasure intervention points. The first opportunity for intervention is the countermeasure against stress. If this countermeasure fails, performance degrades. The second

opportunity for intervention is the countermeasure against error. If this second countermeasure fails, the threshold of a potential safety hazard may be crossed. R.J.F.

A86-23744
THE USE OF ACCIDENT STATISTICS TO INFLUENCE SIMULATOR DESIGN
R. P. BATEMAN and S. B. HOTTMAN (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 917-920. refs

The causes of aircraft accidents during low level operations may be categorized into five areas. These are vision, attention, knowledge, judgment, and discipline. The thesis presented in this paper is that for simulators to be effective in reducing the aircraft accident rate, they must provide training in at least one (and preferably all) of these areas. This training must include experience in preventing the occurrence of hazardous conditions, in recognizing the hazardous conditions as they develop, and in taking the appropriate corrective action to prevent an accident. For the student, all of this requires appropriate inputs, realistic scenarios, opportunity for errors, and immediate feedback on the consequences of those errors. For the instructor, there is a need to provide information on the causes of errors. Author

A86-23746
THE EFFECT OF INTERVENING TASK PERFORMANCE ON SUBJECTIVE WORKLOAD RATINGS
F. T. EGGEMEIER (Wright State University; Systems Research Laboratories, Inc., Dayton, OH), B. E. MELVILLE (Wright State University, Dayton, OH), and M. S. CRABTREE (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 954-958. refs

Thirty subjects performed a short-term memory task and used the Subjective Workload Assessment Technique (SWAT) to provide workload ratings under one of five conditions. Ratings were provided either immediately following task performance, after a delay period during which no additional tasks were performed, or after a delay period during which an additional set of memory tasks at one of three levels or difficulty was performed. Neither the delay interval nor the requirement to perform a set of intervening tasks significantly affected mean SWAT ratings relative to the immediate rating control condition. Patterns in the data suggested that performance of a set of difficult intervening tasks had the greatest tendency to affect memory task ratings, and indicate that the potential influence of intervening task performance should not be completely discounted in workload rating scale applications. Author

THE USE OF REFLECTIVE SWAT FOR WORKLOAD ASSESSMENT
C. J. ARBAK, R. L. SHEW, and J. C. SIMONS (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 959-962. refs
(Contract F33615-82-C-0511)

Reid et al. (1981) have proposed the Subjective Workload Assessment Technique (SWAT) as a generally applicable measure of operator workload. The SWAT technique applies the mathematics of conjoint measurement to assign a single measure of workload based on task ratings in three categories, including time, effort, and stress. It is pointed out that SWAT has typically been used to assess workload at a particular point in an ongoing or just completed task. In the present paper, the term immediate or in-flight SWAT is employed in connection with such an application. In many cases, however, it would be useful to be able to evalate workload through the operator's reflections on mission performance rather than through an immediate rating of workload. Advantages of such a 'reflective SWAT' are related to the possibility of an estimate of workload which reflects a more general set of conditions. In this paper, two examples of the use of reflective SWAT in combination with an interview are discussed. G.R.

DEVELOPMENT OF AN AUTOMATED ANTHROPOMETRIC DATA MEASUREMENT SYSTEM (AADMS)
W. F. MORONEY, R. E. HUGHES (U.S. Navy, Naval Air Test Center, Patuxent River, MD), and R. J. SPICUZZA (Systems Research Laboratories, Inc., Patuxent River, MD) IN: Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1984, p. 1003-1005.

Due to the limited space available in modern cockpits and crewstations, certain critical anthropometric features of an aviator must be measured properly. Unreasonable and erroneous anthropometric values are sometimes recorded because of measuring and operator errors. The purpose of the Automated Anthropometric Data Measurement System (AADMS - pronounced ADMAS) is to reliably and accurately measure anthropometric features in a timely and efficient manner and to eliminate the source of many of these errors. AADMS utilizes a microcomputer interfaced to a variety of position sensors and transducers to gather and internally verify data on 11 anthropometric parameters. Author

PHYSIOLOGICAL INSIGHTS GAINED THROUGH ZERO-G MEDICAL RESEARCH
S. ZEIDLER Commercial Space (ISSN 8756-4831), vol. 1, Fall 1985, p. 58, 60.

The advantages medical experiments and manufacturing processes provide to the study of human physiology are investigated. The applications of electrokinetic separation in space to the isolation and examination of cell subgroups and the space electrophoresis for purification of hormones, enzymes, and proteins are discussed. The manipulation of fibrillogenensis of collagen for use as a replacement tissue or in surface tension casting is being studied. Pharmaceutical participation in space research includes the production and analysis of organic crystals which provide information on the molecular structure that is utilized in drug design and protein engineering. Electrophoresis experiments which are being conducted in space are examined. A study to evaluate if purification techniques for human growth hormones are more effective in space is described. I.F.

SODIUM AND POTASSIUM RECYCLE IN CLOSED ECOSYSTEM-SPACE AGRICULTURE
M. YAMASHITA, H. OHYA, K. NITTA, and M. YATAZAWA Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 33, no. 376, 1985, p. 288-296. In Japanese, with abstract in English. refs

Sodium and potassium separation is studied for a closed ecological life support system (CELSS) and space agriculture program. The purpose of the system is to recycle minerals between man and higher plants in a closed system. For physiological reasons, man requires a greater amount of sodium than that contained in plants. For regenerative production of foods by the use of higher plants, it is necessary to remove excess sodium from human wastes. Several kinds of physicochemical and biological methods are discussed to examine their feasibility in this application. Author

ON THE PILOT'S BEHAVIOR OF DETECTING A SYSTEM PARAMETER CHANGE
N. MORIZUMI and H. KIMURA Japan Society for Aeronautical and Space Sciences, Journal (ISSN 0021-4663), vol. 33, no. 380, 1985, p. 532-539. In Japanese, with abstract in English. refs

This paper deals with the detection characteristics of a human pilot, who is engaged in a compensatory control, to a sudden change in the controlled element's characteristics. Taking the case where the change manifests itself as a variance change of the monitored signal, it is shown that the detection time, defined to be the time elapsed until the pilot detects the change, is related to the monitored signal and its derivative. Then, the detection behavior is modeled by an optimal controller, an optimal estimator, and a variance-ratio test mechanism that is performed for the monitored signal and its derivative. Results of a digital simulation show that the pilot's detection behavior can be well represented by the model proposed here. Author

NOISE LEVELS IN COCKPITS OF AIRCRAFT DURING NORMAL CRUISE AND CONSIDERATIONS OF AUDITORY RISK
D. C. GASAWAY (Cabot Corp., E-A-R Div., Indianapolis, IN) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 103-112. refs

Noise data, including A-levels and C-minus-A values, are summarized for exposures associated with normal cruise flight in 13 groups of 593 aircraft; means and standard deviations are reported; degrees of auditory risk using OSHA-1983 criterion are presented; and at-the-ear protected and unprotected exposures are revealed. Mean A-levels were 95.0 for 528 fixed-wing; 100.9 for 65 rotary-wing; and 95.7 for all 593 aircraft. Of 13 subgroups, the lowest mean A-level (85.5) was exhibited in the cockpits of tail-mounted turbojet/fan-powered aircraft, and the highest (105.0) was found in both reciprocating and turbine-powered twin-rotor helicopters. All means A-levels exceeded the OSHA damage-risk criterion for 8 h/d exposures. At-the-ear exposures while wearing hearing protection are presented. Results clearly illustrate the potential for auditory damage of unprotected aircrews. Hearing protection must be considered to effectively control routinely encountered exposures. The material and illustrations resulting from this study will help health and safety monitors during indoctrination and counseling of aircrews concerning the need to protect their hearing against noise exposures during normal and routine flight operations. EFFECT OF SEAT CUSHIONS OF HUMAN RESPONE TO +GZ IMPACT
B. F. HEARON and J. W. BRINKLEY (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 113-121. refs
(Contract F33615-83-C-0500)

Several ejection seat cushions are evaluated based on human response to vertical impact acceleration. The cushions consist of: (1) one layer of 5.1 cm thick low-density conventional polyurethane foam and a second layer of 1.3 cm thick high-density plastic foam (F-111 cushion); (2) a layer of 1 cm thick sheet foam polyethylene, 1.3 cm Temper foam, and 0.6 cm thick space fabric (ACES II cushions); and (3) 5.1 cm thick rate-dependent slow-recovery polyurethane foam. Vertical impact tests were performed on 25 subjects of 26.1 + or - 3.4 years, weighing 79.1 + or - 9.0 kg, and 178 + or - 7.1 cm tall; the test conditions and equipment are described. The carriage acceleration and velocity, seat loads, and head and chest acceleration are measured and compared. The data reveal that the F-111 and ACES II cushions have higher seat loads and head and chest accelerations than the rate-dependent polyurethane foam cushions; it is concluded that the rate-dependent cushions provided greater impact protection than current operational cushions. I.F.

EFFECT OF WEARING CHEMICAL PROTECTIVE CLOTHING IN THE HEAT ON SIGNAL DETECTION OVER THE VISUAL FIELD
J. L. KOBRICK and L. A. SLEEPER (U.S. Army, Army Research Institute of Environmental Medicine, Natick, MA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, Feb. 1986, p. 144-148. refs

Sensitivity for detecting visual signals distributed at various locations throughout the visual field was studied in 16 male subjects who were all exposed to two degrees of ambient heat (91 F/61 percent RH; 55 F/35 percent RH) while wearing the Army chemical protective clothing system; also to 70 F/35 percent RH while wearing Army battle-dress uniform (fatigues). Response time for signal detection increased systematically and significantly with peripheralization of stimulus locations. It was most impaired in the superior and inferior visual field areas and least affected along the horizontal axis area. The data support previous results obtained using this task. Both the Military Oriented Protective Posture (MOPP) and the heat + MOPP exposure conditions produced highly significant systematic increases in response time to all signals; the worst performance occurred under the heat + MOPP combination. Implications for visual performance while wearing chemical protective gear are discussed. Author

AEROSPACE BEHAVIORAL ENGINEERING TECHNOLOGY CONFERENCE, 3RD, LONG BEACH, CA, OCTOBER 15-18, 1984, PROCEEDINGS
Conference sponsored by SAE. Warrendale, PA, Society of Automotive Engineers, Inc., 1984, 322 p. For individual items see A86-26002 to A86-26033.
(SAE P-151)

The topics addressed include the use of flight deck technology to complement the flight crew's role in automation; pilot-machine cooperation in presence of mission uncertainty in connection with military cockpit design; current and advanced displays; pilot workload and performance; and civil aviation human performance issues. Additional subjects include the Air Force test pilot's perspective of the man/machine interface; man/machine interface research and development needs for civil aviation; fitness for duty; safety assurance in the air carrier operating environment; advanced technology for rotorcraft; and a case for realistic training in abnormal and emergency situations. In addition, papers are presented on questions of flight deck automation decisions, effect of vibration on the readability of color CRT displays, the training and certification of the general aviation pilot, and effects of digital altimetry on pilot workload. I.S.

FLIGHT DECK AUTOMATION DECISIONS
E. F. WEENER (Boeing Commercial Airplane Co., Seattle, WA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 3-8. refs
(SAE PAPER 841471)

Effective man-machine interface design for an airplane flight deck depends strongly on providing appropriate levels of control capability for use by the flight crew. The range of control options available to the airplane system designer extends from manual through partially automatic to full automatic. Selection of appropriate types and levels of automation for each new airplane is a complex task. It involves understanding the capabilities and limitations of the human operator, airplane operational and functional considerations, as well as concerns for cost and available technology. Recent airplanes have demonstrated the practicality of providing different levels of automation which can be applied by the flight crew under different circumstances. This trend expands the options available to the flight crew in coping with the changing operational environment. It also allows the flight crew to participate directly in the choice of when and how to apply automation. This paper describes the various automation factors which are considered in the process of developing a design. Author

FLIGHT DECK DESIGN METHODOLOGY USING COMPUTERIZED ANTHROPOMETRIC MODELS
G. STONE and H. MCCAULEY (Douglas Aircraft Co., Long Beach, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 9-16. refs
(SAE PAPER 841472)

A new 'inside out' flight deck design methodology has been developed, in which the flight crew member is the logical starting point. Several computer models that simulate varying pilot sizes, proportions, reach, and vision capabilities are created and utilized to generate the required 'envelopes' of vision, reach, and motion for the entire range of the pilot population. These envelopes are then employed to define the internal geometric relationships of the flight deck and its components. The methodology is described, including discussions of the aspects of defining the user population, generation of crew sample, creating a three-dimensional operator model, determining functional envelopes, and component integration. Design diagrams are included. I.S.

AI APPLICATIONS TO MILITARY PILOT DECISION AIDING - A PERSPECTIVE ON TRANSITION
W. G. JAMES (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 19-24.
(SAE PAPER 841533)

The process of transition of the Pilot Decision Aiding AI technology to operational application is discussed in the framework of various R&D programs. The experience of implementing the 'intent-driven' cockpit technology in a Coast Guard helicopter and in simulation and flight test programs is described. A priority list of the subsystems and activities sufficiently mature for early automation and decision aiding is given, and the three consecutive steps to be taken for the transition ('Imitate', 'Embellish', and 'Fully Exploit') are explained. The importance of an airborne development program that precedes the flight evaluation program is emphasized. I.S.

AUTOMATION IN THE COCKPIT - WHO'S IN CHARGE?
R. W. MOSS, J. M. REISING, and N. R. HUDSON (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 25-29. refs
(SAE PAPER 841534)

This paper discusses levels of automation and decision making and arrives at an overall design philosophy for allocating tasks to the pilot and the computer. In order to produce a levels of automation matrix three categories of pilot-computer interface (pilot only, blended, and computer only) and three types of goals, (mission, functional and task), are identified. These two dimensions are then used to create a matrix which can be employed as a means of comparing automated systems. The options that the matrix produces are discussed and examples given. The overall design philosophy is to have the mission goals accomplished in a blended manner with both the pilot and computer contributing. Lower level goals are handled exclusively by the computer. The reasoning for this philosophy is to allow the pilot to operate in a rule-based environment so that he can optimally cope with the greatly increased amounts of information he will face in future missions. EFFECT OF VIBRATION ON THE READABILITY OF COLOR CRT DISPLAYS
L. IVEY (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 53-59. refs
(SAE PAPER 841466)

The readability of symbols on a color CRT display in a vibrational environment equivalent to low-level flights was rated by eight aircraft personnel subjects undergoing tests in a Sixmode motion simulator. The differences in the values of the chrominance and luminance between static and vibrational conditions were determined. In addition, the impact of wearing protective PLZT goggles was evaluated. The comfortable viewing zone for the normal (non-PLZT) case was between 2.5 and 6.5 Hz, whereas the zone with PLZT was between 3 and 6.5 Hz. The colors and symbol changes caused by the applied vibration were acceptable, indicating the stability of the Sperry CRT shadow mask. The legibility data indicate that in a vibration environment, a minimum symbol size of greater than 0.12 in. is necessary. The digital update rate change should be between 3 and 5 Hz for the most comfortable viewing and the least errors. I.S.

A86-26016
A REVIEW OF PILOT WORKLOAD MEASUREMENT TECHNIQUES USED ON THE A-10 SINGLE SEAT NIGHT ATTACK TEST PROGRAM
C. D. CRITES (USAF, Human Factors Branch, Edwards AFB, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 107-112.
(SAE PAPER 841492)

A three-phase flight test program to evaluate the A-10 Single Seat Night Attack (SSNA) aircraft was conducted at the Air Force Flight Test Center (AFFTC), Edwards AFB, CA. An important objective of the SSNA testing was to assess, and where possible, measure pilot workload. The techniques utilized during the test program to quantify workload were: an objective measurement of task performance, control activity, and physiological status data, and the Subjective Workload Assessment Technique (SWAT). The use of objective techniques represented the first application in a flight test environment and an initial attempt to validate their use as work-load metrics. Both objective and subjective methods were of significant value, but both techniques had limitations and shortfalls. Lessons learned affecting the application of the techniques to on-going and future flight test programs are described. Author

A86-26018
ADVANCED FIGHTER TECHNOLOGY INTEGRATION (AFTI) F-16 - THE PILOT INTERFACE
D. R. MCMONAGLE (USAF, Flight Test Center, Edwards AFB, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 121-125.
(SAE PAPER 841633)

The aspects of the pilot-vehicle interphase in the two first phases of the Advanced Fighter Technology Integration (AFTI)/F-16 Program, which was designed to develop and demonstrate technologies and alternatives for future fighter aircraft design, are discussed. The results of the first AFTI phase, the Digital Flight Control System, indicated the need for multiple flight control mode capability in future multirole fighter aircraft. The second phase of the Program, the Automated Maneuvering Attack System, which began in July 1984, involves the development and evaluation of improved sensors, integrated fire and flight control for automated maneuvering weapon delivery, and enhancements in pilot-vehicle interface. WINGING IT IN THE 1980'S - WHY GUIDELINES ARE NEEDED FOR COCKPIT AUTOMATION
M. R. HOAGLAND (Air Line Pilots Association, International, Washington, DC) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 155-162. refs
(SAE PAPER 841634)

There have been many reasons for the introduction of automation into the cockpit of the modern airliner. In some cases the forces driving technology have caused the design of automated systems which compromise the ability of the pilot to fulfill his responsibilities for the safety of the airplane under his command. This paper examines how these forces can lead to unnecessary cockpit automation, and discusses what must be done to avoid the introduction of automated systems which have the effect of removing the human operator from the information and control processes. Author

A86-26023
SITUATION VERSUS COMMAND
J. G. OLIVER (Air Line Pilots Association, International, Washington, DC) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 163-165.
(SAE PAPER 841638)

Two types of flight information are provided to pilots, situational and command. Situation information tells the pilot the state of the aircraft and its flight path while command information tells the pilot what to do and is not related to any given situation. This paper discusses why it is extremely important for the pilot to be provided with appropriate and adequate situation information in all aircraft but especially in modern highly-automated aircraft. Author

COMPARISON OF VOICE TYPES FOR HELICOPTER VOICE WARNING SYSTEMS
C. A. SIMPSON, K. MARCHIONDA-FROST, and T. NAVARRO (Psycho-Linguistic Research Associates, Menlo Park, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 217-224. Army-supported research. refs
(Contract NAS2-11341)
(SAE PAPER 841611)

Three related studies were conducted to compare different types of human voice warnings. In the first study, a comparison of three LPC-encoded voices, human female, human male, and phoneme-synthesized, by the criteria of pilot flight task performance showed no differences due to the voice type. In the second study, pilots' preferences were investigated, by comparing preference for direct synthesized speech to the LPC-encoded human female speech and to LPC-encoded synthesized speech. Most pilots were found to prefer direct synthesized speech over both LPC-encoded human female speech and the LPC-encoded synthesized speech. In the third study, phonetically balanced (PB) words heard in simulated helicopter noise were used to compare the intelligibility of direct synthesized and LPC-encoded phoneme-synthesized speech types. PB word intelligibility was found to be better for direct synthesized speech than for the LPC-encodes synthesized speech. I.S.

A86-26031
ADVANCED TECHNOLOGY - NEW FIXES OR NEW PROBLEMS?
C. A. SIMPSON (Psycho-Linguistic Research Associates, Menlo Park, CA) IN: Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1984, p. 225-236. refs

The principles of application of voice technology to cockpit control and display systems, the advantages of its use and the pitfalls of its misuse or overuse are discussed. The omnidirectionality and the sequential nature of speech imply the general requirements of short sentences, the minimal number of multiple messages, and avoidance of concurrent messages in the use of voice for both display and command purposes. To be of an advantage to the pilot, the use of voice displays must be limited to time-critical flight information, and the use of voice control must be limited to time-critical operations, both at the time when the pilot is visually or manually occupied to the extent that the voice display/command will reduce his workload. Especially important will be an integrated design of all voice controls and displays in order to avoid overloading the pilot with multiple messages and required control inputs, in a transmission mode that is essentially a single-channel system. I.S.

SERVO OPERATED ANTI-G SUIT PRESSURIZATION SYSTEM Patent
R. J. CROSBIE and P. R. EDWARDS, inventors (to Navy) 13 Aug. 1985 7 p Supersedes AD-D011468
(AD-D011932; US-PATENT-4,534,338; US-PATENT-APPL-SN-613497; US-PATENT-CLASS-128-1)
Avail: US Patent and Trademark Office CSCL 06Q

A servo operated system for controlling pressurization of an aircraft pilot's anti-G suit during high energy maneuvers has a servo operated control valve and a feedback loop controller for minimizing pressure lag in the suit. The controller has dual modes of operation: one for normal flight conditions and one for combat flight conditions. The normal flight mode provides nominal G-protection while the combat mode provides faster response by prepressurizing the anti-G suit to a base level and lowering the G-force threshold. While in the combat mode, the crewman may select an adjustment pulsating signal to be superimposed on the prepressurization level to obtain additional comfort. Alternatively, he may select a superimposed pulsating signal which is synchronized with his own heartbeat to reinforce the pumping action of the heart. GRA

Methods are suggested for promoting continual growth in space station automation and robotics. Initial operation capability (IOC) space station design criteria are emphasized that will allow for ever-increasing levels of automation. The required technology advancement in robotics are described. The need is explained for improved human-machine interfaces, manipulators and sensors, and their combination with Earth developed robot technology into hybrid systems. The needed research base in computer science, artificial intelligence, and applied mathematics is discussed. Effects on private and Government Sectors are explained. It is shown that the Station will provide broader opportunities in time, space and society. Organizational recommendations are given for meeting Congressional goals for space station automation and robotics. DOE

BLSS, A EUROPEAN APPROACH TO CELSS
A. I. SKOOG *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 23-33 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Several studies have revealed the benefits of a biological life support system (BLSS) in space stations. Problem areas requiring experimental and analytical investigations necessary for the development of BLSS have been identified. The nature of these problems allows for the classification into near-term (prepilot) and long-term (pilot) studies, and into terrestrial and space research programmes. The knowledge of planned European and U.S. space experiments allows for a coordination with existing Spacelab and Shuttle programmes to avoid duplication of research efforts. The Japanese also plan biological experiments on Spacelab in 1988. Coordinating efforts should provide answers to certain BLSS relevant questions. Major areas which need immediate attention are: micorgravity effects; cosmic radiation effects; use of PAR-radiation and high energy particle radiation protection; and monitoring and control (including sensor technology). In order to prolong the duration of manned missions around the Earth and to expand the human existing region from the Earth to other planets such as a Lunar Base or a manned Mars flight mission, the controlled ecological life support system (CELSS) becomes an essential factor of the future technology to be developed through utilization of space station. The preliminary system engineering and integration efforts regarding CELSS have been carried out by the Japanese CELSS concept study group for clarifying the feasibility of hardware development for Space station experiments and for getting the time phased mission sets after FY 1992. The results of these studies are briefly summarized and the design and utilization methods of a Gas Recycle System for CELSS experiments are discussed. Author

UTILIZATION OF MEMBRANES FOR H2O RECYCLE SYSTEM
H. OHYA and M. OGUCHI (National Aerospace Lab., Tokyo, Japan) *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 47-53 Jan. 1986
Avail: NTIS HC A99/MF A01 CSCL 06K

Conceptual studies of closed ecological life support systems (CELSS) carried out at NAL in Japan for a water recycle system using membranes are reviewed. The system will treat water from shower room, urine, impure condensation from gas recycle system, and so on. The H2O recycle system is composed of prefilter, ultrafiltration membrane, reverse osmosis membrane, and distillator. Some results are shown for a bullet train of toilet-flushing water recycle equipment with an ultraviltration membrane module. The constant value of the permeation rate with a 4.7 square meters of module is about 70 1/h after 500th of operation. Thermovaporization with porous polytetrafluorocarbon membrane is also proposed to replce the distillator. Author

THE C23A SYSTEM, AN EXMAPLE OF QUANTITATIVE CONTROL OF PLANT GROWTH ASSOCIATED WITH A DATA BASE
M. ANDRE, A. DAGUENET, D. MASSIMINO, and A. GERBAUD *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 55-64 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The architecture of the C23A (Chambers de Culture Automatique en Atmosphere Artificielles) system for the controlled study of plant physiology is described. A modular plant growth chambers and associated instruments (I.R. CO2 analyser, Mass spectrometer and Chemical analyser); network of frontal processors controlling this apparatus; a central computer for the periodic control and the multiplex work of processors; and a network of terminal computers able to ask the data base for data processing and modeling are discussed. Examples of present results are given. A growth curve analysis study of CO2 and O2 gas exchanges of shoots and roots, and daily evolution of algal photosynthesis and of the pools of dissolved CO2 in sea water are discussed. R.J.F.

DESCRIPTION OF CONCEPT AND FIRST FEASIBILITY TEST RESULTS OF A LIFE SUPPORT SUBSYSTEM OF THE BOTANY FACILITY BASED ON WATER RECLAMATION

H. R. LOESER *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 65-76 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The Botany Facility allows the growth of higher plants and fungi over a period of 6 months maximum. It is a payload planned for the second flight of the Eureca platform around 1990. Major tasks of the Life Support Subsystem (LSS) of the Botany Facility include the control of the pressure and composition of the atmosphere within the plant/fungi growth chambers, control of the temperature and humidity of the air and the regulation of the soil water content within specified limits. Previous studies have shown that various LSS concepts are feasible ranging from heavy, simple and cheap to light, complex and expensive solutions. A summary of those concepts is given. A new approach to accomplish control of the temperature and humidity of the air within the growth chambers based on water reclamation is discussed. This reclamation is achieved by condensation with a heat pump and capillary transport of the condensate back into the soil of the individual growth chamber Some analytical estimates are given in order to obtain guidelines for circulation flow rates and to determine the specific power consumption. SIMULATION MODEL FOR PLANT GROWTH IN CONTROLLED ENVIRONMENT SYSTEMS

C. D. RAPER, JR. and M. WANN *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 85-101 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The role of the mathematical model is to relate the individual processes to environmental conditions and the behavior of the whole plant. Using the controlled-environment facilities of the phytotron at North Carolina State University for experimentation at the whole-plant level and methods for handling complex models, researchers developed a plant growth model to describe the relationships between hierarchial levels of the crop production system. The fundamental processes that are considered are: (1) interception of photosynthetically active radiation by leaves, (2) absorption of photosynthetically active radiation, (3) photosynthetic transformation of absorbed radiation into chemical energy of carbon bonding in solube carbohydrates in the leaves, (4) translocation between carbohydrate pools in leaves, stems, and roots, (5) flow of energy from carbohydrate pools for respiration, (6) flow from carbohydrate pools for growth, and (7) aging of tissues. These processes are described at the level of organ structure and of elementary function processes. The driving variables of incident photosynthetically active radiation and ambient temperature as inputs pertain to characterization at the whole-plant level. The output of the model is accumulated dry matter partitioned among leaves, stems, and roots; thus, the elementary processes clearly operate under the constraints of the plant structure which is itself the output of the model. PLAN FOR CELSS TEST BED PROJECT

W. M. KNOTT *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 109-118 Jan. 1986
Avail: NTIS HC A99/MF A01 CSCL 06K

The Closed Ecological Life Support Systems (CELSS) testbed project will achieve two major goals: It will develop the knowledge and technology needed to build and test biological or combined biological physiochemical regenerative life support systems. It will fabricate, test, and operate ground based facilities to accomplish proof-of-concent testing and evaluation leading to flight experimentation. The project will combine basic research and applied research/engineering to achieve a phased, integrated development of hardware, systems, and techniques for food and oxygen production, food processing, and waste processing in closed systems. The project will design, fabricate, and operate within three years a botanical production system scaled to a sufficient size to verify oxygen and nutrient load production (carbohydrates, fats, proteins) at a useable level. It will develop within five years a waste management system compatible with the botanical production system and a food processing system that converts available biomass into edible products. It will design, construct, and operate within ten years a ground based candidate CELSS that includes man as an active participant in the system. It will design a flight CELSS module within twelve years and construct and conduct initial flight tests within fifteen years. R.J.F.

PLANT GROWTH CHAMBER M DESIGN

R. P. PRINCE and W. M. KNOTT *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 119-128 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Crop production is just one of the many processes involved in establishing long term survival of man in space. The benefits of integrating higher plants into the overall plan was recognized early by NASA through the Closed Ecological Life Support System (CELSS) program. The first step is to design, construct, and operate a sealed (gas, liquid, and solid) plant growth chamber. A 3.6 m diameter by 6.7 m high closed cylinder (previously used as a hypobaric vessel during the Mercury program) is being modified for this purpose. The chamber is mounted on legs with the central axis vertical. Entrance to the chamber is through an airlock. This chamber will be devoted entirely to higher plant experimentation. Any waste treatment, food processing or product storage studies will be carried on outside of this chamber. Its primary purpose is to provide input and output data on solids, liquids, and gases for single crop species and multiple species production using different nutrient delivery systems. R.J.F.

OPERATIONAL DEVELOPMENT OF SMALL PLANT GROWTH SYSTEMS

H. W. SCHELD (PhytoResource Research, Inc., College Station, Tex.), J. W. MAGNUSON (PhytoResource Research, Inc., College Station, Tex.), and R. L. SAUER *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 129-150 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The results of a study undertaken on the first phase of an empricial effort in the development of small plant growth chambers for production of salad type vegetables on space shuttle or space station are discussed. The overall effort is visualized as providing the underpinning of practical experience in handling of plant systems in space which will provide major support for future efforts in planning, design, and construction of plant-based (phytomechanical) systems for support of human habitation in space. The assumptions underlying the effort hold that large scale phytomechanical habitability support systems for future space stations must evolve from the simple to the complex. The highly complex final systems will be developed from the accumulated experience and data gathered from repetitive tests and trials of fragments or subsystems of the whole in an operational mode. These developing system components will, meanwhile, serve a useful operational function in providing psychological support and diversion for the crews. R.J.F.

AN ENGINEERING ANALYSIS OF A CLOSED CYCLE PLANT GROWTH MODULE
G. H. STICKFORD, JR., F. E. JAKOB, and D. K. LANDSTROM *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 159-181 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The SOLGEM model is a numerical engineering model which solves the flow and energy balance equations for the air flowing through a growing environment, assuming quasi-steady state conditions within the system. SOLGEM provides a dynamic simulation of the controlled environment system in that the temperature and flow conditions of the growing environment are estimated on an hourly basis in response to the weather data and the plant growth parameters. The flow energy balance considers the incident solar flux; incoming air temperature, humidity, and flow rate; heat exchange with the roof and floor; and heat and moisture exchange with the plants. A plant transpiration subroutine was developed based plant growth research facility, intended for the study of bioregenerative life support theories. The results of a performance analysis of the plant growth module are given. The estimated energy requirements of the module components and the total energy are given. R.J.F.

WATER RECYCLING SYSTEM USING THERMOPERVAPORATION METHOD
K. NITTA, A. ASHIDA (Hitachi Ltd., Tokyo, Japan), K. MITANI (Hitachi Ltd., Tokyo, Japan), K. EBARA (Hitachi Ltd., Tokyo, Japan), and A. YAMADA *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 201-225 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

A water recycling system concept for the crew of the space station is presented. A thermopervaporation method is a new key technology used for the distillation process, utilizing a hydrophobic membrane. An experimental study of thermopervaporation revealed that the permeation depends on the gap between the membrane and the cooling surface in the condensation room: the steam diffusion occurs with gaps less than 5 mm while natural convection becomes dominant with gaps more than 5 mm. A brief discussion of the system operation is also described. Author

SUPERCRITICAL WASTE OXIDATION OF AQUEOUS WASTES
M. MODELL *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 227-251 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 07B

For aqueous wastes containing 1 to 20 wt% organics, supercritical water oxidation is less costly than controlled incineration or activated carbon treatment and far more efficient than wet oxidation. Above the critical temperature (374 C) and pressure (218 atm) of water, organic materials and gases are completely miscible with water. In supercritical water oxidation, organics, air and water are brought together in a mixture at 250 atm and temperatures above 400 C. Organic oxidation is initiated spontaneously at these conditions. The heat of combustion is released within the fluid and results in a rise in temperature 600 to 650 C. Under these conditions, organics are destroyed rapidly with efficiencies in excess of 99.999%. Heteroatoms are oxidized to acids, which can be precipitated out as salts by adding a base to the feed. Examples are given for process configurations to treat aqueous wastes with 10 and 2 wt% organics. Author

AIRBORNE TRACE CONTAMINANTS OF POSSIBLE INTEREST IN CELSS
J. S. GARAVELLI *In its* Controlled Ecological Life Support Systems p 253-262 Jan. 1986
Avail: NTIS HC A99/MF A01 CSCL 06K

One design goal of Closed Ecological Life Support Systems (CELSS) for long duration space missions is to maintain an atmosphere which is healthy for all the desirable biological species and not deleterious to any of the mechanical components in that atmosphere. CELESS design must take into account the interactions of at least six major components; (1) humans and animals, (2) higher plants, (3) microalgae, (4) bacteria and fungi, (5) the waste processing system, and (6) other mechanical systems. Each of these major components can be both a source and a target of airborne trace contaminants in a CELSS. A range of possible airborne trace contaminants is discussed within a chemical classification scheme. These contaminants are analyzed with respect to their probable sources among the six major components and their potential effects on those components. Data on airborne chemical contaminants detected in shuttle missions is presented along with this analysis. The observed concentrations of several classes of compounds, including hydrocarbons, halocarbons, halosilanes, amines and nitrogen oxides, are considered with respect to the problems which they present to CELSS. OBSERVATIONS ON GAS EXCHANGE AND ELEMENT RECYCLE WITHIN A GAS-CLOSED ALGAL-MOUSE SYSTEM
D. T. SMERNOFF, R. A. WHARTON, JR., and M. M. AVERNER *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 263-280 Jan. 1986
Avail: NTIS HC A99/MF A01 CSCL 06K

Life support systems based on bioregeneration rely on the control and manipulation of organisms. Algae are potentially useful for a variety of Closed Ecological Life Support System (CELSS) functions including the revitalization of atmospheres, production of food and for nitrogen fixation. The results of experiments conducted with a gas-closed algal-mouse system designed to investigate gas exchange phenomena under varying algal environmental conditions, and the ability of algae to utilize oxidized mouse solid waste are reported. Inherent instabilities exist between the uptake and release of carbon dioxide (CO2) and oxygen (O2) by the mouse and algae in a gas-closed system. Variations in light intensity and cell density alter the photosynthetic rate of the algae and enable short-term steady-state concentrations of atmospheric CO2 and O2. Different nitrogen sources (urea and

nitrate) result in different algal assimilatory quotients (AQ). Combinations of photosynthetic rate and AQ ratio manipulations were examined for their potential in stabilizing atmospheric gas concentrations in the gas-closed algal-mouse system. R.J.F.

DESIGN CONCEPTS FOR BIOREACTORS IN SPACE
P. K. SESHAN, G. R. PETERSON, B. BEARD (Washington Univ., St. Louis, Mo.), and E. H. DUNLOP (Washington Univ., St. Louis, Mo.) *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 287-313 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Microbial food sources are becoming viable and more efficient alternatives to conventional food sources especially in the context of Closed Ecological Life Support Systems (CELSS) in space habitats. Since bioreactor designs for terrestrial operation will not readily apply to conditions of microgravity, there is an urgent need to learn about the differences. These differences cannot be easily estimated due to the complex nature of the mass transport and mixing mechanisms in fermenters. Therefore, a systematic and expeditious experimental program must be undertaken to obtain the engineering data necessary to lay down the foundations of designing bioreactors for microgravity. Two bioreactor design concepts presented represent two dissimilar approaches to grappling with the absence of gravity in space habitats and deserve to be tested for adoption as important components of the life support function aboard spacecrafts, space stations and other extra-terrestrial habitats. AN ANALYSIS OF THE PRODUCTIVITY OF A CELSS CONTINUOUS ALGAL CULTURE SYSTEM
R. RADMER, P. BEHRENS, E. FERNANDEZ, and K. ARNETT *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 315-328 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

One of the most attractive aspects of using algal cultures as plant components for a Closed Ecological Life Support Systems (CELSS) is the efficiency with which they can be grown. Although algae are not necessarily intrinsically more efficient than higher plants, the ease which they can be handled and manipulated (more like chemical reagents than plants), and the culturing techniques available, result in much higher growth rates than are usually attainable with higher plants. Furthermore, preliminary experiments have demonstrated that algal growth and physiology is not detectable altered in a microgravity environment, (1) whereas the response of higher plants to zero gravity is unknown. In order to rationally design and operate culture systems, it is necessary to understand how the macroparameters of a culture system, e.g., productivity, are related to the physiological aspects of the algal culture. A first principles analysis of culture system is discussed, and a mathematical model that describes the relationship of culture productivity to the cell concentration of light-limited culture is derived. The predicted productivity vs cell concentration curve agrees well with the experimental data obtained to test this model, indicating that this model permits an accurate prediction of culture productivity given the growth parameters of the system. R.J.F.

THE DEVELOPMENT OF AN UNCONVENTIONAL FOOD REGENERATION PROCESS: QUANTIFYING THE NUTRITIONAL COMPONENTS OF A MODEL METHYLOTROPHIC YEAST
G. R. PETERSEN and B. O. STOKES (Biomass International, Ogden, Utah) *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 329-338 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

A hybrid chemical/biological approach to unconventional food regeneration is discussed. Carbon dioxide and water, the major wastes of human metabolism would be converted to methanol by one of several physiochemical processes available (thermal, photocatalytic, etc.). Methanol is then used to supply carbon and energy for the culture of microorganisms which in turn produce biological useful basic food stuffs for human nutrition. Our work has focused on increasing the carbohydrate levels of a candidate methylotrophic yeast to more nearly coincide with human nutritional requirements. Yeasts were chosen due to their high carbohydrate levels compared to bacteria and their present familiarity in the human diet. The initial candidate yeast studied was a thermotolerant strain of Hansenula polymor pha, DL-1. The quantitative results that permit an evaluation of the overall efficiency in hybrid chemical/biological food production schemes are discussed. A preliminary evaluation of the overall efficiency of such schemes is also discussed. R.J.G.

APPLICATION OF PHOTOSYNTHETIC N2-FIXING CYANOBACTERIA TO THE CELSS PROGRAM
L. PACKER, I. FRY, and S. BELKIN *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 339-352 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Commercially available air lift fermentors were used to simultaneously monitor biomass production, N2-fixation, photosynthesis, respiration, and sensitivity to oxidative damage during growth under various nutritional and light regimes, to establish a data base for the integration of these organisms into a Closed Ecological Life Support System (CELSS) program. Certain cyanobacterial species have the unique ability to reduce atmospheric N2 to organic nitrogen. These organisms combine the ease of cultivation characteristics of prokaryotes with the fully developed photosynthetic apparatus of higher plants. This, along with their ability to adapt to changes in their environment by modulation of certain biochemical pathways, make them attractive candidates for incorporation into the CELSS program. CAN PLANTS GROW IN QUASI-VACUUM?
M. ANDRE and C. RICHAUD *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 395-404 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

It was found that the growth of plants is possible under absolute pressure 14 times lower than the atmospheric pressure. In first approximation, plants ignore the absence of nitrogen and only react to the partial pressure of O2. Hence the growth of plantlets was delayed under low pressures of O2 in both cases with and without nitrogen. The CO2 availability being limited by the carbon content of the seed, the final results after 20 days were very similar. R.J.F.

WHEAT RESPONSE TO CO2 ENRICHMENT: CO2 EXCHANGES TRANSPIRATION AND MINERAL UPTAKES
M. ANDRE, H. DUCLOUX, and C. RICHAUD *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 405-428 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

When simulating canopies planted in varied densities, researchers were able to demonstrate that increase of dry matter production by enhancing CO2 quickly becomes independant of increase of leaf area, especially above leaf area index of 2; dry matter gain results mainly from photosynthesis stimulation per unit of surface (primary CO2 effect). When crop density is low (the plants remaining alone a longer time), the effects of increasing leaf surface (tillering, leaf elongation here, branching for other plants etc.) was noticeable and dry matter simulation factor reached 1.65. This area effect decreased when canopy was closed in, as the effect of different surfaces no longer worked. The stimulation of photosynthesis reached to the primary CO2 effect. The accumulation in dry matter which was fast during that phase made the original weight advantage more and more neglectible. Comparison with short term measurements showed that first order long term effect of CO2 in wheat is predictible with short term experiment, from the effect of CO2 on photosynthesis measured on reference sample. R.J.F.

The economic feasibility of using food-producing crop plants in a closed ecological Life-Support System (CELSS) will ultimately depend on the energy and area (or volume) required to provide the nutritional requirements for each person. Energy and area requirements are, to some extent, inversely related; that is, an increased energy input results in a decreased area requirement and vice versa. A major goal of the research effort was to determine the controlled-environment good-production efficiency of wheat per unit area, per unit time, and per unit energy input. R.J.F.

CLOSED CULTURE PLANT STUDIES: IMPLICATIONS FOR CELSS
T. HOSHIZAKI *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 523-540 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Arabidopsis plants were grown in closed cultures similar to those used in space experiments. A shift in metabolism from photosynthesis to respiration is indicated by the accumulation of CO2 in the culture atmosphere. Reproductive growth is suppressed. Plant growth and development is apparently related to the atmospheric volume available to each plant. The implications of these findings to closed ecological systems are given: (1) there is a need for an open culture having ample gas exchange, (2) CO2 levels must be maintained within prescribed limits, (3) the minimum atmospheric volume required for each plant is dependent on the precision of the gas monitors and of the subsystems used to maintain appropriate levels of various atmospheric components, and (4) volatiles such as ethylene and terpenes emanating from plants be monitored and reduced to benign concentrations. R.J.F.

A METHOD FOR SCREENING OF PLANT SPECIES FOR SPACE USE
J. D. GOESCHL (Phytokinetics, Inc., College Station, Tex.), R. L. SAUER, and H. W. SCHELD (PhytoResource Research, Inc., College Station, Tex.) *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 541-554 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

A cost-effective methodology which monitors numerous dynamic aspects of carbon assimilation and allocation kinetics in live, intact plants is discussed. Analogous methods can apply to nitrogen

uptake and allocation. This methodology capitalizes on the special properties of the short-lived, positron-gamma emitting isotope C-11 especially when applied as CO2-11 in a special extended square wave (ESW) pattern. The 20.4 minute half-life allows for repeated or continuous experiments on the same plant over periods of minutes, hours, days, or weeks. The steady-state isotope equilibrium approached during the ESW experiments, and the parameters which can be analyzed by this technique are also direct results of that short half-life. Additionally, the paired .511 MeV gamma rays penetrate any amount of tissue and their 180 deg opposite orientation provides good collimation and allows coincidence counting which nearly eliminates background. POTATO LEAF EXPLANTS AS A SPACEFLIGHT PLANT TEST SYSTEM
R. M. WHEELER *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 555-564 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The use of explant tissues or organs may circumvent limitations facing whole-plant experimentation during spaceflight. In the case of potato, a crop currently being studied for application to bioregenerative life support systems, excised leaves and their subtended axillary buds can be used to test a variety of stem growth and development phases ranging from tubers through stolons (horizontal stems) to upright leafy shoots. The leaves can be fit well into small-volume test packages and sustained under relatively low irradiance levels using light-weight growing media. Tubers formed on potato leaf cuttings can yield up from 0.5 to 1.0 g fresh mass 10 days after excision and up to 2.0 g or more, 14 days from excision. Author

THE EFFECT OF ULTRADIAN AND ORBITAL CYCLES ON PLANT GROWTH
W. BERRY (California Univ., Los Angeles), T. HOSHIZAKI, and A. ULRICH (California Univ., Berkeley) *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 565-575 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

In a series of experiments using sugar beets, researchers investigated the effects of varying cycles lengths on growth (0.37 hr to 48 hr). Each cycle was equally divided into a light and dark period so that each treatment regardless of cycle length received the same amount of light over the 17 weeks of the experiment. Two growth parameters were used to evaluate the effects of cycle length, total fresh weight and sucrose content of the storage root. Both parameters showed very similar responses in that under long cycles (12 hr or greater) growth was normal, whereas plants growing under shorter cycle periods were progressively inhibited. Minimum growth occurred at a cycle period of 0.75 hr. The yield at the 0.75 hr cycle, where was at a minimum, for total fresh weight was only 51 percent compared to the 24 hr cycle. The yield of sucrose was even more reduced at 41 percent of the 24 hr cycle. R.J.F.

NITROGEN UPTAKE AND UTILIZATION BY INTACT PLANTS
C. D. RAPER, JR. and L. C. TOLLEY-HENRY *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 577-594 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

The results of experiments support the proposed conceptual model that relates nitrogen uptake activity by plants as a balanced interdependence between the carbon-supplying function of the shoot and the nitrogen-supplying function of the roots. The data are being used to modify a dynamic simulation of plant growth, which presently describes carbon flows through the plant, to describe nitrogen uptake and assimilation within the plant system. Although several models have been proposed to predict nitrogen uptake and partitioning, they emphasize root characteristics affecting nutrient uptake and relay on empirical methods to describe the relationship between nitrogen and carbon flows within the plant. Researchers, on the other hand, propose to continue to attempt a mechanistic solution in which the effects of environment on nitrogen (as well as carbon) assimilation are incorporated through their direct effects on photosynthesis, respiration, and aging processes. THE ROLE OF PLANT DISEASE IN THE DEVELOPMENT OF CONTROLLED ECOLOGICAL LIFE SUPPORT SYSTEMS
B. NELSON *In* NASA. Ames Research Center Controlled Ecological Life Support Systems p 595-610 Jan. 1986 refs
Avail: NTIS HC A99/MF A01 CSCL 06K

Plant diseases could be important factors affecting growth of higher plants in Closed Ecological Life Support Systems (CELSS). Disease control, therefore, will be needed to maintain healthy plants. The most important controls should be aimed at preventing the introduction, reproduction and spread of pathogens and preventing plant infection. An integrared ease control program will maximize that approach. In the design and operation of CELSS, plant disease should be considered an important aspect of plant growth. The effects of plant diseases are reviewed and several disease control measures are discussed. R.J.F.

REFURBISHING SPRAY ON ALUMINUM ENAMEL ON PROXIMITY CLOTHING Final Technical Report, Oct. 1982 - Sep. 1983
H. WINER, J. WALKER, P. CAMPBELL, and J. CALFEE Jul. 1985 25 p
(Contract MIPR-N-82-29; DA PROJ. 250-5)
(AD-A159707; AFESC/ESL-TR-84-17) Avail: NTIS HC A02/MF A01 CSCL 06Q

The Navy Clothing and Textile Research Facility studied the effectiveness of refurbishing the aluminum coating on worn aluminized proximity firefighters' clothing. It was thought that, if a spray-on aluminum enamel could restore the surface aluminum coating to an acceptable level of infrared radiant heat reflectance, then the clothing could be worn for an extended period of time, reducing replacement costs. Vacuum-deposited aluminum fabric specimens were cut from worn firefighters' clothing and tested for their thermal transmission at three levels of heat flux. Before heat-testing, each specimen was identified as to its percentage of infrared reflectance at 1100 nanometers and, subjectively, by visually observing the worn aluminized surface. This report describes the laboratory investigation of two spray-on aluminum enamel coatings over worn aluminized fabric to obtain data that would allow a judgment as to their effectiveness, as well as the effectiveness of all spray-on aluminum enamel, to extend the use-life of proximity firefighters' clothing. DYNAMICS OF HEAD PROTECTION (IMPACT PROTECTIVE COMPARISON OF THE SPH-4 FLIGHT HELMET TO A COMMERCIAL MOTORCYCLE HELMET)
R. F. ROLSTEN and J. L. HALEY, JR. Jul. 1985 37 p
(AD-A161164; USAARL-85-5) Avail: NTIS HC A03/MF A01
CSCL 06Q

The impact protection provided by a commercial motorcycle helmet is evaluated in this report. The motorcycle helmet utilizes an expanded plastic foam liner of 12 mm thickness, which is less than that used in most motorcycle helmets made in this country today. The thickness of the foam is identical to that used in the US Army Aviator's standard Sound Protective Helmet No. 4 (SPH-4). The impact protection provided by the commercial helmet is compared to the protection provided by the SPH-4 aviator helmet. GRA

HELICOPTER-REFERENCED SINGLE CONTROL, CENTER-POSITION FORCE EXERTION CAPABILITIES OF MALES AND FEMALES Final Report
A. W. SCHOPPER and G. R. MASTROIANNI Aug. 1985 60 p
(Contract DA PROJ. 3E1-62777-A-879)
(AD-A161234; USAARL-85-4) Avail: NTIS HC A04/MF A01
CSCL 06P

In response to the need for reevaluation of anthropometric criteria contained in the US Army medical standards for flying duty, an assessment was made of helicopter-control-referenced force exertion capabilities of a sample of Army males and females. Males (N=74) ranged from 159 cm through 196 cm in stature; females (N=66) ranged from 152 cm through 183 cm. The force-exertion data were compared to values cited in MIL-H-8501A as upper force limits for the design of helicopter controls. The focuses of the analyses were upon the force exertion capabilities of individuals 167 cm and below in stature since, by virtue of their relatively small size, they represent the portion of the population which are most apt to evidence inabilities to exert forces which equal or exceed control force design limits. The comparison revealed that, overall, the presently existing limits (published in 1961) for other-than-the normal operational flight envelope exceeded the force exertion capabilities of 10% of the 39 small males evaluated and 27% of the 56 females evaluated. Most failures to achieve existing or proposed control force design limits occurred because of inabilities to attain criterion-level exertion data from the small individuals of this study, various combinations of specific control force design limits were evaluated to develop estimations of overall set-wise failure rates likely to be encountered during possible future strength testing/screening. SIGNS OF LIFE
G. CAIRNS-SMITH (Glasgow, University, Scotland) New Scientist (ISSN 0028-6664), vol. 109, Jan. 2, 1986, p. 34-36.

The question of how to recognize signs of life by analysis of molecules or structures detected in remote parts of the Universe, is discussed. It is believed that to be a life indicator, a set of molecules or objects must not only belong to a certain broad class, such as amino acids or sand particles, but also possess a set of common but complex and unique structures, not readily explicable in terms of normal physical and chemical processes. The principle of these criteria is illustrated by examples of theme molecules, in which the C, H, O, N, and Fe atoms have their unique places in the molecule, and seashells, in which the 'uniqueness' is obvious because of their uncommon but repeating forms. Both are found in multitudes and thus can be recognized as parts of reproducing entities, and both possess qualities of complexity and uniqueness, suggesting that there is or was a selective advantage for a particular structure. I.S.

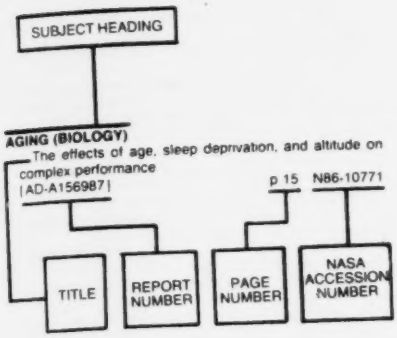
ISOLEUCINE STEREOISOMERS ON THE EARTH
J. L. BADA, M. ZHAO (California, University, La Jolla), S. STEINBERG, and E. RUTH (California, University, Los Angeles) Nature (ISSN 0028-0836), vol. 319, Jan. 23, 1986, p. 314-316. Research supported by the Petroleum Research Fund. refs
(Contract DE-AT03-76EV-70134)

To assess whether the amino acids D-isoleucine and L-allo-isoleucine could be produced on earth by beta-epimerization of L-isoleucine (L-Ile) and D-allo-isoleucine (D-alle), the beta-epimerization rate was measured at 250 C in aqueous solution, and the isoleucine stereoisometric composition was determined in fossil mollusks of various geological ages. The aqueous solution measurements suggest that the ratio of the alpha and beta-epimerization rates of isoleucine is 1000-10,000 in the neutral pH region at 250 C. If this ratio is applicable to geochemical systems, then the isoleucine beta-epimerization rate should have a half-life of about 100 million to 100 billion yr on the earth's surface. This implies that little if any beta-epimerization of L-Ile and D-alle would occur even over the entire age of the earth. An apparently enhanced rate of isoleucine beta-epimerization is found in carbonate fossils; several factors which may produce this enhancement are suggested. C.D.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

B

BACKGROUND NOISE
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] p 134 N86-18981

BACTERIA
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfatancus and its evolutionary implications p 104 A86-23998
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999
A change in the genetic code in Mycoplasma capricolum p 105 A86-24000
Rapid identification of micro-organisms
[AD-A159945] p 107 N86-18952
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929

BACTERIOLOGY
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858

BAROTRAUMA
Lung rupture as a complication in free escape --- from submarines p 122 N86-19862
Explaining the unexplained dysbaric sport diving accidents p 123 N86-19864

BEHAVIOR
An investigation into effects of environmental changes on locus of control
[AD-A160861] p 135 N86-18987
An investigation into peer and supervisor differences in the observation of performance-related behaviors
[AD-A160819] p 135 N86-19898
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900

BENZENE
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
BENZENE POISONING
The absorption of benzene through human skin
[AD-A161157] p 127 N86-19894
BIBLIOGRAPHIES
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] p 107 N86-18950
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] p 114 N86-18960
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 281)
[NASA-SP-7011(281)] p 120 N86-19850
BINOCULAR VISION
A purely central movement aftereffect induced by binocular viewing of dynamic visual noise
p 133 A86-26297

BIOASSAY
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] p 114 N86-18962
Ultrasensitive detection of chemical substances
[AD-A159996] p 108 N86-19825
BIOASTRONAUTICS
Human physiological adaptation to extended Space Flight and its implications for Space Station
[SAE PAPER 851311] p 110 A86-23502
Metabolic aspects of the problem of stress in space flight --- Russian book p 105 A86-24136
BIOCHEMISTRY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-001] p 109 N86-19828
Muscle fatigue. Physiological and biochemical studies p 120 N86-19851

BIOCONVERSION
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928

BIOELECTRIC POTENTIAL
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844

BIOFEEDBACK
General automatic components of motion sickness
[NASA-CR-176516] p 126 N86-19886
BIOGEOCHEMISTRY
Isoleucine stereoisomers on the earth p 154 A86-26198

BIOLOGICAL EFFECTS
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] p 114 N86-18960
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 281)
[NASA-SP-7011(281)] p 120 N86-19850
BIOLOGICAL EVOLUTION
Molecular archaeology of the mitochondrial genome p 104 A86-23996
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfataricus and its evolutionary implications p 104 A86-23998
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999
A change in the genetic code in Mycoplasma capricolum p 105 A86-24000
The tryptophanyl-tRNA syntnetases from eurocaryotes, procaryotes, and archebacteria have a common antigenic determinant p 105 A86-24323
BIOLOGICAL MODELS (MATHEMATICS)
Molecular archaeology of the mitochondrial genome p 104 A86-23996
Mathematical models of the effect of gravitation on lung functions --- Russian book p 111 A86-24135
On the use of a bubble formation model to calculate diving tables p 114 A86-25658

BIOMASS
Potential for utilization of algal biomass for components of the diet in CELSS
[SAE PAPER 851368] p 140 A86-23567
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
Design concepts for bioreactors in space p 151 N86-19926

BIOPHYSICS
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-001] p 109 N86-19828
BIOPROCESSING
Physiological insights gained through zero-G medical research p 144 A86-24121
Design concepts for bioreactors in space p 151 N86-19926

BIOREACTORS
Design concepts for bioreactors in space p 151 N86-19926
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930
BIOSYNTHESIS
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225

BIOTECHNOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-001] p 109 N86-19828
BLOOD
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-18973
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976
Clinico-epidemiological characteristics of Q fever in Carpathian foothills p 118 N86-19834
Investigation of the method to determine carboxyhaemoglobin in blood
[AD-A161061] p 127 N86-19892
BLOOD COAGULATION
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
BLOOD PLASMA
Elevations of plasma endotoxin levels and lysosomal enzyme activities in divers during a simulated chamber dive to 300 msw p 123 N86-19886
BLOOD VESSELS
Ionizing radiation and blood vessels --- Russian book p 105 A86-24144
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
Element analysis of sclerotic formations of major blood vessels by laser mass spectrometry p 118 N86-19833
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms
[AD-A161213] p 128 N86-19895
BODY TEMPERATURE
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] p 115 N86-18965
Thermovisual indicators of brain response to visual stimuli p 119 N86-19843
BODY WEIGHT
The influence of individual factors in man on bubble formation in air diving decompression p 125 N86-19881
Body weight changes before and after submarine patrols
[AD-A161144] p 127 N86-19893
BONE DEMINERALIZATION
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys p 106 A86-25659
Anabolic steroids as a countermeasure against bone demineralization during space flight p 114 A86-25662
BONES
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
BOTANY
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
[SAE PAPER 851397] p 104 A86-23574
BRADYCARDIA
Comparison of bradycardia breath-hold on divers and nondivers: Its importance for the capacity visit of divers p 122 N86-19863

BRAIN
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 118 N86-18978
Thermovisual indicators of brain response to visual stimuli p 119 N86-19843
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
Mesolimbic and nigrostriatal dopaminergic systems. Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900
BRAIN STEM
Effect of workload on the auditory evoked brainstem response p 128 A86-23705
BRIGHTNESS
Eye movements and spatial pattern vision
[AD-A160408] p 115 N86-18963
BRONCHI
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976
BUBBLES
Tissue gas bubble dynamics during hypobaric exposures
[SAE PAPER 851337] p 111 A86-23525
On the use of a bubble formation model to calculate diving tables p 114 A86-25658
Ultrasonic detection of circulating bubbles in ewes exposed to simulated dives deeper than 800 msw under isobaric conditions and with unchanged gas mixtures p 125 N86-19882
Less bubble formation in women divers p 126 N86-19883

C

CALCIFICATION
In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands
[AD-A160881] p 127 N86-19889
CANADIAN SPACE PROGRAM
Canadian medical experiments on Shuttle Flight 41-G p 110 A86-22996

CANCER
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975
CARBOHYDRATE METABOLISM
Increased gluconeogenesis in rats exposed to hyper-G stress p 103 A86-23311
Thymic involution in the suspended rat - Adrenal hypertrophy and glucocorticoid receptor content p 106 A86-25660

CARBON
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane
[SAE PAPER 851342] p 138 A86-23529
CARBON DIOXIDE
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225
Development status of regenerable solid amine CO2 control systems
[SAE PAPER 85-1340] p 138 A86-23527
Comparison of CO2 reduction process - Bosch and Sabatier
[SAE PAPER 851343] p 139 A86-23530
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] p 147 N86-18989
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930
Wheat response to CO2 enrichment, CO2 exchanges transpiration and mineral uptakes p 152 N86-19932
CARBON DIOXIDE CONCENTRATION
Electrochemical CO2 concentration for the Space Station Program
[SAE PAPER 851341] p 138 A86-23528
CARBON DIOXIDE REMOVAL
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability
[SAE PAPER 851374] p 140 A86-23557

CARDIOLOGY
Mitral valve prolapse in a young person - An estimation of the risk of arrhythmia - The impact on the flight fitness of a pilot p 113 A86-24510
CASE HISTORIES
Recurrent serious otitis in a reconnaissance pilot - The consequences for his career p 112 A86-24506
CATALYSTS
Wet oxidation of a spacecraft model waste
[SAE PAPER 851372] p 140 A86-23555
CATALYTIC ACTIVITY
Micellar enzymology p 109 N86-19831
CATARACTS
Fluorescent-polarization properties of chromophores of water-soluble proteins of normal and cataractal human lens p 118 N86-19832
CATECHOLAMINE
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] p 108 N86-18958
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846
CATHODE RAY TUBES
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009
CELLS (BIOLOGY)
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] p 107 N86-18951
Rapid identification of micro-organisms
[AD-A159945] p 107 N86-18952
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N86-18956
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
CEMENTS
In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands
[AD-A160881] p 127 N86-19889
CEREBELLUM
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
CERTIFICATION
The training and certification of the general aviation pilot
[SAE PAPER 841468] p 132 A86-26013
CHANGE DETECTION
The detection and identification of pictorial changes between successive presentations p 129 A86-23721
CHEMICAL ANALYSIS
Water quality monitor for recovered spacecraft water
[SAE PAPER 85-1347] p 139 A86-23533
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-18973
Element analysis of sclerotic formations of major blood vessels by laser mass spectrometry p 118 N86-19833
Investigation of the method to determine carboxyhaemoglobin in blood
[AD-A161061] p 127 N86-19892
CHEMICAL DEFENSE
Effect of wearing chemical protective clothing in the heat on signal detection over the visual field p 145 A86-25657
CHEMICAL PROPERTIES
A multivariate study of the relationship between the genetic code and the physical-chemical properties of amino acids p 104 A86-23997
CHEMICAL REACTORS
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane
[SAE PAPER 851342] p 138 A86-23529
CHEMOTHERAPY
Exhibits concerning sparing medicine at Zdravookhraneniye-85 at Moscow p 119 N86-19840
CHOLERA
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] p 107 N86-18953
CHRONIC CONDITIONS
Recurrent serious otitis in a reconnaissance pilot - The consequences for his career p 112 A86-24506
CIRCADIAN RHYTHMS
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] p 118 N86-18972
Problem of biological clocks: New data on circadian changes in status of human organism p 120 N86-19848
CLINICAL MEDICINE
Orthostatic tolerance of normal Indians and those with suspected abnormal cardiovascular reflex status p 114 A86-25661
Exhibits concerning sparing medicine at Zdravookhraneniye-85 at Moscow p 119 N86-19840
Magnets and surgical procedures p 119 N86-19841
Hyberbaric oxygen in the treatment of Bell's palsy p 124 N86-19870
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899
CLOSED ECOLOGICAL SYSTEMS
Membrane-based water- and energy-recovery systems for the manned space station
[SAE PAPER 851345] p 139 A86-23531
Potential for utilization of algal biomass for components of the diet in CELSS
[SAE PAPER 851388] p 140 A86-23567
BLSS, a European approach to CELSS --- Biological Life Support Systems
[SAE PAPER 851391] p 141 A86-23569
CELSS experiment model and design concept of gas recycle system
[SAE PAPER 851393] p 141 A86-23570
Sodium and potassium recycle in closed ecosystem-space agriculture p 144 A86-25199
Controlled Ecological Life Support Systems: CELSS 1985 Workshop
[NASA-TM-88215] p 148 N86-19906
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
BLSS, a European approach to CELSS p 148 N86-19908
CELSS experiment model and design concept of gas recycle system p 148 N86-19909
Utilization of membranes for H2O recycle system p 148 N86-19910
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
Simulation model for plant growth in controlled environment systems p 149 N86-19914
Plan for CELSS test bed project p 149 N86-19915
Plant growth chamber M design p 149 N86-19916
Operational development of small plant growth systems p 149 N86-19917
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918
An engineering analysis of a closed cycle plant growth module p 150 N86-19919
Airborne trace contaminants of possible interest in CELSS p 150 N86-19923
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 150 N86-19924
CELSS science needs p 151 N86-19925
Design concepts for bioreactors in space p 151 N86-19926
An analysis of the productivity of a CELSS continuous algal culture system p 151 N86-19927
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930
Can plants grow in quasi-vacuum? p 152 N86-19931
Studies on maximum yield of wheat for the controlled environments of space p 152 N86-19934
Utilization of potatoes in CELSS: Productivity and growing systems p 152 N86-19935
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936
Closed culture plant studies: Implications for CELSS p 152 N86-19937
Potato leaf explants as a spaceflight plant test system p 153 N86-19939
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
The role of plant disease in the development of controlled ecological life support systems p 153 N86-19942
Development of space technology for ecological habitats p 153 N86-19943
COCHLEA
The effect of impulse intensity and the number of impulses on hearing and cochlear pathology in the chinchilla
[AD-A161230] p 109 N86-19827
COCKPITS
The effect of asymmetric transfer on dual-task assessment of voice technology p 141 A86-23702
Eye-controlled switching for crew station design p 142 A86-23711
Cockpit automation technology p 142 A86-23724
Noise levels in cockpits of aircraft during normal cruise and considerations of auditory risk p 145 A86-25651
Flight deck automation decisions
[SAE PAPER 841471] p 145 A86-26002
Flight deck design methodology using computerized anthropometric models
[SAE PAPER 841472] p 146 A86-26003
Automation in the cockpit - Who's in charge?
[SAE PAPER 841534] p 146 A86-26005
Winging it in the 1980's - Why guidelines are needed for cockpit automation
[SAE PAPER 841634] p 147 A86-26022
Situation versus command --- flight information for pilots
[SAE PAPER 841638] p 147 A86-26023
The decision to fly --- by aircraft pilots
[SAE PAPER 841613] p 132 A86-26024
Comparison of voice types for helicopter voice warning systems
[SAE PAPER 841611] p 147 A86-26030
COGNITION
Overall sensitivity and the identification of separable-dimension stimuli - A choice model analysis p 133 A86-26296
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982
An investigation into peer and supervisor differences in the observation of performance-related behaviors
[AD-A160819] p 135 N86-19898
COGNITIVE PSYCHOLOGY
An empirical demonstration of multiple resources p 141 A86-23703
Cognitive attributes to guide display design in automated command-and-control systems p 142 A86-23723
The optimum presentation of cognitive training during a flight training program p 130 A86-23731
Personality differences as a moderator of mental workload behavior - Mental workload performance and strain reactions as a function of cognitive complexity p 130 A86-23732
Event-related potential indices of workload in a single task paradigm p 130 A86-23733
COLD ACCLIMATIZATION
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
COLLISION AVOIDANCE
Use of a signal detection paradigm to assess subjective intersection points in a target location task p 129 A86-23720
COLOR CODING
Color coding of synthetic aperture radar imagery p 142 A86-23713
A new test of the color vision of professionals p 112 A86-24505
COLOR VISION
A new test of the color vision of professionals p 112 A86-24505
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009
Luminance and chromaticity signal processing in the human visual system p 121 N86-19852
Passing scores for the FAA ATCS color vision test
[AD-A160889] p 127 N86-19890
COMMAND AND CONTROL
Cognitive attributes to guide display design in automated command-and-control systems p 142 A86-23723
Situation versus command --- flight information for pilots
[SAE PAPER 841638] p 147 A86-26023
COMPENSATORY TRACKING
An empirical demonstration of multiple resources p 141 A86-23703
On the pilot's behavior of detecting a system parameter change p 145 A86-25229
COMPRESSED AIR
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions p 122 N86-19861
COMPUTER AIDED DESIGN
A computer-based system for workstation design and analysis --- for flight crews p 142 A86-23707
Cockpit automation technology p 142 A86-23724
Flight deck design methodology using computerized anthropometric models
[SAE PAPER 841472] p 146 A86-26003
COMPUTER AIDED TOMOGRAPHY
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 118 N86-19978

COMPUTER INFORMATION SECURITY
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms
[AD-A161213] p 128 N86-19895
COMPUTER PROGRAMS
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms
[AD-A161213] p 128 N86-19895
COMPUTER STORAGE DEVICES
Beyond associations: Strategic components in memory retrieval
[AD-A160783] p 134 N86-18985
COMPUTER SYSTEMS DESIGN
Utility of an emulation and simulation computer model for air revitalization system hardware design, development, and test
[SAE PAPER 851377] p 140 A86-23560
COMPUTERIZED SIMULATION
Utility of an emulation and simulation computer model for air revitalization system hardware design, development, and test
[SAE PAPER 851377] p 140 A86-23560
Simulation model for plant growth in controlled environment systems
[SAE PAPER 85-1390] p 104 A86-23568
An engineering analysis of a closed cycle plant growth module p 150 N86-19919
COMPUTERS
Message-based screen interfaces - The effects of presentation rates and task complexity on operator performance p 143 A86-23734
CONDITIONING (LEARNING)
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
CONFERENCES
Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volumes 1 & 2 p 141 A86-23701
Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings
[SAE P-151] p 145 A86-26001
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
[FOA-C-50021-H1] p 121 N86-19854
Controlled Ecological Life Support Systems: CELSS 1985 Workshop
[NASA-TM-86215] p 149 N86-19906
CONTAMINANTS
Airborne trace contaminants of possible interest in CELSS p 150 N86-19923
CONTRAST
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-26293
CONTROL SYSTEMS DESIGN
Development status of regenerable solid amine CO2 control systems
[SAE PAPER 85-1340] p 138 A86-23527
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability
[SAE PAPER 851374] p 140 A86-23557
Eye-controlled switching for crew station design p 142 A86-23711
CONTROL VALVES
Servo operated anti-G suit pressurization system
[AD-D011932] p 147 N86-18988
CONTROLLED ATMOSPHERES
Development status of regenerable solid amine CO2 control systems
[SAE PAPER 85-1340] p 138 A86-23527
Simulation model for plant growth in controlled environment systems
[SAE PAPER 85-1390] p 104 A86-23568
The C23A system, an example of quantitative control of plant growth associated with a data base
[SAE PAPER 851395] p 104 A86-23572
Wet-oxidation waste management system for CELSS
[SAE PAPER 851398] p 141 A86-23575
Controlled Ecological Life Support Systems: CELSS 1985 Workshop
[NASA-TM-86215] p 148 N86-19906
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
Plant growth chamber M design p 149 N86-19916
An engineering analysis of a closed cycle plant growth module p 150 N86-19919
Airborne trace contaminants of possible interest in CELSS p 150 N86-19923
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 150 N86-19924
Can plants grow in quasi-vacuum? p 152 N86-19931
Wheat response to CO2 enrichment: CO2 exchanges transpiration and mineral uptakes p 152 N86-19932
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936
Closed culture plant studies: Implications for CELSS p 152 N86-19937
Development of space technology for ecological habitats p 153 N86-19943
CONTROLLERS
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930
COORDINATION
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324
CORTICOSTEROIDS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
COSMOCHEMISTRY
Signs of life --- in molecules of Universe p 154 A86-25774
COUNTERMEASURES
Anabolic steroids as a countermeasure against bone demineralization during space flight p 114 A86-25662
An attempt to counteract nitrogen narcosis by naloxone administration p 123 N86-19865
COVALENT BONDS
Covalent crosslinks between filaments in DNA induced by laser p 109 N86-19839
CREW EXPERIMENT STATIONS
Cockpit automation technology p 142 A86-23724
CREW WORKSTATIONS
A computer-based system for workstation design and analysis --- for flight crews p 142 A86-23707
Eye-controlled switching for crew station design p 142 A86-23711
CRITERIA
Productivity and difficulty as new criteria for validating aviator selection tests p 128 A86-23717
CROP GROWTH
Simulation model for plant growth in controlled environment systems
[SAE PAPER 85-1390] p 104 A86-23568
The C23A system, an example of quantitative control of plant growth associated with a data base
[SAE PAPER 851395] p 104 A86-23572
Characteristics of effects of microbiological means of plant protection on organism p 109 N86-19829
CROSSLINKING
Covalent crosslinks between filaments in UV4A induced by laser p 109 N86-19839
CRUISING FLIGHT
Noise levels in cockpits of aircraft during normal cruise and considerations of auditory risk p 145 A86-25651
CUES
Does location cueing increase the efficiency of the early stages of perceptual processing? p 129 A86-23722
CULTURE TECHNIQUES
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968
Design concepts for bioreactors in space p 151 N86-19926
An analysis of the productivity of a CELSS continuous algal culture system p 151 N86-19927
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930
CUSHIONS
Effect of seat cushions on human respone to +Gz impact p 145 A86-25652
CUTTERS
Cutting head for ultrasonic lithotripsy
[NASA-CASE-GSC-12944-1] p 126 N86-19885
CYBERNETICS
CELSS science needs p 151 N86-19925
CYCLES
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
CYCLIC COMPOUNDS
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368
CYTOLOGY
Molecular archaeology of the mitochondrial genome p 104 A86-23996

Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424
Rapid identification of micro-organisms
[AD-A159945] p 107 N86-18952

D

DARKNESS
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
DATA ACQUISITION
Epidemiological supervision of poliomyelitis p 118 N86-19835
DATA BASES
The C23A system, an example of quantitative control of plant growth associated with a data base
[SAE PAPER 851395] p 104 A86-23572
DATA PROCESSING
Multimodal versus unimodal information processing of words
[AD-A160517] p 134 N86-18984
DEATH
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
DECISION MAKING
Operator loading effects in a simulated tactical decision-making problem p 130 A86-23739
Flight deck automation decisions
[SAE PAPER 841471] p 145 A86-26002
AI applications to military pilot decision aiding - A perspective on transition
[SAE PAPER 841533] p 146 A86-26004
Automation in the cockpit - Who's in charge?
[SAE PAPER 841534] p 146 A86-26005
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899
On the analysis and design of human information processing organizations
[AD-A161015] p 136 N86-19902
DECISIONS
The decision to fly --- by aircraft pilots
[SAE PAPER 841613] p 132 A86-26024
DECOMPRESSION SICKNESS
Physiological considerations for EVA in the Space Station era
[SAE PAPER 851313] p 111 A86-23504
Minimum pressure for a zero-prebreathe pressure suit
[SAE PAPER 851315] p 137 A86-23505
On the use of a bubble formation model to calculate diving tables p 114 A86-25656
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
[FOA-C-50021-H1] p 121 N86-19854
Explaining the unexplained dysbaric sport diving accidents p 123 N86-19864
Repetitive decompression tables for no-stop excursions from saturation --- underwater habitats p 125 N86-19876
Wet chamber dives to test algorithms for electronic decompressometers p 125 N86-19878
An appraisal of dive profiles in shellfish divers with reference to the risk of decompression sickness p 125 N86-19879
Alternatives to standard air tables --- diver decompression p 125 N86-19880
The influence of individual factors in man on bubble formation in air diving decompression p 125 N86-19881
Less bubble formation in women divers p 126 N86-19883
Effect of low and high environmental temperatures on decompression sickness in the aging rat p 126 N86-19884
DENTISTRY
A study of patient's self-image during orthodontic treatment
[AD-A160751] p 126 N86-19886
In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands
[AD-A160881] p 127 N86-19889
DEOXYRIBONUCLEIC ACID
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968
Covalent crosslinks between filaments in DNA induced by laser p 109 N86-19839

DESIGN ANALYSIS
Evolution of the Shuttle Extravehicular Mobility Unit's life support system
[SAE PAPER 85-1333] p 137 A86-23522
DESYNCHRONIZATION (BIOLOGY)
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] p 116 N86-18972
DETONATION WAVES
The effect of impulse intensity and the number of impulses on hearing and cochlear pathology in the chinchilla
[AD-A161230] p 109 N86-19827
DIAGNOSIS
Exhibits concerning sparing medicine at Zdravookhraneniye-85 at Moscow p 119 N86-19840
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
DIESEL FUELS
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] p 114 N86-18962
DIGITAL NAVIGATION
Effects of digital altimetry on pilot workload
[SAE PAPER 841489] p 132 A86-26019
DIGITAL TECHNIQUES
A digital image processing facility for human factors research p 143 A86-23737
DIGITALIS
Effects of digital altimetry on pilot workload
[SAE PAPER 841489] p 132 A86-26019
DIMERS
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N86-18956
DISEASES
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Review of duodenal and gastric ulcer
[AD-A160919] p 117 N86-18977
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
The role of plant disease in the development of controlled ecological life support systems p 153 N86-19942
DISPLAY DEVICES
Cognitive attributes to guide display design in automated command-and-control systems p 142 A86-23723
The effects of aerial perspective on altitude estimation p 130 A86-23730
Message-based screen interfaces - The effects of presentation rates and task complexity on operator performance p 143 A86-23734
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009
DISTILLATION
Water recycling system using thermopervaporation method p 150 N86-19921
DISTORTION
Visual distortion - The correlation model
[SAE PAPER 841595] p 114 A86-26026
Permanent distortion of positional system of Xenopus embryo by brief early perturbation in gravity p 106 A86-26180
DIVING (UNDERWATER)
On the use of a bubble formation model to calculate diving tables p 114 A86-25658
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] p 147 N86-18989
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
[FOA-C-50021-H1] p 121 N86-19854
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
The effects of the insulation properties of different dry suit systems on the diver's heat balance and comfort during diving to 50 m p 121 N86-19856
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions p 122 N86-19861
Comparison of bradycardia breath-hold on divers and nondivers: Its importance for the capacity visit of divers p 122 N86-19863
Explaining the unexplained dysbaric sport diving accidents p 123 N86-19864
An attempt to counteract nitrogen narcosis by naloxone administration p 123 N86-19865
Elevations of plasma endotoxin levels and lysosomal enzyme activities in divers during a simulated chamber dive to 300 msw p 123 N86-19866
Effects of intermittent exposure to hyperoxia in operational diving p 123 N86-19868
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19872
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives p 124 N86-19874
Psychological and physiological stress reactions among sports diver-students p 124 N86-19875
Repetitive decompression tables for no-stop excursions from saturation --- underwater habitats p 125 N86-19876
Excursion limits in shallow water heliox saturation diving p 125 N86-19877
Wet chamber dives to test algorithms for electronic decompressiometers p 125 N86-19878
An appraisal of dive profiles in shellfish divers with reference to the risk of decompression sickness p 125 N86-19879
Alternatives to standard air tables --- diver decompression p 125 N86-19880
The influence of individual factors in man on bubble formation in air diving decompression p 125 N86-19881
Ultrasonic detection of circulating bubbles in ewes exposed to simulated dives deeper than 800 msw under isobaric conditions and with unchanged gas mixtures p 125 N86-19882
Less bubble formation in women divers p 126 N86-19883
Effect of low and high environmental temperatures on decompression sickness in the aging rat p 126 N86-19884
DOPA
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19867
DOPPLER NAVIGATION
U.S. Army helicopter voice technology applications
[SAE PAPER 841609] p 147 A86-26028
DOSAGE
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900
DRUGS
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900
DYES
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] p 114 N86-18962

E

EAR
Practical application of basic research on impulse noise hazard
[AD-A160432] p 115 N86-18964
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives p 124 N86-19874
EAR PROTECTORS
Noise levels in cockpits of aircraft during normal cruise and considerations of auditory risk p 145 A86-25651
EARTH ORBITAL ENVIRONMENTS
Space Station Environmental Control/Life Support System engineering
[SAE PAPER 851375] p 140 A86-23558
ECOLOGY
CELSS science needs p 151 N86-19925
EDUCATION
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
Conserving instructional training resources through use of the personalized system of instruction p 129 A86-23719
Local and global factors in learning
[AD-A161128] p 136 N86-19904
EFFERENT NERVOUS SYSTEMS
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] p 108 N86-18958
ELECTRIC WELDING
Oral changes in divers working with electrical equipment under water p 124 N86-19873
ELECTROCHEMISTRY
Electrochemical CO2 concentration for the Space Station Program
[SAE PAPER 851341] p 138 A86-23528
Environmental Control and Life Support Systems technology options for Space Station application
[SAE PAPER 851376] p 140 A86-23559
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918
ELECTROENCEPHALOGRAPHY
Effect of workload on the auditory evoked brainstem response p 128 A86-23705
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
ELECTROLYSIS
Static feed water electrolysis system for Space Station O2 and H2 generation
[SAE PAPER 851339] p 138 A86-23526
ELECTROMAGNETIC ABSORPTION
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442
ELECTROMAGNETIC FIELDS
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field p 103 A86-23490
EMBOLISMS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
EMBRYOS
Permanent distortion of positional system of Xenopus embryo by brief early perturbation in gravity p 106 A86-26180
EMPLOYEE RELATIONS
The influence of quality circles on attitudinal outcomes among civil engineering personnel
[AD-A161152] p 136 N86-19905
ENCEPHALITIS
Investigation of reactogenic and antigenic activity of chromatographically purified, concentrated and inactivated dry vaccine against tick borne encephalitis p 119 N86-19837
ENDOTHELIUM
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
ENDOTOXINS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Elevations of plasma endotoxin levels and lysosomal enzyme activities in divers during a simulated chamber dive to 300 msw p 123 N86-19866
ENERGY CONVERSION EFFICIENCY
Membrane-based water- and energy-recovery systems for the manned space station
[SAE PAPER 851345] p 139 A86-23531
ENVIRONMENT PROTECTION
Characteristics of effects of microbiological means of plant protection on organism p 109 N86-19829
ENVIRONMENTAL CONTROL
Electrochemical CO2 concentration for the Space Station Program
[SAE PAPER 851341] p 138 A86-23528
Space Station Environmental Control/Life Support System engineering
[SAE PAPER 851375] p 140 A86-23558
Environmental Control and Life Support Systems technology options for Space Station application
[SAE PAPER 851376] p 140 A86-23559
ENVIRONMENTS
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-18973
ENZYME ACTIVITY
Micellar enzymology p 109 N86-19831
ENZYMES
Rapid identification of micro-organisms
[AD-A159945] p 107 N86-18952

Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
The production of RhO(D) negative erythrocytes
[AD-A160775] p 116 N86-18971
Ultrasensitive detection of chemical substances
[AD-A159996] p 108 N86-19825

EPIDEMIOLOGY
USSR report: Life sciences: Biomedical and behavioral sciences
[JPRS-UBB-86-001] p 109 N86-19829
Epidemiological supervision of poliomyelitis p 119 N86-19835

ERRORS
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307

ERYTHROCYTES
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424
The production of RhO(D) negative erythrocytes
[AD-A160775] p 116 N86-18971
Light induced damage to erythrocyte membrane sensitized by tetrasulfophenyl porphin p 109 N86-19838

ESCAPE (ABANDONMENT)
Lung rupture as a complication in free escape — from submarines p 122 N86-19862

ESTERS
Ultrasensitive detection of chemical substances
[AD-A159996] p 108 N86-19825

ESTIMATES
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] p 134 N86-18986

EURECA (ESA)
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
[SAE PAPER 851397] p 104 A86-23574
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912

EUROPEAN SPACE PROGRAMS
RLSS, a European approach to CELSS — Biological Life Support Systems
[SAE PAPER 851391] p 141 A86-23568

EVALUATION
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] p 134 N86-18983

EVAPORATION
Water recycling system using thermoperevaporation method p 150 N86-19921

EVAPORATORS
Thermoelectric integration membrane evaporation subsystem water recovery - Technology update
[SAE PAPER 851348] p 139 A86-23534

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Effect of workload on the auditory evoked brainstem response p 128 A86-23705
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844

EXERCISE PHYSIOLOGY
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160560] p 115 N86-18967

EXOBIOLOGY
Space Station life sciences guidelines for nonhuman experiment accommodation
[SAE PAPER 851370] p 104 A86-23553
The life sciences on board of Spacelab D1 p 105 A86-24610
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] p 108 N86-18949
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 279)
[NASA-SP-7011(279)] p 114 N86-18960
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 281)
[NASA-SP-7011(281)] p 120 N86-19850

EXPERIMENT DESIGN
Excursion limits in shallow water helox saturation diving p 125 N86-19877

EXPERIMENTATION
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 138 N86-19830

EXTRATERRESTRIAL LIFE
Signs of life — in molecules of Universe p 154 A86-25774

EXTRATERRESTRIAL RADIATION
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160901] p 117 N86-18975

EXTRAVEHICULAR ACTIVITY
Physiological considerations for work in the Space Station era
[SAE PAPER 851313] p 111 A86-23504
Minimum pressure for a zero-prebreathe pressure suit
[SAE PAPER 851315] p 137 A86-23505
The roles of astronauts and machines for future space operations
[SAE PAPER 851332] p 137 A86-23521

EXTRAVEHICULAR MOBILITY UNITS
Evolution of the Shuttle Extravehicular Mobility Unit's life support system
[SAE PAPER 851333] p 137 A86-23522

EYE EXAMINATIONS
A new test of the color vision of professionals p 112 A86-24505

EYE MOVEMENTS
The effects of simulator and aircraft motion on eye scan behavior p 128 A86-23709
Eye-controlled switching for crew station design p 142 A86-23711
Eye movements and spatial pattern vision
[AD-A160408] p 115 N86-18963

F

F-16 AIRCRAFT
Advanced fighter technology integration (AFTI) F-16: The pilot interface
[SAE PAPER 841633] p 146 A86-25219

FACE (ANATOMY)
Hyperbaric oxygen in the treatment of Bell's palsy p 124 N86-19871

FAIL-SAFE SYSTEMS
Winging it in the 1980's - Why guidelines are needed for cockpit automation
[SAE PAPER 841634] p 147 A86-25222

FEAR OF FLYING
Flying and danger: city and rural — pilot motivation and fear of flying p 131 A86-25833

FEEDBACK CONTROL
Servo operated anti-G suit pressurization system
[AD-D011632] p 147 N86-19966

FEMALES
Less bubble formation in women divers p 126 A86-24882
Helicopter-referenced single control, center position force exertion capabilities of males and females
[AD-A161234] p 154 N86-19948

FERMENTATION
Design concepts for bioreactors in space p 151 N86-19929

FEVER
Clinico-epidemiological characteristics of Q fever in Carpathian foothills p 119 N86-19834

FIBROBLASTS
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159676] p 107 N86-19361

FIGHTER AIRCRAFT
Advanced fighter technology integration (AFTI) F-16: The pilot interface
[SAE PAPER 841633] p 146 A86-25219
The beginnings of airborne weightlessness research
[AD-A160575] p 115 N86-18966

FILTRATION
Utilization of membranes for H2O recycle system p 149 N86-19910
Water recycling system using thermoperevaporation method p 150 N86-19921

FINGERS
Some dominant frequencies of pacinian human skin at 31 Bar p 122 N86-19853

FIREPROOFING
Refurbishing spray on aluminum enamel on proximity clothing
[AD-A158707] p 152 N86-19944

FISHES
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957

FLICKER
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-25202

FLIGHT CHARACTERISTICS
The decision to fly — by aircraft pilots
[SAE PAPER 841613] p 132 A86-25224

FLIGHT CLOTHING
Synthesis of head protection impact protective performance of the SPH-4 flight helmet to a commercial motorcycle helmet
[AD-A161164] p 154 N86-19942

FLIGHT CONTROL
Advanced fighter technology integration (AFTI) F-16: The pilot interface
[SAE PAPER 841633] p 146 A86-25219

FLIGHT CREWS
A computer-based system for workspace design and analysis — for flight crews p 142 A86-23712
Night vision manual for the flight surgeon
[AD-A158726] p 114 N86-19961
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160796] p 116 N86-19972
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-19973

FLIGHT FATIGUE
Physiological considerations for work in the Space Station era
[SAE PAPER 851313] p 111 A86-23504
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-19973

FLIGHT FITNESS
Ophthalmological problems linked to helicopter flight p 112 A86-24504
Recurrent serious otitis in a recompressed pilot: The consequences for his career p 112 A86-24506
A cold thyroid nodule: Statistical data and semiological aptitude p 112 A86-24507
Some psychological aspects of an accident p 131 A86-24508
Gastric and duodenal ulcers and the flight fitness of pilots p 112 A86-24509
Mitral valve prolapse in a young person: An estimation of the risk of arrhythmia: The impact on the flight fitness of a pilot p 112 A86-24510
Catheter cardiopathology in pilots: The risk, the methods of detection and prevention p 112 A86-24511

FLIGHT MANAGEMENT SYSTEMS
Situation versus command — flight information for pilots
[SAE PAPER 841636] p 147 A86-25223

FLIGHT SAFETY
The role of accident statistics in influencing simulator design p 146 A86-23714
Some problems in flight mechanics with respect to flight safety p 131 A86-23715
Clinical problems encountered by a separation flight surgeon p 112 A86-24502
Clinical problems posed by the medical surveillance of pilots exposed to high levels of acceleration p 112 A86-24503

FLIGHT SIMULATION
The effects of time perspective on attitude judgments p 130 A86-23716
Comparison of voice tasks for helicopter voice warning systems
[SAE PAPER 841631] p 147 A86-25220

FLIGHT SIMULATORS
The effects of simulator and aircraft motion on eye scan behavior p 128 A86-23709
The role of accident statistics to influence simulator design p 146 A86-23714

FLIGHT SURGEONS
Clinical problems encountered by a separation flight surgeon p 112 A86-24502
The flight surgeon and psychiatry: interest and skills p 131 A86-24512

FLIGHT TESTS
A review of pilot-vehicle measurement techniques used on the X-15 winged rocket flight vehicle
[SAE PAPER 841607] p 146 A86-25216

FLUORESCENCE
Fluorescent polarization properties of cytochrome c in water-soluble mixtures of normal and cancerous human sera p 110 N86-19811

FOLIAGE
Remote sensing of forest damage p 153 N86-19951

FOOD
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-001] p 109 N86-19828
FOOD PROCESSING
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
Plan for CELSS test bed project p 149 N86-19915
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928
FOOD PRODUCTION (IN SPACE)
Potential for utilization of algal biomass for components of the diet in CELSS
[SAE PAPER 851388] p 140 A86-23567
FREE RADICALS
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
FROSTBITE
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
FUNGI
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912

G

GAS CHROMATOGRAPHY
Investigation of the method to determine carboxyhaemoglobin in blood
[AD-A161061] p 127 N86-19892
GAS EXCHANGE
Respiratory function in inhabitants of northeastern USSR p 119 N86-19845
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 150 N86-19924
GAS MIXTURES
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
GAS RECOVERY
CELSS experiment model and design concept of gas recycle system
[SAE PAPER 851393] p 141 A86-23570
GAS TRANSPORT
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976
GASES
CELSS experiment model and design concept of gas recycle system p 148 N86-19909
Gas and water recycling system for IOC vivarium experiments p 150 N86-19920
GASTROINTESTINAL SYSTEM
Review of duodenal and gastric ulcer
[AD-A160919] p 117 N86-18977
GENERAL AVIATION AIRCRAFT
The training and certification of the general aviation pilot
[SAE PAPER 841468] p 132 A86-26013
GENETIC CODE
A multivariate study of the relationship between the genetic code and the physical-chemical properties of amino acids p 104 A86-23997
A change in the genetic code in Mycoplasma capricolum p 105 A86-24000
GENETIC ENGINEERING
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N86-18956
GENETICS
Molecular archaeology of the mitochondrial genome p 104 A86-23996
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfataricus and its evolutionary implications p 104 A86-23998
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999
Molecular approaches to selective immunization
[AD-A160141] p 107 N86-18954
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968
Review of duodenal and gastric ulcer
[AD-A160919] p 117 N86-18977
CELSS science needs p 151 N86-19925
GLASS
In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands
[AD-A160881] p 127 N86-19889
GLOVES
Enhancement of space suit glove performance
[SAE PAPER 851335] p 138 A86-23524
GLUCOSE
Increased gluconeogenesis in rats exposed to hyper-G stress p 103 A86-23311
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 118 N86-18978
GLYCOGENS
Increased gluconeogenesis in rats exposed to hyper-G stress p 103 A86-23311
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929
GRATINGS
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-26293
GRAVITATIONAL EFFECTS
Permanent distortion of positional system of Xenopus embryo by brief early perturbation in gravity p 106 A86-26180
GRAVITATIONAL PHYSIOLOGY
Increased gluconeogenesis in rats exposed to hyper-G stress p 103 A86-23311
Mathematical models of the effect of gravitation on lung functions --- Russian book p 111 A86-24135
Proteinuria in fighter pilots after high + Gz exposure p 113 A86-25653
GROUP DYNAMICS
Evaluation of a multi-method group treatment approach for the management of stress
[AD-A160813] p 135 N86-19897
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899
GROWTH
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys p 106 A86-25659
Thymic involution in the suspended rat - Adrenal hypertrophy and glucocorticoid receptor content p 106 A86-25660
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930

H

HABITABILITY
Space Station crew safety - Human factors model p 143 A86-23742
HAND (ANATOMY)
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859
HAZARDS
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
Practical application of basic research on impulse noise hazard
[AD-A160432] p 115 N86-18964
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899
HEALTH
Health maintenance and human productivity in the Space Station Era
[SAE PAPER 85-1312] p 110 A86-23503
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975
Assessing the hearth risks of carrier landings in US Navy pilots
[AD-A160928] p 127 N86-19891
HEALTH PHYSICS
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442
HEARING
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study
[AD-A160799] p 117 N86-18974
A comparison of dichotic listening task scoring methods
[AD-A159920] p 133 N86-18980
The effect of impulse intensity and the number of impulses on hearing and cochlear pathology in the chinchilla
[AD-A161230] p 109 N86-19827
HEART
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field p 103 A86-23490
HEART DISEASES
Ischemic cardiopathology in pilots - The risk, the methods of detection and prevention p 113 A86-24511
An investigation into effects of environmental changes on locus of control
[AD-A160861] p 135 N86-18987
HEART FUNCTION
Increased inotropi of the heart in normoxic hyperbaric atmosphere p 123 N86-19869
HEART RATE
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853
HEART VALVES
Mitral valve prolapse in a young person - An estimation of the risk of arrhythmia - The impact on the flight fitness of a pilot p 113 A86-24510
HEAT ACCLIMATIZATION
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] p 115 N86-18967
HEAT PUMPS
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
HEAT TOLERANCE
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] p 115 N86-18967
HEAT TRANSFER
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] p 115 N86-18965
HEAT TRANSMISSION
Refurbishing spray on aluminum enamel on proximity clothing
[AD-A159707] p 153 N86-19944
HEATING EQUIPMENT
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
HELICOPTER CONTROL
Retention of helicopter flight skills - Is there a 'critical period' for proficiency loss? p 129 A86-23718
HELICOPTER DESIGN
Advanced technology - New fixes or new problems? --- for helicopter voice warning systems p 147 A86-26031
HELICOPTERS
An analysis of visual tasks in helicopter shipboard landing
[AD-A161101] p 136 N86-19903
HELMETS
Dynamics of head protection (impact protective comparison of the SPH-4 flight helmet to a commercial motorcycle helmet)
[AD-A161164] p 154 N86-19945
HEMATOLOGY
Ionizing radiation and blood vessels --- Russian book p 105 A86-24144
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424
HEMATOPOIESIS
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] p 108 N86-18959
HEMATOPOIETIC SYSTEM
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
HEMODYNAMIC RESPONSES
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
Orthostatic tolerance of normal Indians and those with suspected abnormal cardiovascular reflex status p 114 A86-25661
HEMOGLOBIN
Investigation of the method to determine carboxyhaemoglobin in blood
[AD-A161061] p 127 N86-19892
HIGH PRESSURE
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857

Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19867

HIGH TEMPERATURE
Supercritical waste oxidation of aqueous wastes p 150 N86-19922

HISTAMINES
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846

HISTOLOGY
Rapid identification of micro-organisms [AD-A159945] p 107 N86-18952

HOMEOSTASIS
Hematopoiesis in conventional mice after wound trauma [AD-A160436] p 108 N86-18959

HOVERING
An analysis of visual tasks in helicopter shipboard landing [AD-A161101] p 136 N86-19903

HUMAN BEHAVIOR
Multimodal versus unimodal information processing of words [AD-A160517] p 134 N86-18984
A study of patient's self-image during orthodontic treatment [AD-A160751] p 126 N86-19888
On the analysis and design of human information processing organizations [AD-A161015] p 136 N86-19902

HUMAN BEINGS
A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976
Beyond associations: Strategic components in memory retrieval [AD-A160783] p 134 N86-18985

HUMAN FACTORS ENGINEERING
Your space suit and you - Significance of manloading in pressure suit design [SAE PAPER 851334] p 137 A86-23523
Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volumes 1 & 2 p 141 A86-23701
A computer-based system for workstation design and analysis — for flight crews p 142 A86-23707
Cognitive attributes to guide display design in automated command-and-control systems p 142 A86-23723
Cockpit automation technology p 142 A86-23724
A digital image processing facility for human factors research p 143 A86-23737
Space Station crew safety - Human factors model p 143 A86-23742
Development of an automated anthropometric data measurement system (AADMS) p 144 A86-23748
On the pilot's behavior of detecting a system parameter change p 145 A86-25229
Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings [SAE P-151] p 145 A86-26001
Flight deck design methodology using computerized anthropometric models [SAE PAPER 841472] p 146 A86-26003
AI applications to military pilot decision aiding - A perspective on transition [SAE PAPER 841533] p 146 A86-26004
Winging it in the 1980's - Why guidelines are needed for cockpit automation [SAE PAPER 841634] p 147 A86-26022
The decision to fly — by aircraft pilots [SAE PAPER 841613] p 132 A86-26024
Preparing for the unexpected - A psychologist's case for improved training p 132 A86-26033
Helicopter-referenced single control, center-position force exertion capabilities of males and females [AD-A161234] p 154 N86-19946

HUMAN PERFORMANCE
An empirical demonstration of multiple resources p 141 A86-23703
The detection and identification of pictorial changes between successive presentations p 129 A86-23721
Personality differences as a moderator of mental workload behavior - Mental workload performance and strain reactions as a function of cognitive complexity p 130 A86-23732
Space Station crew safety - Human factors model p 143 A86-23742
The effect of intervening task performance on subjective workload ratings p 144 A86-23746
Night vision manual for the flight surgeon [AD-A159720] p 114 N86-18961
Prediction modeling of physiological responses and human performance in the heat [AD-A160513] p 115 N86-18965
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis [AD-A160795] p 116 N86-18972
A study of the flight environment component of aircrew fatigue in student navigators [AD-A160796] p 117 N86-18973
A comparison of dichotic listening task scoring methods [AD-A159920] p 133 N86-18980
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations [AD-A160417] p 134 N86-18982
System development and evaluation technology: State of the art of manned system measurement [AD-A160418] p 134 N86-18983
Comparison of bradycardia breath-hold on divers and nondivers: Its importance for the capacity visit of divers p 122 N86-19863
An investigation into peer and supervisor differences in the observation of performance-related behaviors [AD-A160819] p 135 N86-19898
On the analysis and design of human information processing organizations [AD-A161015] p 136 N86-19902
The influence of quality circles on attitudinal outcomes among civil engineering personnel [AD-A161152] p 136 N86-19905

HUMAN WASTES
Wet oxidation of a spacecraft model waste [SAE PAPER 851372] p 140 A86-23555
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928

HUMIDITY MEASUREMENT
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability [SAE PAPER 851374] p 140 A86-23557

HYDROGEN PRODUCTION
Static feed water electrolysis system for Space Station O2 and H2 generation [SAE PAPER 851339] p 138 A86-23526

HYDROPONICS
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936

HYPERBARIC CHAMBERS
Tissue gas bubble dynamics during hypobaric exposures [SAE PAPER 851337] p 111 A86-23525
Increased inotropi of the heart in normoxic hyperbaric atmosphere p 123 N86-19869
Hyberbaric oxygen in the treatment of Bell's palsy p 124 N86-19870
Ultrasonic detection of circulating bubbles in ewes exposed to simulated dives deeper than 800 msw under isobaric conditions and with unchanged gas mixtures p 125 N86-19882

HYPEROXIA
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
Effects of intermittent exposure to hyperoxia in operational diving p 123 N86-19868

HYPERTHERMIA
Effect of wearing chemical protective clothing in the heat on signal detection over the visual field p 145 A86-25657

HYPOBARIC ATMOSPHERES
Tissue gas bubble dynamics during hypobaric exposures [SAE PAPER 851337] p 111 A86-23525

HYPOKINESIA
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys p 106 A86-25659

I

IDENTIFYING
Overall similarity and the identification of separable-dimension stimuli - A choice model analysis p 133 A86-26296

IMAGE CONTRAST
Suprathreshold contrast perception as a function of spatial frequency p 133 A86-26295
Eye movements and spatial pattern vision [AD-A160408] p 115 N86-18963

IMAGE ENHANCEMENT
Visual form perception from halftone images p 120 N86-19847

IMAGE PROCESSING
A digital image processing facility for human factors research p 143 A86-23737

IMAGE RESOLUTION
Visual form perception from halftone images p 120 N86-19847

IMMUNITY
Potential for cross-reactive protection using peptides and adjuvants or carrier molecules [AD-A160360] p 108 N86-19826

IMMUNOLOGY
Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425
Immunomodulation by proteins of bordetella pertussis [AD-A160078] p 107 N86-18953
Molecular approaches to selective immunization [AD-A160141] p 107 N86-18954
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-001] p 109 N86-19828
Epidemiological supervision of poliomyelitis p 118 N86-19835

IMPACT ACCELERATION
Effect of seat cushions of human respone to +Gz impact p 145 A86-25652

IMPACT TESTS
Effect of seat cushions of human respone to +Gz impact p 145 A86-25652
Dynamics of head protection (impact protective comparison of the SPH-4 flight helmet to a commercial motorcycle helmet) [AD-A161164] p 154 N86-19945

INDEPENDENT VARIABLES
A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach [AD-A160850] p 134 N86-18986

INDUSTRIAL SAFETY
The absorption of benzene through human skin [AD-A161157] p 127 N86-19894

INFECTIOUS DISEASES
Clinico-epidemiological characteristics of Q fever in Carpathian foothills p 118 N86-19834

INFLUENZA
Potential for cross-reactive protection using peptides and adjuvants or carrier molecules [AD-A160360] p 108 N86-19826

INFORMATION MANAGEMENT
Subjective workload and individual differences in information processing abilities [SAE PAPER 841491] p 132 A86-26011

INFORMATION RETRIEVAL
Beyond associations: Strategic components in memory retrieval [AD-A160783] p 134 N86-18985

INHIBITORS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase [AD-A160740] p 116 N86-18969
Ultrasensitive detection of chemical substances [AD-A159996] p 108 N86-19825

INJURIES
Hematopoiesis in conventional mice after wound trauma [AD-A160436] p 108 N86-18959

INPUT
A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976
Multimodal versus unimodal information processing of words [AD-A160517] p 134 N86-18984

INSTRUMENTS
Rapid identification of micro-organisms [AD-A159945] p 107 N86-18952

INVESTIGATION
An investigation into effects of environmental changes on locus of control [AD-A160861] p 135 N86-18987

ION CONCENTRATION
Muscle fatigue: Physiological and biochemical studies p 120 N86-19851

IONIZING RADIATION
Ionizing radiation and blood vessels — Russian book p 105 A86-24144

IOWA
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] p 134 N86-18986
ISCHEMIA
Ischemic cardiopathology in pilots - The risk, the methods of detection and prevention
p 113 A86-24511
ISOMERS
Isoleucine stereoisomers on the earth
p 154 A86-26198
ISOTOPIC LABELING
A method for screening of plant species for space use
p 152 N86-19938

J

JET LAG
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis
[AD-A160795] p 116 N86-18972
JP-4 JET FUEL
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-19957
JUDGMENTS
A model of the conjunction fallacy
[AD-A160876] p 136 N86-19901

K

KIDNEYS
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field
p 103 A86-23490

L

LANDING SIMULATION
Part-training strategies in simulated carrier landing final approach training p 131 A86-23749
LASER DAMAGE
Light induced damage to erythrocyte membrane sensitized by tetrasulfophenyl porphin
p 109 N86-19838
LASER SPECTROSCOPY
Element analysis of sclerotic formations of major blood vessels by laser mass spectrometry p 118 N86-19833
LEARNING
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
LENSES
Fluorescent-polarization properties of chromophores of water-soluble proteins of normal and cataractal human lens
p 116 N86-19832
LESIONS
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900
LEUCINE
Isoleucine stereoisomers on the earth
p 154 A86-26198
LEUKOCYTES
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968
LIFE SCIENCES
Space Station life sciences guidelines for nonhuman experiment accommodation
[SAE PAPER 851370] p 104 A86-23553
The life sciences on board of Spacelab D1
p 106 A86-24610
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] p 106 N86-18949
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379] p 107 N86-18950
LIFE SUPPORT SYSTEMS
Evolution of the Shuttle Extravehicular Mobility Unit's life support system
[SAE PAPER 85-1333] p 137 A86-23522
Electrochemical CO2 concentration for the Space Station Program
[SAE PAPER 851341] p 138 A86-23528
Comparison of CO2 reduction process - Bosch and Sabatier
[SAE PAPER 851343] p 139 A86-23530
Phase change water processing for Space Station
[SAE PAPER 851346] p 139 A86-23532
Space Station nitrogen supply system based on stored chemicals
[SAE PAPER 851349] p 139 A86-23535
Space Station Environmental Control/Life Support System engineering
[SAE PAPER 851375] p 140 A86-23558
Environmental Control and Life Support Systems technology options for Space Station application
[SAE PAPER 851376] p 140 A86-23559
Potential for utilization of algal biomass for components of the diet in CELSS
[SAE PAPER 851388] p 140 A86-23567
Simulation model for plant growth in controlled environment systems
[SAE PAPER 85-1390] p 104 A86-23568
BLSS, a European approach to CELSS — Biological Life Support Systems
[SAE PAPER 851391] p 141 A86-23569
Utilization of membranes for H2O recycle system
[SAE PAPER 851394] p 141 A86-23571
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
[SAE PAPER 851397] p 104 A86-23574
Wet-oxidation waste management system for CELSS
[SAE PAPER 851398] p 141 A86-23575
Sodium and potassium recycle in closed ecosystem-space agriculture p 144 A86-25199
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] p 147 N86-18989
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives
p 124 N86-19874
Gas and water recycling system for IOC vivarium experiments p 150 N86-19920
LIGHT (VISIBLE RADIATION)
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
LIPIDS
Micellar enzymology p 109 N86-19831
LOADS (FORCES)
Your space suit and you - Significance of manloading in pressure suit design
[SAE PAPER 851334] p 137 A86-23523
LOCI
An investigation into effects of environmental changes on locus of control
[AD-A160861] p 135 N86-18987
LOCOMOTION
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324
LONG DURATION SPACE FLIGHT
Human physiological adaptation to extended Space Flight and its implications for Space Station
[SAE PAPER 851311] p 110 A86-23502
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane
[SAE PAPER 851342] p 138 A86-23529
Water quality monitor for recovered spacecraft water
[SAE PAPER 85-1347] p 139 A86-23533
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability
[SAE PAPER 851374] p 140 A86-23557
CELSS experiment model and design concept of gas recycle system
[SAE PAPER 851393] p 141 A86-23570
Metabolic aspects of the problem of stress in space flight — Russian book p 105 A86-24136
LOW PRESSURE
Can plants grow in quasi-vacuum?
p 152 N86-19931
LOW TEMPERATURE ENVIRONMENTS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
LUMINANCE
Luminance and chromaticity signal processing in the human visual system p 121 N86-19852
LUNG MORPHOLOGY
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860
LUNGS
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976
Lung rupture as a complication in free escape — from submarines p 122 N86-19862
LYMPHOCYTES
Molecular approaches to selective immunization
[AD-A160141] p 107 N86-18854
LYSOZYME
Elevations of plasma endotoxin levels and lysosomal enzyme activities in divers during a simulated chamber dive to 300 msw p 123 N86-19866

M

MAGNETIC FIELDS
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
MAGNETS
Magnets and surgical procedures p 119 N86-19841
MALES
Helicopter-referenced single control, center-position force exertion capabilities of males and females
[AD-A161234] p 154 N86-19946
MAN MACHINE SYSTEMS
Duty-cycle analysis of a human-controlled manipulator
p 137 A86-23424
The roles of astronauts and machines for future space operations
[SAE PAPER 851332] p 137 A86-23521
Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volumes 1 & 2 p 141 A86-23701
The effect of asymmetric transfer on dual-task assessment of voice technology p 141 A86-23702
A technology forecasting and assessment method for evaluating system utility and operator workload
p 142 A86-23704
A computer-based system for workstation design and analysis — for flight crews p 142 A86-23707
Eye-controlled switching for crew station design
p 142 A86-23711
The effects of redundancy, target density and practice on a complex visual search task p 142 A86-23712
Message-based screen interfaces - The effects of presentation rates and task complexity on operator performance p 143 A86-23734
Research issues in teleoperator systems
p 143 A86-23735
Human operator control of a bilateral teleoperator in part-simulation of zero gravity p 143 A86-23736
Concept flying - A method for deriving unique system requirements p 143 A86-23738
Some problems in flight mechanics with respect to flight safety p 131 A86-23772
On the pilot's behavior of detecting a system parameter change p 145 A86-25229
Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings
[SAE P-151] p 145 A86-26001
Flight deck automation decisions
[SAE PAPER 841471] p 145 A86-26002
Flight deck design methodology using computerized anthropometric models
[SAE PAPER 841472] p 146 A86-26003
AI applications to military pilot decision aiding - A perspective on transition
[SAE PAPER 841533] p 146 A86-26004
Automation in the cockpit - Who's in charge?
[SAE PAPER 841534] p 146 A86-26005
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] p 134 N86-18983
MANIPULATORS
Duty-cycle analysis of a human-controlled manipulator
p 137 A86-23424
MANNED SPACE FLIGHT
Human physiological adaptation to extended Space Flight and its implications for Space Station
[SAE PAPER 851311] p 110 A86-23502
First German Spacelab missions, no. 6
p 118 N86-18979
MANUAL CONTROL
Human operator control of a bilateral teleoperator in part-simulation of zero gravity p 143 A86-23736
MASS SPECTROSCOPY
Element analysis of sclerotic formations of major blood vessels by laser mass spectrometry p 118 N86-19833
MATHEMATICAL MODELS
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887
Simulation model for plant growth in controlled environment systems p 149 N86-19914
MEDICAL PHENOMENA
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858

MEDICAL SERVICES
Medical control of the aircrew during a retraining process p 110 A86-23494
Health maintenance and human productivity in the Space Station Era
[SAE PAPER 85-1312] p 110 A86-23503
Exhibits concerning sparing medicine at Zdravookhraneniye-85 at Moscow p 119 N86-19840

MEMBRANE STRUCTURES
Light induced damage to erythrocyte membrane sensitized by tetrasulfophenyl porphin p 109 N86-19838

MEMBRANES
Utilization of membranes for H2O recycle system
[SAE PAPER 851394] p 141 A86-23571
Utilization of membranes for H2O recycle system p 148 N86-19910

MEMORY
Beyond associations: Strategic components in memory retrieval
[AD-A160783] p 134 N86-18985
Local and global factors in learning
[AD-A161128] p 136 N86-19904

MENTAL PERFORMANCE
Why do performance and subjective workload measures dissociate? p 129 A86-23726
Personality differences as a moderator of mental workload behavior - Mental workload performance and strain reactions as a function of cognitive complexity p 130 A86-23732
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307
Dual hemispheric processing in a letter matching task p 131 A86-24325
Effect of wearing chemical protective clothing in the heat on signal detection over the visual field p 145 A86-25657
Subjective workload and individual differences in information processing abilities
[SAE PAPER 841491] p 132 A86-26011

MESOPHILES
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999

METABOLIC WASTES
Effects of NO3(-) and NH4(+) and urea on each other's uptake and incorporation p 152 N86-19933

METABOLISM
Metabolic aspects of the problem of stress in space flight --- Russian book p 105 A86-24136
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159878] p 107 N86-18851
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 118 N86-18978
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846

METHANE
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane
[SAE PAPER 851342] p 138 A86-23529
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999

METHYL ALCOHOLS
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928

MICE
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] p 106 N86-18959
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 150 N86-19824

MICROBIOLOGY
The tryptophanyl-tRNA synthetases from eurocaryotes, procaryotes, and archebacteria have a common antigenic determinant p 105 A86-24323
Characteristics of effects of microbiological means of plant protection on organism p 109 N86-19829

MICROORGANISMS
Characteristics of effects of microbiological means of plant protection on organism p 109 N86-19829
Design concepts for bioreactors in space p 151 N86-19926
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system p 151 N86-19930

MICROWAVES
Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425

MILITARY AIRCRAFT
Concept flying - A method for deriving unique system requirements p 143 A86-23738

MILITARY HELICOPTERS
Ophthalmological problems linked to helicopter flight p 112 A86-24504
Comparison of voice types for helicopter voice warning systems
[SAE PAPER 841611] p 147 A86-26030

MILITARY OPERATIONS
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982

MILLIMETER WAVES
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442

MINERALS
Wheat response to CO2 enrichment: CO2 exchanges transpiration and mineral uptakes p 152 N86-19932

MISSION PLANNING
An examination of ability requirements for various rotary wing missions p 128 A86-23716

MITOCHONDRIA
Molecular archaeology of the mitochondrial genome p 104 A86-23996

MODERATORS
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982

MODULUS OF ELASTICITY
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860

MOISTURE CONTENT
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions p 122 N86-19861

MOLECULAR BIOLOGY
Molecular archaeology of the mitochondrial genome p 104 A86-23996
Signs of life --- in molecules of Universe p 154 A86-25774
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968

MOLECULAR CLOUDS
Signs of life --- in molecules of Universe p 154 A86-25774

MOLECULAR STRUCTURE
Fluorescent-polarization properties of chromophores of water-soluble proteins of normal and cataractal human lens p 118 N86-19832

MORALE
The influence of quality circles on attitudinal outcomes among civil engineering personnel
[AD-A161152] p 136 N86-19905

MORPHINE
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900

MORPHOLOGY
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857

MOTION AFTEREFFECTS
A purely central movement aftereffect induced by binocular viewing of dynamic visual noise p 133 A86-26297
Suppression of visible persistence in apparent motion p 133 A86-26298

MOTION SICKNESS
Canadian medical experiments on Shuttle Flight 41-G p 110 A86-22996
Some psychological aspects of air sickness p 131 A86-24508
Visual distortion - The correlation model
[SAE PAPER 841585] p 114 A86-26026
The beginnings of airborne weightlessness research
[AD-A160575] p 115 N86-18966
General automatic components of motion sickness
[NASA-CR-176516] p 126 N86-19886

MOTION SICKNESS DRUGS
Arousal and stability - The effects of five new sympathomimetic drugs suggest a new principle for the prevention of space motion sickness p 113 A86-25656

MOTIVATION
Flying and danger, joy and fear --- pilot motivation and fear of flying p 131 A86-25655

MULTIVARIATE STATISTICAL ANALYSIS
A multivariate study of the relationship between the genetic code and the physical-chemical properties of amino acids p 104 A86-23997

MUSCLES
Muscle fatigue: Physiological and biochemical studies p 120 N86-19851

MUSCULAR FATIGUE
Muscle fatigue: Physiological and biochemical studies p 120 N86-19851

MUSCULAR FUNCTION
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
How does skeletal muscle effectively function both in the case of posture maintenance and twitch movements? p 105 A86-24308

MUSCULAR STRENGTH
Your space suit and you - Significance of manloading in pressure suit design
[SAE PAPER 851334] p 137 A86-23523

MUTAGENS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969

N

NARCOSIS
An attempt to counteract nitrogen narcosis by naloxone administration p 123 N86-19865

NAVIGATORS
A study of the flight environment component of aircrew fatigue in student navigators
[AD-A160796] p 117 N86-18973

NERVOUS SYSTEM
Local and global factors in learning
[AD-A161128] p 136 N86-19904

NEURAL NETS
Biological investigations of adaptive networks. Neuronal control of conditioned responding
[AD-A160345] p 126 N86-19887

NEURONS
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] p 108 N86-18958
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844

NEUROPHYSIOLOGY
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900

NEUROTRANSMITTERS
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19867
Local and global factors in learning
[AD-A161128] p 136 N86-19904

NEUTRAL GASES
Can plants grow in quasi-vacuum? p 152 N86-19931

NIGHT VISION
Ophthalmological problems linked to helicopter flight p 112 A86-24504
Night vision manual for the flight surgeon
[AD-A159720] p 114 N86-18961

NITROGEN
Space Station nitrogen supply system based on stored chemicals
[SAE PAPER 851349] p 139 A86-23535
An attempt to counteract nitrogen narcosis by naloxone administration p 123 N86-19865
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929
Can plants grow in quasi-vacuum? p 152 N86-19931

Effects of NO3(-) and NH4(+) and urea on each other's uptake and incorporation p 152 N86-19933
Nitrogen uptake and utilization by intact plants p 153 N86-19941

NITROGEN IONS
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929

NODULES
A cold thyroid nodule - Statistical data and aeronautical aptitude p 112 A86-24507

NOISE (SOUND)
Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study [AD-A160799] p 117 N86-18974
The effects of bimodal presentation of stimuli and noise on target detection [AD-A160122] p 134 N86-18981

NOISE INJURIES
Practical application of basic research on impulse noise hazard [AD-A160432] p 115 N86-18964

NOISE INTENSITY
Noise levels in cockpits of aircraft during normal cruise and considerations of auditory risk p 145 A86-25651

NORADRENALINE
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491

NOSE (ANATOMY)
Enhancement of somniferous effects of thermal pulsation by simultaneous application to two reflexogenic zones p 120 N86-19849

NUCLEAR MAGNETIC RESONANCE
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225

NUCLEATION
On the use of a bubble formation model to calculate diving tables p 114 A86-25658

NUCLEOTIDES
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfataricus and its evolutionary implications p 104 A86-23998
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants [AD-A160237] p 107 N86-18956

NUTRITIONAL REQUIREMENTS
Potential for utilization of algal biomass for components of the diet in CELSS [SAE PAPER 851388] p 140 A86-23567

O

OBSERVATION
An investigation into peer and supervisor differences in the observation of performance-related behaviors [AD-A160819] p 135 N86-19898

OPERATOR PERFORMANCE
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
A technology forecasting and assessment method for evaluating system utility and operator workload p 142 A86-23704
Use of a signal detection paradigm to assess subjective intersection points in a target location task p 129 A86-23720
Message-based screen interfaces - The effects of presentation rates and task complexity on operator performance p 143 A86-23734
Human operator control of a bilateral teleoperator in part-simulation of zero gravity p 143 A86-23736
A digital image processing facility for human factors research p 143 A86-23737
Operator loading effects in a simulated tactical decision-making problem p 130 A86-23739

OPHTHALMOLOGY
Ophthalmological problems linked to helicopter flight p 112 A86-24504
A new test of the color vision of professionals p 112 A86-24505
Night vision manual for the flight surgeon [AD-A159720] p 114 N86-18961

OPTICAL POLARIZATION
Fluorescent-polarization properties of chromophores of water soluble proteins of normal and cataractal human lens p 118 N86-19832

ORAL HYGIENE
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives p 124 N86-19874

ORBITAL SPACE STATIONS
Membrane-based water- and energy-recovery systems for the manned space station [SAE PAPER 851345] p 139 A86-23531

ORGANIC SILICON COMPOUNDS
Antistress effect of 1-chlormethylsilitrane p 105 A86-24309

ORGANIC SOLIDS
Development status of regenerable solid amine CO2 control systems [SAE PAPER 85-1340] p 138 A86-23527

ORTHOSTATIC TOLERANCE
Orthostatic tolerance of normal Indians and those with suspected abnormal cardiovascular reflex status p 114 A86-25661

OSMOSIS
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929

OTOLOGY
Recurrent serious otitis in a reconnaissance pilot - The consequences for his career p 112 A86-24506

OXIDATION
Wet oxidation of a spacecraft model waste [SAE PAPER 851372] p 140 A86-23555
Wet-oxidation waste management system for CELSS [SAE PAPER 851398] p 141 A86-23575
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
Supercritical waste oxidation of aqueous wastes p 150 N86-19922

OXYGEN BREATHING
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19867
Effects of intermittent exposure to hyperoxia in operational diving p 123 N86-19868
Hyberbaric oxygen in the treatment of Bell's palsy p 124 N86-19870
Alternatives to standard air tables — diver decompression p 125 N86-19880

OXYGEN CONSUMPTION
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853

OXYGEN METABOLISM
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853

OXYGEN PRODUCTION
Static feed water electrolysis system for Space Station O2 and H2 generation [SAE PAPER 851339] p 138 A86-23526
Environmental Control and Life Support Systems technology options for Space Station application [SAE PAPER 851376] p 140 A86-23559

OXYGEN SUPPLY EQUIPMENT
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane [SAE PAPER 851342] p 138 A86-23529

P

PALEOBIOLOGY
Isoleucine stereoisomers on the earth p 154 A86-26196

PARALYSIS
Hyberbaric oxygen in the treatment of Bell's palsy p 124 N86-19870

PATHOLOGICAL EFFECTS
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase [AD-A160740] p 116 N86-18969

PATIENTS
The clinical prediction of dangerousness [AD-A160820] p 135 N86-19899

PATROLS
Body weight changes before and after submarine patrols [AD-A161144] p 127 N86-19893

PATTERN RECOGNITION
The detection and identification of pictorial changes between successive presentations p 129 A86-23721
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294
Eye movements and spatial pattern vision [AD-A160408] p 115 N86-18963
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms [AD-A161213] p 128 N86-19895

PAYLOAD INTEGRATION PLAN
First German Spacelab missions, no. 6 p 118 N86-18979

PEPTIDES
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368
Potential for cross-reactive protection using peptides and adjuvants or carrier molecules [AD-A160360] p 108 N86-19826

PERCEPTION
A study of patient's self-image during orthodontic treatment [AD-A160751] p 126 N86-19888

PERFORMANCE TESTS
Utility of an emulation and simulation computer model for air revitalization system hardware design, development, and test [SAE PAPER 851377] p 140 A86-23560

PERIPHERAL CIRCULATION
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857

PERIPHERAL NERVOUS SYSTEM
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422

PERIPHERAL VISION
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294

PERSONALITY
An investigation into effects of environmental changes on locus of control [AD-A160861] p 135 N86-18987

PERSONALITY TESTS
Personality differences as a moderator of mental workload behavior - Mental workload performance and strain reactions as a function of cognitive complexity p 130 A86-23732

PERSONNEL
Design guidelines for carbon dioxide scrubbers, revision A [AD-A160181] p 147 N86-18989
The influence of quality circles on attitudinal outcomes among civil engineering personnel [AD-A161152] p 136 N86-19905

PERSONNEL MANAGEMENT
Evaluation of a multi-method group treatment approach for the management of stress [AD-A160813] p 135 N86-19897

PESTICIDES
Characteristics of affects of microbiological means of plant protection on organism p 109 N86-19829

PH
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918

PHARMACOLOGY
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
Physiological insights gained through zero-G medical research p 144 A86-24121
Antistress effect of 1-chlormethylsilitrane p 105 A86-24309

PHASE CONTRAST
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294

PHASE DEVIATION
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294

PHASE SHIFT
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294

PHASE TRANSFORMATIONS
Phase change water processing for Space Station [SAE PAPER 851346] p 139 A86-23532

PHOTOSENSITIVITY
Light induced damage to erythrocyte membrane sensitized by tetrasulfophenyl porphin p 109 N86-19838

PHOTOSYNTHESIS
CELSS science needs p 151 N86-19925
Application of photosynthetic N2-fixing cyanobacteria to the CELSS program p 151 N86-19929
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936

PHOTOVOLTAIC CONVERSION
An engineering analysis of a closed cycle plant growth module p 150 N86-19919

PHYSICAL EXERCISE
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853

PHYSICAL FITNESS
Factors which alter human physiological responses during exercise-heat acclimation [AD-A160580] p 115 N86-18967

Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982
Helicopter-referenced single control, center-position force exertion capabilities of males and females
[AD-A161234] p 154 N86-19946

PHYSICAL PROPERTIES
A multivariate study of the relationship between the genetic code and the physical-chemical properties of amino acids p 104 A86-23997

PHYSIOLOGICAL DEFENSES
Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425

PHYSIOLOGICAL EFFECTS
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368
Mechanical solid vibrations p 113 A86-24512
Arousal and stability - The effects of five new sympathomimetic drugs suggest a new principle for the prevention of space motion sickness p 113 A86-25656
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys p 106 A86-25659
Thymic involution in the suspended rat - Adrenal hypertrophy and glucocorticoid receptor content p 106 A86-25660
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
[FOA-C-50021-H1] p 121 N86-19854
The effects of the insulation properties of different dry suit systems on the diver's heat balance and comfort during diving to 50 m p 121 N86-19856
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871
An appraisal of dive profiles in shellfish divers with reference to the risk of decompression sickness p 125 N86-19879
Less bubble formation in women divers p 126 N86-19883

PHYSIOLOGICAL FACTORS
Clinical and psychological surveillance of student pilots at the beginning of training p 111 A86-24501
The beginnings of airborne weightlessness research
[AD-A160575] p 115 N86-18966

PHYSIOLOGICAL RESPONSES
Human physiological adaptation to extended Space Flight and its implications for Space Station
[SAE PAPER 851311] p 110 A86-23502
Physiological considerations for EVA in the Space Station era
[SAE PAPER 851313] p 111 A86-23504
Effect of seat cushions of human respone to +Gz impact p 145 A86-25652
Orthostatic tolerance of normal Indians and those with suspected abnormal cardiovascular reflex status p 114 A86-25661
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] p 115 N86-18965
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] p 115 N86-18967
Thermovisual indicators of brain response to visual stimuli p 119 N86-19843
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
General automatic components of motion sickness
[NASA-CR-176516] p 126 N86-19886
Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology
[AD-A160821] p 136 N86-19900

PHYSIOLOGY
Physiological insights gained through zero-G medical research p 144 A86-24121
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911

PILOT ERROR
Some problems in flight mechanics with respect to flight safety p 131 A86-23772
Winging it in the 1980's - Why guidelines are needed for cockpit automation
[SAE PAPER 841634] p 147 A86-26022
Preparing for the unexpected - A psychologist's case for improved training p 132 A86-26033

PILOT PERFORMANCE
Medical control of the aircrew during a retraining process p 110 A86-23494
The effect of asymmetric transfer on dual-task assessment of voice technology p 141 A86-23702
The effects of simulator and aircraft motion on eye scan behavior p 128 A86-23709
An evaluation of aviator training ability requirements scale ratings p 128 A86-23715
An examination of ability requirements for various rotary wing missions p 128 A86-23716
Retention of helicopter flight skills - Is there a 'critical period' for proficiency loss? p 129 A86-23718
Concept flying - A method for deriving unique system requirements p 143 A86-23738
Inflight evaluation of four measures of pilot workload p 130 A86-23745
The use of reflective SWAT for workload assessment --- Subjective Workload Assessment Technique p 144 A86-23747
Clinical and psychological surveillance of student pilots at the beginning of training p 111 A86-24501
Clinical problems encountered by a squadron flight surgeon p 112 A86-24502
Clinical problems posed by the medical surveillance of pilots exposed to high levels of acceleration p 112 A86-24503
Ophthalmological problems linked to helicopter flight p 112 A86-24504
A new test of the color vision of professionals p 112 A86-24505
Recurrent serious otitis in a reconnaissance pilot - The consequences for his career p 112 A86-24506
A cold thyroid nodule - Statistical data and aeronautical aptitude p 112 A86-24507
Some psychological aspects of air sickness p 131 A86-24508
Gastric and duodenal ulcers and the flight fitness of pilots p 113 A86-24509
On the pilot's behavior of detecting a system parameter change p 145 A86-25229
Proteinuria in fighter pilots after high +Gz exposure p 113 A86-25653
Flying and danger, joy and fear --- pilot motivation and fear of flying p 131 A86-25655
Flight deck automation decisions
[SAE PAPER 841471] p 145 A86-26002
Flight deck design methodology using computerized anthropometric models
[SAE PAPER 841472] p 146 A86-26003
AI applications to military pilot decision aiding - A perspective on transition
[SAE PAPER 841533] p 146 A86-26004
Automation in the cockpit - Who's in charge?
[SAE PAPER 841534] p 146 A86-26005
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009
Subjective workload and individual differences in information processing abilities
[SAE PAPER 841491] p 132 A86-26011
A review of pilot workload measurement techniques used on the A-10 single seat night attack test program
[SAE PAPER 841492] p 146 A86-26016
Advanced fighter technology integration (AFTI) F-16 - The pilot interface
[SAE PAPER 841633] p 146 A86-26018
Effects of digital altimetry on pilot workload
[SAE PAPER 841489] p 132 A86-26019
The decision to fly --- by aircraft pilots
[SAE PAPER 841613] p 132 A86-26024
An analysis of visual tasks in helicopter shipboard landing
[AD-A161101] p 136 N86-19903

PILOT SELECTION
An examination of ability requirements for various rotary wing missions p 128 A86-23716
Productivity and difficulty as new criteria for validating aviator selection tests p 128 A86-23717

PILOT TRAINING
Medical control of the aircrew during a retraining process p 110 A86-23494
An evaluation of aviator training ability requirements scale ratings p 128 A86-23715
Conserving instructional training resources through use of the personalized system of instruction p 129 A86-23719
The optimum presentation of cognitive training during a flight training program p 130 A86-23731
The use of accident statistics to influence simulator design p 144 A86-23744
Part-training strategies in simulated carrier landing final approach training p 131 A86-23749
Some problems in flight mechanics with respect to flight safety p 131 A86-23772
Clinical and psychological surveillance of student pilots at the beginning of training p 111 A86-24501
The training and certification of the general aviation pilot
[SAE PAPER 841468] p 132 A86-26013
Preparing for the unexpected - A psychologist's case for improved training p 132 A86-26033

PILOTS
Development of an automated anthropometric data measurement system (AADMS) p 144 A86-23748

PILOTS (PERSONNEL)
Assessing the health risks of carrier landings in US Navy pilots
[AD-A160928] p 127 N86-19891

PLANT ROOTS
Nitrogen uptake and utilization by intact plants p 153 N86-19941

PLANTS (BOTANY)
Simulation model for plant growth in controlled environment systems
[SAE PAPER 85-1390] p 104 A86-23568
The C23A system, an example of quantitative control of plant growth associated with a data base
[SAE PAPER 851395] p 104 A86-23572
Controlled Ecological Life Support Systems: CELSS 1985 Workshop
[NASA-TM-88215] p 148 N86-19906
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
Simulation model for plant growth in controlled environment systems p 149 N86-19914
Plan for CELSS test bed project p 149 N86-19915
Plant growth chamber M design p 149 N86-19916
Operational development of small plant growth systems p 149 N86-19917
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918
An engineering analysis of a closed cycle plant growth module p 150 N86-19919
CELSS science needs p 151 N86-19925
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936
Closed culture plant studies: Implications for CELSS p 152 N86-19937
A method for screening of plant species for space use p 152 N86-19938
Nitrogen uptake and utilization by intact plants p 153 N86-19941
The role of plant disease in the development of controlled ecological life support systems p 153 N86-19942

PLATELETS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970

POLIOMYELITIS
Epidemiological supervision of poliomyelitis p 118 N86-19835

POLYMORPHISM
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N86-18956

PORPHYRINS
Light induced damage to erythrocyte membrane sensitized by tetrasulfophenyl porphin p 109 N86-19838

POSITION (LOCATION)
Duty-cycle analysis of a human-controlled manipulator p 137 A86-23424

POSTURE
How does skeletal muscle effectively function both in the case of posture maintenance and twitch movements? p 105 A86-24308
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859

POTASSIUM
Sodium and potassium recycle in closed ecosystem-space agriculture p 144 A86-25199

POTATOES
Utilization of potatoes in CELSS: Productivity and growing systems p 152 N86-19935
Potato leaf explants as a spaceflight plant test system p 153 N86-19939

PREDICTION ANALYSIS TECHNIQUES
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] p 115 N86-18965
A comparison of dichotic listening task scoring methods
[AD-A159920] p 133 N86-18980
A model of the conjunction fallacy
[AD-A160876] p 136 N86-19901

PREDICTIONS
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899

PRESSURE BREATHING
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions p 122 N86-19861
Comparison of bradycardia breath-hold on divers and nondivers: Its importance for the capacity visit of divers p 122 N86-19863

PRESSURE DISTRIBUTION
Your space suit and you - Significance of manloading in pressure suit design
[SAE PAPER 851334] p 137 A86-23523

PRESSURE EFFECTS
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure --- divers p 121 N86-19857
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859
Increased inotropism of the heart in normoxic hyperbaric atmosphere p 123 N86-19869

PRESSURE GAGES
Wet chamber dives to test algorithms for electronic decompressiometers p 125 N86-19878

PRESSURE MEASUREMENT
Wet chamber dives to test algorithms for electronic decompressiometers p 125 N86-19878

PRESSURE REDUCTION
Repetitive decompression tables for no-stop excursions from saturation --- underwater habitats p 125 N86-19876

PRESSURE SUITS
Minimum pressure for a zero-prebreathe pressure suit
[SAE PAPER 851315] p 137 A86-23505
Servo operated anti-G suit pressurization system
[AD-D011932] p 147 N86-18988
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
The effects of the insulation properties of different dry suit systems on the diver's heat balance and comfort during diving to 50 m p 121 N86-19856

PRESSURIZED CABINS
Space Station nitrogen supply system based on stored chemicals
[SAE PAPER 851349] p 139 A86-23535

PRISMS
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324

PROBABILITY THEORY
A model of the conjunction fallacy
[AD-A160876] p 136 N86-19901

PRODUCTIVITY
Productivity and difficulty as new criteria for validating aviator selection tests p 128 A86-23717
An analysis of the productivity of a CELSS continuous algal culture system p 151 N86-19927
Studies on maximum yield of wheat for the controlled environments of space p 152 N86-19934
Nitrogen uptake and utilization by intact plants p 153 N86-19941

PROJECT MANAGEMENT
First German Spacelab [illegible] p 118 N86-18979

PROPHYLAXIS
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives p 124 N86-19874

PROPRIOCEPTION
Canadian medical experiments on Shuttle Flight 41-G p 110 A86-22996

PROTECTIVE CLOTHING
Effect of wearing chemical protective clothing in the heat on signal detection over the visual field p 145 A86-25657
Refurbishing spray on aluminum enamel on proximity clothing
[AD-A159707] p 153 N86-19944

PROTEIN METABOLISM
Proteinuria in fighter pilots after high +Gz exposure p 113 A86-25653

PROTEIN SYNTHESIS
The tryptophanyl-tRNA synthetases from eurocaryotes, procaryotes, and archebacteria have a common antigenic determinant p 105 A86-24323

PROTEINS
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N86-18956
DNA and protein studies of HLA class 2 molecules: Their relationship to T cell recognition
[AD-A160704] p 116 N86-18968
Fluorescent-polarization properties of chromophores of water-soluble proteins of normal and cataractal human lens p 119 N86-19832
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907

PROVING
Productivity and difficulty as new criteria for validating aviator selection tests p 128 A86-23717
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] p 134 N86-18986

PSEUDOMONAS
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858

PSYCHIATRY
The flight surgeon and psychiatry - Interest and skills p 131 A86-25654
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899

PSYCHOLOGICAL FACTORS
Why do performance and subjective workload measures dissociate? p 129 A86-23726
Clinical and psychological surveillance of student pilots at the beginning of training p 111 A86-24501
Some psychological aspects of air sickness p 131 A86-24508
Flying and danger, joy and fear --- pilot motivation and fear of flying p 131 A86-25655
Subjective workload and individual differences in information processing abilities
[SAE PAPER 841491] p 132 A86-26011
Evaluation of a multi-method group treatment approach for the management of stress
[AD-A160813] p 135 N86-19897
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899

PSYCHOLOGICAL TESTS
Productivity and difficulty as new criteria for validating aviator selection tests p 128 A86-23717
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] p 134 N86-18986
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899

PSYCHOLOGY
A study of patient's self-image during orthodontic treatment
[AD-A160751] p 126 N86-19888
The clinical prediction of dangerousness
[AD-A160820] p 135 N86-19899

PSYCHOMETRICS
A review of pilot workload measurement techniques used on the A-10 single seat night attack test program
[SAE PAPER 841492] p 146 A86-26016

PSYCHOMOTOR PERFORMANCE
On the pilot's behavior of detecting a system parameter change p 145 A86-25229

PSYCHOPHARMACOLOGY
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368

PSYCHOPHYSICS
Does location cueing increase the efficiency of the early stages of perceptual processing? p 129 A86-23722
The effects of aerial perspective on altitude estimation p 130 A86-23730

PSYCHOPHYSIOLOGY
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307

PSYCHOTROPIC DRUGS
Antistress effect of 1-chlormethylsiletrane p 105 A86-24309

PULMONARY FUNCTIONS
Mathematical models of the effect of gravitation on lung functions --- Russian book p 111 A86-24135
Respiratory function in inhabitants of northeastern USSR p 119 N86-19845
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions p 122 N86-19861

PULMONARY LESIONS
Lung rupture as a complication in free escape --- from submarines p 122 N86-19862

PYROLYSIS
Initial development and performance evaluation of a process for formation of dense carbon by pyrolysis of methane
[SAE PAPER 851342] p 138 A86-23529

Q

QUALITY CONTROL
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms
[AD-A161213] p 128 N86-19895

R

RADAR
The effects of bimodal presentation of stimuli and noise on target detection
[AD-A160122] p 134 N86-18981

RADAR IMAGERY
Color coding of synthetic aperture radar imagery p 142 A86-23713

RADIATION DAMAGE
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field p 103 A86-23490
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424

RADIATION DOSAGE
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975

RADIATION EFFECTS
Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425
Absorption of millimeter waves by human beings and its biological implications p 111 A86-24442
Covalent crosslinks between filaments in DNA induced by laser p 109 N86-19839

RADIATION HAZARDS
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975

RADIATION INJURIES
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423

RADIATION TOLERANCE
A proposal for a longitudinal study to assess the hazards of radiation in space flight
[AD-A160801] p 117 N86-18975

RADIOACTIVE ISOTOPES
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 118 N86-18978

RADIOACTIVITY
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] p 107 N86-18951

RADIOBIOLOGY
Ionizing radiation and blood vessels --- Russian book p 105 A86-24144
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424

Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425
Metabolism of T-2 mycotoxin by cultured cells [AD-A159678] p 107 N86-18951

RADIOPATHOLOGY
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field p 103 A86-23490

RANDOM NOISE
A purely central movement aftereffect induced by binocular viewing of dynamic visual noise p 133 A86-26297

RARE GASES
Tissue gas bubble dynamics during hypobaric exposures [SAE PAPER 851337] p 111 A86-23525

RATES (PER TIME)
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations [AD-A160417] p 134 N86-18982

RATS
Increased inotropi of the heart in normoxic hyperbaric atmosphere p 123 N86-19869
Effect of low and high environmental temperatures on decompression sickness in the aging rat p 126 N86-19884

REACTION KINETICS
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man [DE86-000317] p 118 N86-18978

REACTION TIME
On the pilot's behavior of detecting a system parameter change p 145 A86-25229
Simple and choice reaction time in a secondary task under varied stimulus modality probabilities [AD-A159698] p 135 N86-19896

REACTIVITY
Investigation of reactogenic and antigenic activity of chromatographically purified, concentrated and inactivated dry vaccine against tick borne encephalitis p 119 N86-19837

RECOGNITION
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844

RECYCLING
CELSS experiment model and design concept of gas recycle system [SAE PAPER 851393] p 141 A86-23570
Utilization of membranes for H2O recycle system [SAE PAPER 851394] p 141 A86-23571
CELSS experiment model and design concept of gas recycle system p 148 N86-19909
Utilization of membranes for H2O recycle system p 148 N86-19910
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912
Plan for CELSS test bed project p 149 N86-19915
Gas and water recycling system for IOC vivarium experiments p 150 N86-19920
Water recycling system using thermopervaporation method p 150 N86-19921
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 150 N86-19924

REDUCED GRAVITY
Potato leaf explants as a spaceflight plant test system p 153 N86-19939

REDUCTION (CHEMISTRY)
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225
Comparison of CO2 reduction process - Bosch and Sabatier [SAE PAPER 851343] p 139 A86-23530

REDUNDANCY
The effects of redundancy, target density and practice on a complex visual search task p 142 A86-23712

REFLECTANCE
Refurbishing spray on aluminum enamel on proximity clothing [AD-A159707] p 153 N86-19944

REFLEXES
Enhancement of somniferous effects of thermal pulsation by simultaneous application to two reflexogenic zones p 120 N86-19849

REGENERATION (ENGINEERING)
Static feed water electrolysis system for Space Station O2 and H2 generation [SAE PAPER 851339] p 138 A86-23526

REGENERATION (PHYSIOLOGY)
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422

REMOTE CONTROL
Research issues in teleoperator systems p 143 A86-23735

REMOTE MANIPULATOR SYSTEM
Human operator control of a bilateral teleoperator in part-simulation of zero gravity p 143 A86-23736

RESEARCH AND DEVELOPMENT
Development status of regenerable solid amine CO2 control systems [SAE PAPER 85-1340] p 138 A86-23527
Utility of an emulation and simulation computer model for air revitalization system hardware design, development, and test [SAE PAPER 851377] p 140 A86-23560
Advanced technology - New fixes or new problems? --- for helicopter voice warning systems p 147 A86-26031

RESPIRATION
A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853

RESPIRATORY DISEASES
Respiratory function in inhabitants of northeastern USSR p 119 N86-19845

RESPIRATORY PHYSIOLOGY
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier p 103 A86-23492
Mathematical models of the effect of gravitation on lung functions --- Russian book p 111 A86-24135
Comparison of bradycardia breath-hold on divers and nondivers: its importance for the capacity visit of divers p 122 N86-19863

RESPIRATORY SYSTEM
Respiratory function in inhabitants of northeastern USSR p 119 N86-19845

RESPONSES
Simple and choice reaction time in a secondary task under varied stimulus modality probabilities [AD-A159698] p 135 N86-19896

REST
Resting metabolic rate in men following prolonged treadmill exercise p 121 N86-19853

RETENTION (PSYCHOLOGY)
